		GENERAL INFORMATION
1.	Applicant Name(s): T	ranscontinental Gas Pipe Line Company, LLC
2.	Appl. Type: New	☐ Renewal ☐ Major Amendment ☐ Minor Amendment ☐ Permit No. PA ESG830021002-00
3.	Project Description:	Transco, indirectly owned by The Williams Companies, Inc. (Williams), is seeking authorization from the Federal Energy Regulatory Commission (FERC or Commission) under Section 7(c) of the Natural Gas Act and Part 157 of the Commission's regulations, to construct, own, operate, and maintain the proposed Project facilities
		The Project is an expansion of Transco's existing natural gas transmission system that will enable Transco to provide an incremental 829,400 dekatherms per day (Dth/d) of year-round firm transportation capacity from the Marcellus Shale production area in northeastern Pennsylvania (PA) to multiple delivery points along Transco's Leidy Line in PA, Transco's mainline at the Station 210 Zone 6 Pooling Point in Mercer County, New Jersey (NJ) and multiple delivery points in Transco's Zone 6 in NJ, PA, and Maryland (MD). The Project will consist of the following components:
		•Approximately 22.3 miles of 30-inch-diameter pipeline partially collocated with Transco's Leidy Line A from milepost (MP) 0.00 to MP 22.32 in Luzerne County, PA (Regional Energy Lateral);
		• Approximately 13.8 miles of 42-inch-diameter pipeline collocated with Transco's Leidy Line System from
		MP 43.72 to MP 57.50 in Monroe County, PA (Effort Loop);
		 New gas-fired turbine driven compressor station identified as Compressor Station 201 with
		11,107 nominal horsepower (HP) at International Organization of Standardization (ISO) conditions in Gloucester County, NJ;
		• Addition of two gas-fired turbine driven compressor units with 31,800 nominal HP at ISO conditions at
		existing Compressor Station 505 in Somerset County, NJ, to accommodate the abandonment and replacement of approximately 16,000 HP from eight existing internal combustion enginedriven compressor units and increase the certificated station compression by 15,800 HP;
		 Addition of two gas-fired turbine driven compressor units with 63,742 nominal HP at ISO conditions and
		modification of three existing compressors at existing Compressor Station 515 in Luzerne County, PA to support the Project and to accommodate the abandonment and replacement of approximately 17,000 HP from five existing gas-fired reciprocating engine driven compressors and increase the certificated station compression by 46,742 HP;
		Uprate and rewheel two existing electric motor-driven compressor units at existing
		Compressor Station 195 in York County, PA to increase the certificated station compression by 5,000 HP and accommodate the abandonment of two existing gas-fired reciprocating

		ngine driven compressors which total	•	-	ion;

16. Describe the procedures that will be taken to ensure that recycling or disposal of materials associated with or from the project site will be conducted properly.

The restoration of the pipeline right-of-way will require the removal of the temporary materials. The temporary materials include, but may not be limited to, stone surfaces and associated geotextiles. The contractors are required to dispose of the materials at suitable disposal or recycling sites and in compliance with local, state and federal regulations.

Contractors are required to inventory and manage their construction site materials. The goal is to be aware of the materials on-site, ensure they are properly maintained, used, and disposed of, and to make sure the materials are not exposed to stormwater. The following materials or substances are expected to be present on-site during construction (Note: this list is not an all-inclusive list and the materials management plan can be modified to address additional materials used on-site):

- Acids
- Detergents
- Fertilizers (nitrogen/phosphorus)
- · Hydroseeding mixtures
- Petroleum based products
- Sanitary wastes
- · Soil stabilization additives
- Solder
- Solvents

These materials must be stored as appropriate and shall not contact storm or non-stormwater discharges. Contractor shall provide a weatherproof container to store chemicals or erodible substances that must be kept on the site. Contractor is responsible for reading, maintaining, and making employees and subcontractors aware of Safety Data Sheets (SDSs).

17. Identify the presence of any naturally occurring geologic formations or soil conditions that may have the potential to cause pollution during earth disturbance activities. If such formations or conditions exist, identify BMPs that will be implemented to avoid or minimize potential pollution.

