

# Pennsylvania Climate Impacts Assessment and Climate Action Plan 2021

Environmental Justice Advisory Board November 16, 2021

## Today's Presenter

Lindsay Byron

DEP Energy Programs

Office, Environmental

Group Manager

#### **DEP Climate Program**

# Pennsylvania Climate Change Act (Act 70 of 2008) Requires DEP to:

- Develop a <u>climate impacts assessment</u> (3 yrs.)
- Prepare and update a <u>climate action plan</u> (3 yrs.)
- Develop an <u>inventory of greenhouse gases</u> (GHGs) (update annually)
- Administer a <u>climate change advisory committee</u> (CCAC) (bimonthly)
- Set up a voluntary registry of GHG emissions (<u>TCR</u>)

## Why a Climate Program?

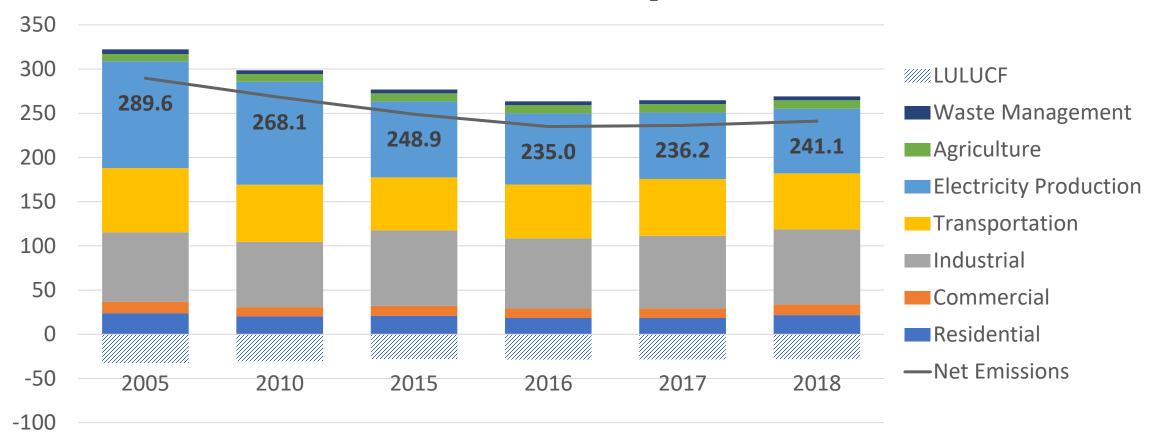

"Climate change is the most critical environmental threat confronting the world...Given the urgency of the climate crisis facing Pennsylvania and the entire planet, the commonwealth must continue to take concrete, economically sound and immediate steps to reduce emissions."

