

---

## ACKNOWLEDGEMENTS

The University would like to thank many individuals and groups for their assistance with various aspects of this project. First, the University thanks the employees of PADEP for their support of this project. In particular, thanks go to:

### PADEP Bureau of Mining Programs

- Greg Shuler, Geologist, for his tireless efforts in administering the Act 54 contract, assistance in data collection, and for compiling PADEP's technical review of this report
- Tom Callaghan, Director of the Bureau of Mining Programs, and Keith Brady, Mineral Resource Program Manager (retired), for their oversight and review of this report

### PADEP California District Mining Office

- William Plassio, the District Mining Manager during the University's data collection phase, for permitting staff to assist the University in data collection
- Greg Prentice, Compliance Manager, Richard Kormanik, Surface Subsidence Agent Supervisor, and Matt Cavanaugh, Mining Resource Program Specialist, for their help in collecting, interpreting, and reviewing data in the office files
- Surface Subsidence Agents Benjamin Dillie, Anne Hong, Joseph Laslo, and Dan Miles (retired) for arranging field trips for the University to observe impacted and restored features and for sharing their first-hand knowledge of the compliance process.
- Water Pollution Biologists Joel Folman and Stephen Leitkam for training and assessing University personnel in stream sampling techniques
- Greg Ohler, Clerk, for pulling files for the University and assisting with data collection

### PADEP Bureau of Point and Nonpoint Source Management

- Dan Bogar, Water Pollution Biologist II (retired), for verification of the University's macroinvertebrate identification

For several mines, the University directly requested digital data from the mine companies. The companies generously supplied AutoCAD or ArcGIS files containing data that had accompanied mine permits to PADEP. The data included precise mining extents and the spatial locations of undermined structures and water supplies. The University thanks the following companies for supplying digital data:

- Consol Energy, Inc.
- Alpha Natural Resources, Inc.
- Mepco Intermediate Holdings, LLC
- Rosebud Mining Co.

From Consol Energy, Inc, the University specifically thanks Joshua Silvis, Manager of Hydrogeology, and Brian Benson, Supervisor of Stream Mitigation, for providing a field trip for the University and students to examine stream impacts and associated mitigation efforts.

Thanks also go to individuals at various organizations around the Pittsburgh area. The University thanks Dr. Timothy Pearce at the Carnegie Museum of Natural History for assistance in identifying mollusk macroinvertebrates. The University thanks Christopher Tracey at Western Pennsylvania Conservancy for sharing his advice and thoughts regarding the effects of land use on stream biota. The University also thanks Jared Pritts, Senior Regulatory Specialist with the U.S. Army Corps of Engineers, Pittsburgh District, for providing information on wetland replacement guidelines.

Lastly, the University thanks a number of people and groups at the University of Pittsburgh whose support was critical to the completion of this project:

- Dr. Paula Grabowski, Chair of the Department of Biological Sciences, Dr.'s Mark Abbott and William Harbert, Chairs of the Department of Geology and Planetary Sciences during preparation of this report, and Dr. Radisav Vidic, Chair of the Department of Civil and Environmental Engineering, for their support of this project
- Lorrie Robbins, Director of the Department of Biological Sciences Central Administration, for her assistance with contractual and budgetary processes
- The Mascaro Center for Sustainable Innovation for support to Robert Wallace (Bevier Scholar) and Angela Anderson (Heinz Endowment Scholar)
- The Department of Biological Sciences for support to Grace Noble (Graduating Senior Fellow) and Kaitlin Piper (HHMI fellow)