See Section 4.2 of the E&SC/SR Plan Narratives for specific information pertaining to each project component.

18. Identify whether the potential exists for thermal impacts to surface waters from the earth disturbance activity. If such potential exists, identify BMPs that will be implemented to avoid, minimize, or mitigate potential thermal impacts.

See Section 8.0 of the E&SC/SR Plan Narratives for specific information pertaining to each project component.

19. 🛛 The E&S	19. 🔲 The E&S Plan has been planned, designed, and will be implemented to be consistent with the PCSM Plan.									
	20. If applicable, identify existing and proposed riparian forest buffers on E&S and PCSM Plan Drawings and identify the Drawing No(s) below (select N/A if not applicable).

COMMONWEALTH OF PENNSYLVANIA DEPARTMENT OF ENVIRONMENTAL PROTECTION BUREAU OF CLEAN WATER

NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM (NPDES) DISCHARGES OF STORMWATER ASSOCIATED WITH CONSTRUCTION ACTIVITIES POST-CONSTRUCTION STORMWATER MANAGEMENT (PCSM) MODULE 2

Applicant:	Transcon Company	ntinental Gas Pipe Line /, LLC	Project Site Name:	Regional Energy Access Expansion Project - MLV-515RA20						
Surface Wat	er Name(s)	: Mill Creek	Surface Water Use(s): HQ-CWF,MF – Existing CWF, MF - Designated							
		PCSM PLA	N INFORMATION							
1. Identify	all structura	I and non-structural PCSM BMPs tha	at have been selected a	and provide th	ne information red	quested.				
Discharge Point(s)	BMP BMP Name		BMP Manual	Latitude	Longitude	DA Treated (ac)				
001	1	Infiltration Berm & Retentive Gradin	g BMP 6.4.10	N41° 15' 11.16"	W75° 45' 31.68"	0.38				
Undetained	Areas:	0.18 acre(s)								
☐ The Proj	ect Qualifie	s as a Site Restoration Project (25 P	a. Code §102.8(n))							
2. Describe	the seque	ence of PCSM BMP implementation	on in relation to earth	disturbance	activities and a	schedule of				

inspections for the critical stages of PCSM BMP installation.

	See Section 6.1 of the PCSM Plan Narratives for specific sequences and critical stage inspections for each PCSM BMP area.
3.	☑ Plan drawings have been developed for the project and will be available on-site.
4.	☐ Plan drawings have been developed for the project and are attached to the NOI/application.
5.	Recycling and proper disposal of materials associated with PCSM BMPs are addressed as part of long-term operation and maintenance of the PCSM BMPs.
6.	Identify naturally occurring geologic formations or soil conditions that may have the potential to cause pollution after earth disturbance activities are completed and PCSM BMPs are operational and the applicant's plan to avoid or minimize potential pollution and its impacts.
	See Section 4.0 of the PCSM Plan Narrative.
7.	Identify whether the potential exists for thermal impacts to surface waters from post-construction stormwater. If such potential exists, identify BMPs that will be implemented to avoid, minimize, or mitigate potential thermal impacts.
	Thermal impacts to surface waters are not anticipated. Most of the stormwater will be routed through the stormwater BMP designed to retain and infiltrate the first surge of water from the site. The first surge of water will be the warmest water for the duration of the storm event and will quickly cool as the storm event progresses. The BMPs are designed to capture and infiltrate this warmest surge of stormwater. Based on routing calculations, stormwater is retained in the BMPs for a period of 12 hours before being discharged during a 100-year/24-hour storm event. This retention period is longer for less intense storms. Therefore, as a result of these measures, no significant thermal impact to the receiving waters is anticipated.
8.	☐ The PCSM Plan has been planned, designed, and will be implemented to be consistent with the E&S Plan.
9.