Governor Tom Wolf, October 3, 2019

## **GHG** Emissions Inventory

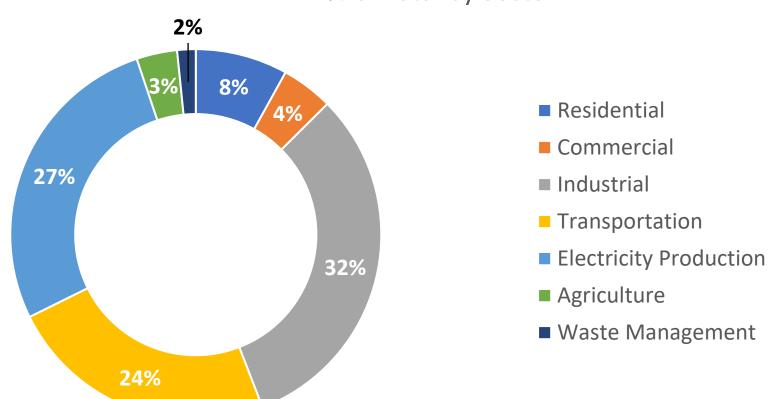

#### GHG Emissions (MMTCO<sub>2</sub>e) by Sector

## **GHG** Emissions Inventory

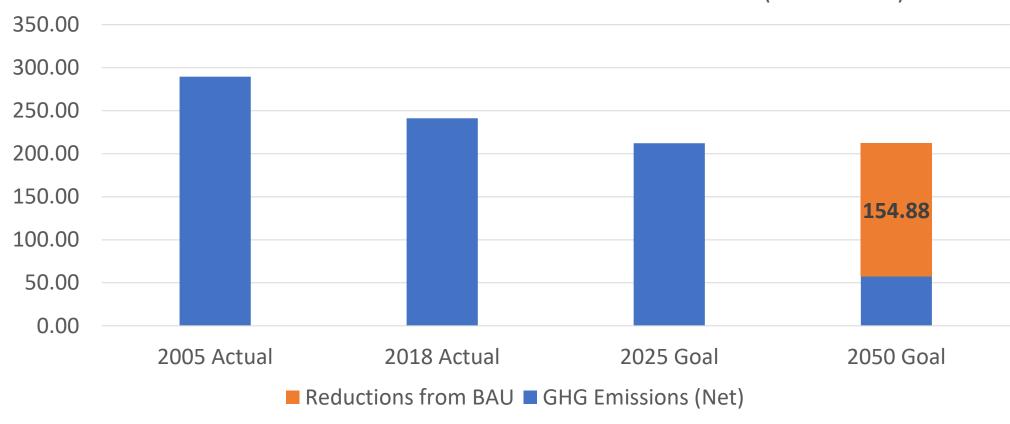

Pennsylvania 2018 GHG Emissions % of Total by Sector

#### Greenhouse Gas Reduction Goals

#### GHG Reductions Needed to Meet 2025 and 2050 Goals (MMTCO2e)

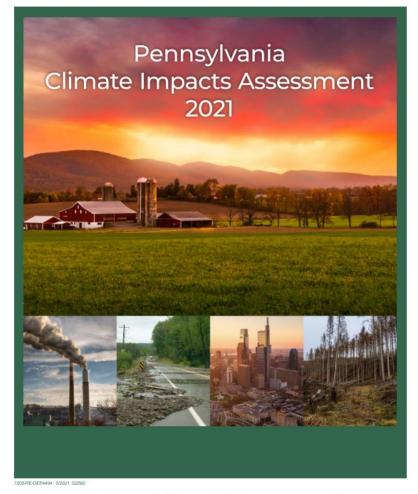

#### 2021 Impacts Assessment Focus Areas and Updates

#### **Purpose of this Report:**

- Update: Reflect latest available information on climate science and impacts
- Risk-based approach: Understand relative timing and severity of impacts to inform overall risk ratings and priorities for adaptation
- Make it actionable: Directly inform priority adaptation actions in the Climate Action Plan (CAP)

## Impacts Assessment – Climate Projections

#### Climate Projections - PA is getting warmer and wetter.

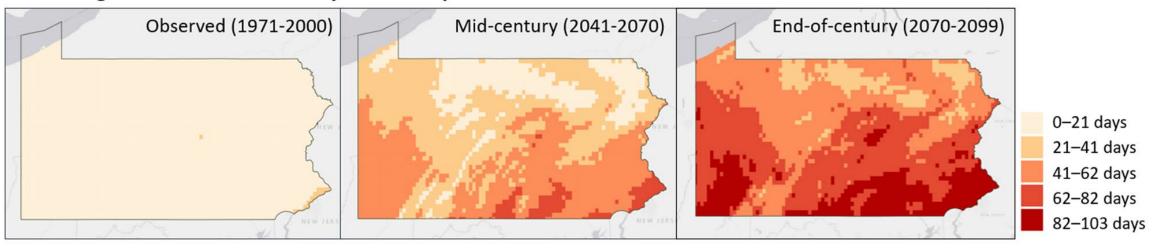

- Over past 110 years, temperatures in PA increased by more than 1.8°F and are expected to increase by an additional 5.9°F by 2050
- Cities are expected to see increased frequency of 100+ degree days
- Annual precipitation in PA has increased by 10% since early 20th century and is expected to increase by another 8% by 2050, with a winter increase of 14%

