

6/12/17 Atlantic Sunrise pipeline DEP testimony; Lancaster PA

GOOD EVENING

DOUGLASS HENRY

I am DH President of **HMP** A Sustainable packaging company headquartered in Lebanon PA with plants and facilities in SC and the UK

Earned our credentials 53 years ago long before the biodegradable / recyclable / reusable Compostable terminology was invented because our principle raw material feedstock has been 100% waste paper for our entire history. *Environmental stewardship is our core value*

For most of that past, the natural gas required in the manufacturing process has been sourced from the Louisiana Gulf and Texas.

The delivery distance was long and expensive.

For the last several years the flow was reversed and the gas is now sourced from our own backyard in the Marcellus and Utica Shale formation with a fraction of the journey.

This has been a pivotal contribution to the creation of jobs and company growth for numerous manufacturers. *We are more competitive domestically and internationally as a result.*

It cannot continue without improved pipeline access to get the gas into our homes and factories.

Pennsylvania DEP must approve the Chapter 102 & 105 permits to enable the Atlantic Sunrise Project to Begin construction in July.

Williams knows how to do this safely while using best environmental practices. After all, they have been in the pipeline business for decades and they handle approximately 30% of the Countries' gas.

Pennsylvania is blessed with the biggest, lowest cost natural gas supply in the world.

Atlantic sunrise will make a key contribution to America's energy independence.

Williams Atlantic Sunrise Benefits

- \$3 billion investment in Pennsylvania
- Approximately 8,000 Direct & Indirect jobs during project
- Enable the USA to utilize and benefit from the lowest cost, Largest resource supply in the world.
- We can contribute to America's improved geopolitical position through energy independence.