Undetained	Areas:	0.49 acre(s)				<u>I</u>			
☐ The Proj	ect Qualifi	ies as a Site Restoration Project (25 Pa	n. Code §102.8(n))						
2. Describe	the seq	uence of PCSM BMP implementation	n in relation to ear	th disturbance	activities and a	schedule of			

	See Section 6.0 of the PCSM Plan Narratives for specific sequences and critical stage inspections for each PCSM BMP area.
3.	☐ Plan drawings have been developed for the project and will be available on-site.
4.	☐ Plan drawings have been developed for the project and are attached to the NOI/application.
5.	Recycling and proper disposal of materials associated with PCSM BMPs are addressed as part of long-term operation and maintenance of the PCSM BMPs.
6.	Identify naturally occurring geologic formations or soil conditions that may have the potential to cause pollution after earth disturbance activities are completed and PCSM BMPs are operational and the applicant's plan to avoid or minimize potential pollution and its impacts.
	See Section 4.0 of the PCSM Plan Narrative.
7.	Identify whether the potential exists for thermal impacts to surface waters from post-construction stormwater. If such potential exists, identify BMPs that will be implemented to avoid, minimize, or mitigate potential thermal impacts.
	Thermal impacts to surface waters are not anticipated. Most of the stormwater will be routed through the stormwater BMP designed to retain and infiltrate the first surge of water from the site. The first surge of water will be the warmest water for the duration of the storm event and will quickly cool as the storm event progresses. The BMPs are designed to capture and infiltrate this warmest surge of stormwater. Based on routing calculations, stormwater is retained in the BMPs for a period of 12 hours before being discharged during a 100-year/24-hour storm event. This retention period is longer for less intense storms. Therefore, as a result of these measures, no significant thermal impact to the receiving waters is anticipated.
8.	☐ The PCSM Plan has been planned, designed, and will be implemented to be consistent with the E&S Plan.
9.

5.	Recycling and proper disposal of materials associated with PCSM BMPs are addressed as part of long-term operation and maintenance of the PCSM BMPs.
6.	Identify naturally occurring geologic formations or soil conditions that may have the potential to cause pollution after earth disturbance activities are completed and PCSM BMPs are operational and the applicant's plan to avoid or minimize potential pollution and its impacts.
	See Section 4.0 of the PCSM Plan Narrative.
7.	Identify whether the potential exists for thermal impacts to surface waters from post-construction stormwater. If such potential exists, identify BMPs that will be implemented to avoid, minimize, or mitigate potential thermal impacts.
	Thermal impacts to surface waters are not anticipated. Most of the stormwater will be routed through the stormwater BMP designed to retain and infiltrate the first surge of water from the site. The first surge of water will be the warmest water for the duration of the storm event and will quickly cool as the storm event progresses. The BMPs are designed to capture and infiltrate this warmest surge of stormwater. Based on routing calculations, stormwater is retained in the BMPs for a period of 12 hours before being discharged during a 100-year/24-hour storm event. This retention period is longer for less intense storms. Therefore, as a result of these measures, no significant thermal impact to the receiving waters is anticipated.
8.	☐ The PCSM Plan has been planned, designed, and will be implemented to be consistent with the E&S Plan.

Undetained	Areas:	acre(s)					
☐ The Proje	ect Qualifie	es as a Site Restoration Project (25 Pa.	Code §102.8(n))				

Describe the sequence of PCSM BMP implementation in relation to earth disturbance activities and a schedule of