#### Impacts Assessment – Climate Projections

#### Observed and projected annual days with temperatures above 90°F

#### Average Annual Number of Days with Temperatures >90°F

Baseline: 5 days

Mid-century: 37 days

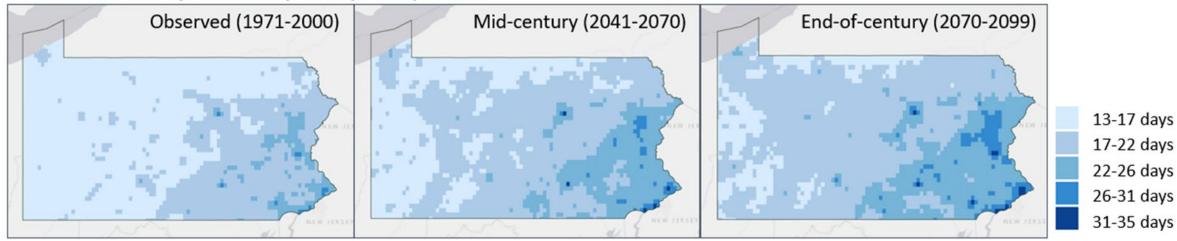

**End-of-century: 66 days** 

#### Impacts Assessment – Climate Projections

#### Observed and projected annual days with "very heavy" precipitation

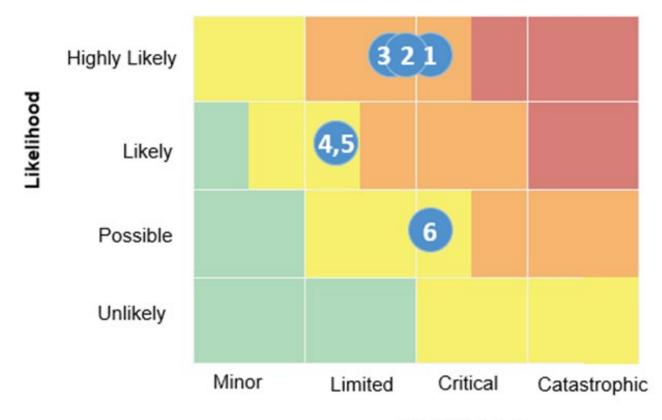

#### Number of Days with Very Heavy Precipitation

Baseline: 12.4 days Mid-century: 15.4 days End-of-century: 16.8 days

#### 2050 Risk Assessment Results

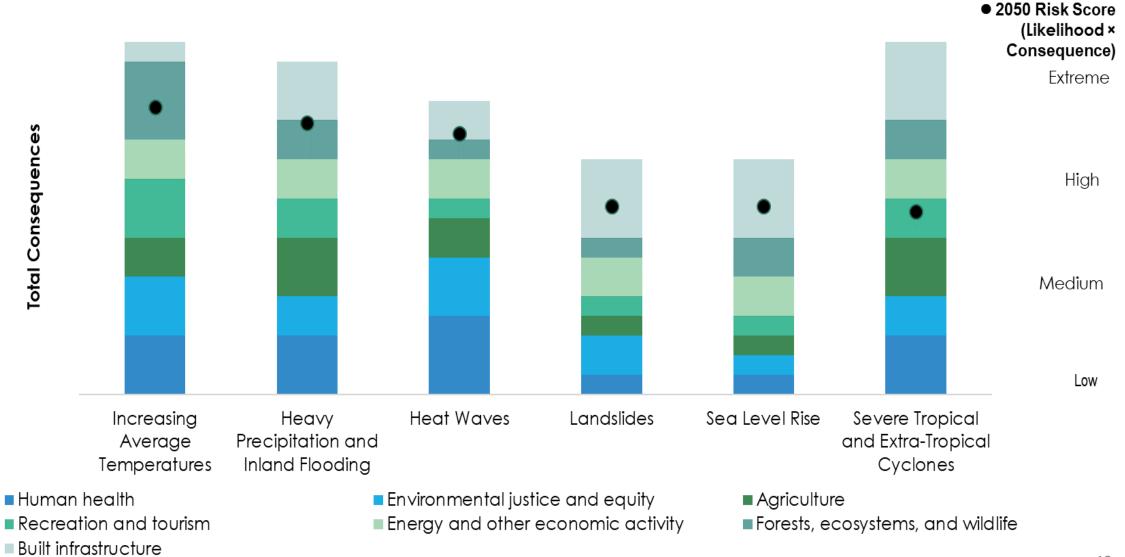

#### Consequence

- 1 = Increasing average temperatures
- 2 = Heavy precipitation and inland flooding
- 3 = Heat waves

- 4 = Landslides
- 5 = Sea level rise
- 6 = Severe tropical and extra-tropical cyclones

#### 2050 Risk Assessment Results

## 2050 Risk Assessment Results

Consequence Category Hazard	Human health	Environmental justice and equity	Agriculture	Recreation and tourism	Energy and other economic activity	Forests, ecosystems, and wildlife	Built infrastructure	Overall Risk Rating
Increasing average temperatures	12	12	8	12	8	16	4	10.7
Heavy precipitation and inland flooding	12	8	12	8	8	8	12	9.9
Heat waves	16	12	8	4	8	4	8	9.3
Landslides	3	6	3	3	6	3	12	5.6
Sea level rise	3	3	3	3	6	6	12	5.6
Severe tropical and extra tropical cyclones	6	4	6	4	4	4	8	5.3

