I am concerned about health impacts of blue hydrogen, which is promoted as a clean energy source—but absolutely is not.

It poses considerable risk to polluting our air, land, and water; thereby to humans, animals, and other life. It commits too many resources to a future of more carbon expenditure now safely sequestered in the ground, where it belongs, into top and above ground levels and the atmosphere.

That kind of resource dedication locks us into a dystopic future fuelled by fossil fuels, instead of moving forward with truly clean and renewable fuel sources.

Perhaps you don't live in a sacrifice zone, but I do. We don't need more ecological burdens.

Sincerely,
Benita J. Campbell