	See Section 6.0 of the PCSM Plan Narratives for specific sequences and critical stage inspections for each PCSM BMP area.
3.	☑ Plan drawings have been developed for the project and will be available on-site.
4.	☐ Plan drawings have been developed for the project and are attached to the NOI/application.
5.	Recycling and proper disposal of materials associated with PCSM BMPs are addressed as part of long-term operation and maintenance of the PCSM BMPs.
6.	Identify naturally occurring geologic formations or soil conditions that may have the potential to cause pollution after earth disturbance activities are completed and PCSM BMPs are operational and the applicant's plan to avoid or minimize potential pollution and its impacts.
	See Section 4.0 of the PCSM Plan Narrative.
7.	Identify whether the potential exists for thermal impacts to surface waters from post-construction stormwater. If such potential exists, identify BMPs that will be implemented to avoid, minimize, or mitigate potential thermal impacts.
	Thermal impacts to surface waters are not anticipated. Most of the stormwater will be routed through the stormwater BMP designed to retain and infiltrate the first surge of water from the site. The first surge of water will be the warmest water for the duration of the storm event and will quickly cool as the storm event progresses. The BMPs are designed to capture and infiltrate this warmest surge of stormwater. Based on routing calculations, stormwater is retained in the BMPs for a period of 11 hours before being discharged during a 100-year/24-hour storm event. This retention period is longer for less intense storms. Therefore, as a result of these measures, no significant thermal impact to the receiving waters is anticipated.
8.	☐ The PCSM Plan has been planned, designed, and will be implemented to be consistent with the E&S Plan.
9.	□ A pre-development site characterization has been performed.

	☐ Riparian Buffer (< 150 ft) ☐ Riparian Forest Buffer (< 150 ft)								
	Approved Alternative:								
	Explain how the E&S BMP(s) will income for storm events up to and including	dividually or collectively <u>manage</u> th the 2-year/24-hour storm <u>during</u> t	ne net change in stormwater volume, rate, and quality he earth disturbance activities.						
	ABACT BMP's are proposed and	are cost effective.							
	ANTIDEGRADATION - PO	ST-CONSTRUCTION STORMV	VATER MANAGEMENT (PCSM) PLAN						
	A Non-Discharge Alternative will be utilized for the project that either individually or collectively eliminate the net change in stormwater volume, rate, and quality for storm events up to and including the 2-year/24-hour storm <u>after</u> earth disturbance activities.								
	Identify the PCSM BMPs that will be	e used to achieve the non-discharg	e alternative:						
	☐ Alternative Siting: Location		Low Impact Development						
	☐ Alternative Siting: Configuratio	n \square	Riparian Buffer (150-ft. min.)						
	☐ Alternative Siting: Location of □	Discharge	Riparian Forest Buffer (150-ft. min.)						
	☐ Infiltration		Water Reuse						
	Other:								
	quality for storm events up to and in See Section 12.0 of the PCSM Pla	n Narratives for specific information ill not be utilized, explain the ra	ate the net change in stormwater volume, rate, and after earth disturbance activities. ation pertaining to each project component. tionale for non-selection, including why none of the						
	ABACT BMP's are proposed and	·							
	ADAOT Billi 3 die proposed did (are cost effective.							
\boxtimes		ne net change in stormwater volume	ACT) has been selected for the project that will either e, rate, and quality for storm events up to and including						
	Identify the ABACT PSCM BMPs that	at will be utilized:							
	Rain Garden (with Infiltration)		Disconnection of Impervious / Roof Area						
	Rain Garden (without Infiltration	n)	Pervious Pavement with Infiltration Bed						
	☐ Constructed Filter		Infiltration Basin						
			Infiltration Bed						
	☐ Vegetated Filter Strip		Infiltration Trench						
	☐ Constructed Wetland		Soil Amendment						
	☐ Wet Pond		Dry Well / Seepage Pit						
	□ Dry Extended Detention Basin		Infiltration Berm / Retentive Grading						
	☐ Water Quality Device		Protect Sensitive / Special Value Features						
	☐ Spray / Drip Irrigation		Street Sweeping						
	Rain Barrel		Green Roof						

3800-PM-BCW0406c Rev. 6/2021 Antidegradation Module 3

Approved Alternative:				
Explain how the PCSM BMP(s) will individually or collectively <u>manage</u> the net change in stormwater volume, rate, and quality for storm events up to and including the 2-year/24-hour storm <u>after</u> earth disturbance activities.				
Along the pipeline Right-Of-Way, typical E&S BMPs such as waterbars and erosion control blanket will be left in place as part of site restoration. After construction activities are completed, temporary workspaces will be restored to meadow in good condition or better than existing conditions. For the aboveground facilities, PCSM BMPs such as infiltration basins, diversion channels and vegetated swales will be used and left in place as part of site restoration. Additional information regarding all the proposed BMPs are provided in the Post-Construction Stormwater Management Plans of respective project components (Section 3 of this ESCGP-3 Application).				
CERTIFICATION				
I certify under penalty of law and subject to the penalties of 18 Pa.C.S. § 4904 (relating to unsworn falsification to authorities) that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