## Risk Assessment Key Findings

- Flooding is currently the highest-risk hazard facing Pennsylvania, and flood risks are projected to increase; at the same time, risks from increasing average temperatures and heat waves could rise to be as high as flooding is today by mid-century
  - Flooding from heavy rain events affects built infrastructure, human health, and agriculture, with ripple effects throughout the economy
  - Increasing average temperatures could affect nearly every aspect of life
- Heat waves will become increasingly common and will create particular health and economic risks for vulnerable populations
- All hazards could affect public health negatively—especially heat waves, increasing temperatures, and flooding
- Climate change will not affect all Pennsylvanians equally. Some may be more at risk because of their location (and inability to relocate), income, housing, health, or other factors
- Landslides and sea level rise can cause severe impacts in the locations where they occur, but pose relatively low risks statewide
- Severe tropical storms, flooding, and landslides already pose risks, and these could become more likely or severe in the future

## Impacts to Human Health

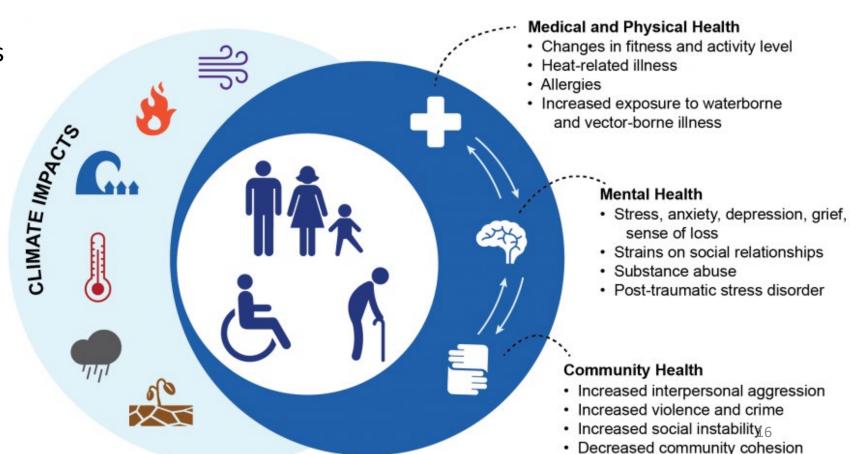

Increasing average temperatures and heat waves are projected to increase:

- heat-related illnesses or deaths
- allergies
- violence and crimes
- anxiety and mood disorders

pennsylvania

Flooding and severe cyclones can also have severe health impacts such as:

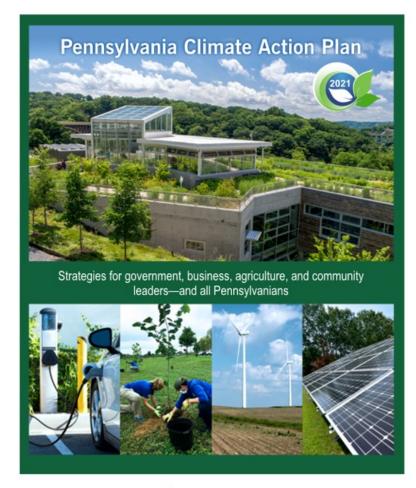

- disrupting critical services
- making conditions are more hazardous

#### Pennsylvania Climate Action Plan 2021

#### **Purpose of this Report:**

- Updated BAU Emissions Scenario Projections
- Outlines a pathway to reaching PA's GHG reduction goals: 26% by 2025 and 80% by 2050 from 2005 levels
- Quantifies GHG reduction and economic costs/benefits of climate action
- Includes discussion on the role of "enabling technologies" in meeting PA's GHG reduction goals
- Priority adaptation actions directly informed by the Pennsylvania Climate Impacts Assessment 2021
- Focus on equity throughout

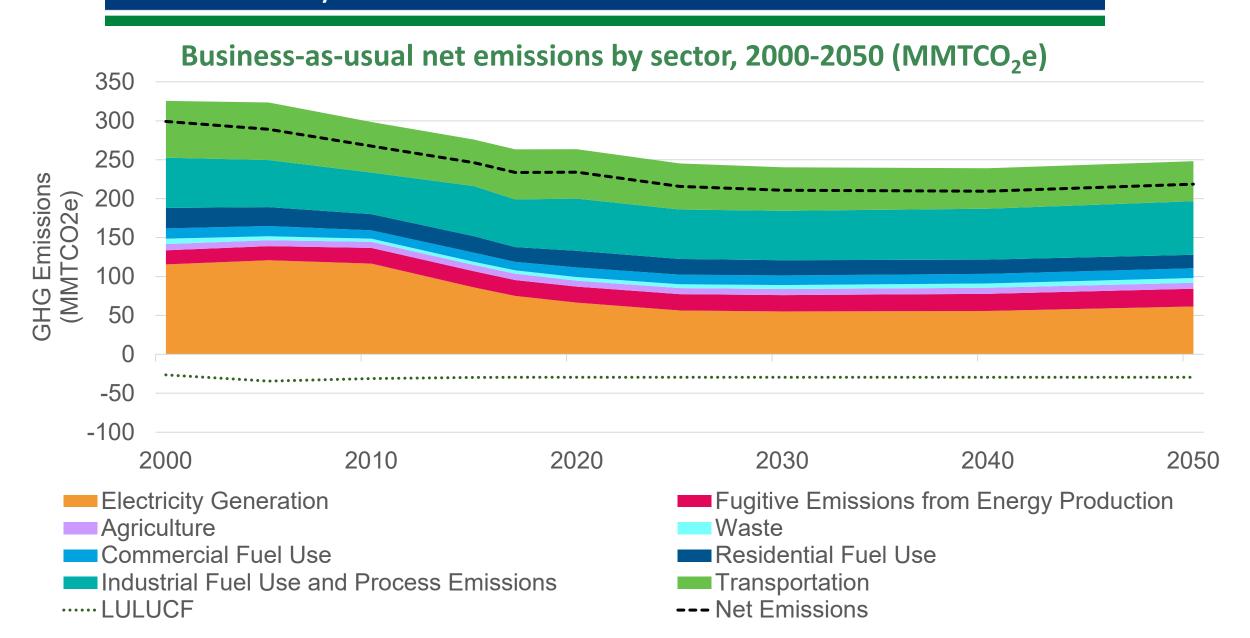

#### Pennsylvania Climate Action Plan – Business As Usual

## Pennsylvania Climate Action Plan – Strategies

#### **Start Now and Implement in 5 years:**

- Institute the most up-to-date building codes for energy efficiency.
- Improve residential and commercial energy efficiency.
- Increase distributed on-site solar energy.
- Increase Industrial energy efficiency and fuel switching.
- Use programs and incentives to increase energy efficiency for agriculture.
- Incentivize use of distributed combined heat and power.
- Keep nuclear energy generation at current levels.