	1 1 1 48	I/I INU				

	If Yes to question #2, identify the option selected by the applicant to meet the requirements of 25 Pa. Code § 102.14(a)(2) or Act 162 of 2014:				
	☐ A 150-foot (min.) riparian forest buffer will be implemented (maintained, converted or established).				
	An equivalency demonstration to a riparian forest buffer will be conducted (Individual NPDES Permits Only).				
	Applicant is seeking a waiver (E&S Permits Only).				
3.	Species that will be planted:				
4.	Average minimum widths: Zone 1: ft Zone 2: ft				
5.	Buffer linear length: ft				
6.	A riparian forest buffer management plan has been included in the PCSM Plan for the project.				
7.	The buffer will be protected in perpetuity by: Deed restriction Conservation easement				
	☐ Other:				
	EQUIVALENCY DEMONSTRATION				
	Worksheets 12 and 13 from DEP's Pennsylvania Stormwater BMP Manual (363-0300-002) and Worksheets 14 and 15				
	from DEP's Rinarian Buffer or Rinarian Forest Buffer Equivalency Demonstration (310-2135-002) have been completed				
	The Checklist for Functional Equivalency of Riparian Buffers and Riparian Forest Buffers as contained in DEP's Riparian Buffer or Riparian Forest Buffer Equivalency Demonstration (310-2135-002) is attached to this module.				
	Will there be any earth disturbance within 100 feet of a surface water (as defined in 25 Pa. Code § 102.1)?				
	☐ Yes ☐ No				
	If Yes, complete the Riparian Forest Buffer Offset Information section. If No, skip to the Certification section.				
	RIPARIAN FOREST BUFFER OFFSET INFORMATION				
1.	Area that must be offset (show on PCSM Plan Drawing): N/A acre(s)				
2.	Proposed offset area (show on PCSM Plan Drawing): acre(s)				
3.	Ch. 93 Drainage List of Project Site Waters:				
4.	Ch. 93 Drainage List of Offset Site Waters: Name of Offset Site Waters:				
5.	Offset Property Owner Name and Address:				
	Authorization to implement a new riparian forest buffer at the offset site has been provided and is attached.				
	A Plan showing the location of the offset site and the buffer extent and an implementation plan are attached.				
6.	Species that will be planted:				
7.	Average minimum widths: Zone 1: ft Zone 2: ft				
8.	Buffer linear length: ft				
	A riparian forest buffer management plan has been included in the PCSM Plan for the project.				
9.	A riparian forest buffer management plan has been included in the PCSM Plan for the project.				
	☐ A riparian forest buffer management plan has been included in the PCSM Plan for the project. The buffer will be protected in perpetuity by: ☐ Deed restriction ☐ Conservation easement				

WAIVER INFORMATION					
1.	The	project qualifies for the following waive	er(s) under 25 Pa. Code § 102.14(d)(2):		
		☐ The project is necessary to abate a substantial threat to public health or safety.			
	\boxtimes	☑ The project is a linear project including pipelines, public roadways, rail lines or utility lines.			
		☐ The project is an abandoned mine reclamation activity that will be conducted under a DEP authorization or permit.			
		☐ The project is a redevelopment project which may include brownfields or use of other vacant land and property within a developed area for further construction or development.			
		Compliance with 25 Pa. Code §§ 102 structures at the project site.	.14(a) or (b) is not appropriate or feasible due to site characteristics or existing		
2.		An alternatives analysis is attached.	Section 1.7 includes a discussion of routing and neckdown. A detailed discussion on alternatives is provided in Chapter 105 permit applications.		
3.		Existing riparian buffers will be preserv	ved to the extent practicable.