## Pennsylvania Climate Action Plan – Strategies

#### **Start Now and Implement in 10 years:**

- Incentivize building electrification.
- Increase fuel efficiency of light-duty vehicles and reduce vehicle miles traveled for single-occupied vehicles
- Increase use of light-duty electric vehicles.
- Institute a low-carbon fuel standard to reduce the carbon intensity of transportation fuels.
- Increase capture of biogenic methane from non-fossil sources, including animal manure, food waste, and landfill gas, for use in by commercial and industrial properties.
- Reduce fugitive methane emissions from fossil fuel extraction industries such as oil and natural gas operations.
- Provide training and tools for agricultural best practices.
- Increase land and forest management to increase carbon absorption.

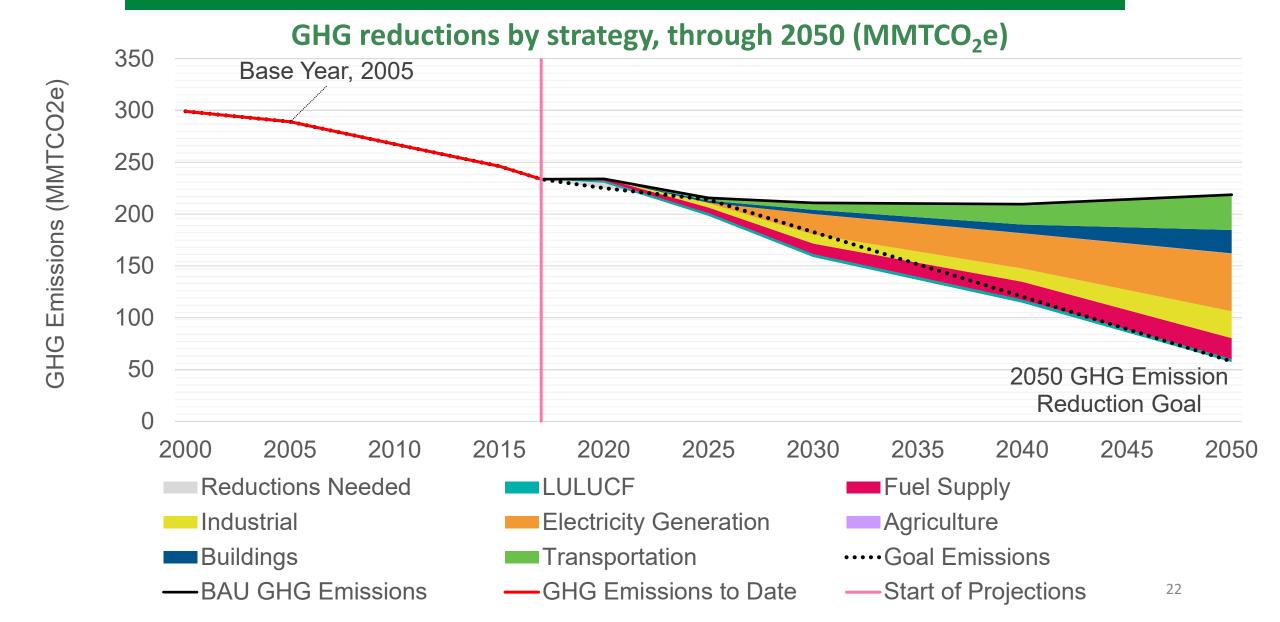

## Pennsylvania Climate Action Plan – Strategies

## **Start Now and Implement in 10+years:**

- Implement a multi-state Memorandum of Understanding to make all medium- and heavy-duty vehicle sales zero emissions vehicles by 2050.
- Establish a carbon emissions-free grid.

#### Pennsylvania Climate Action Plan – Business As Usual

#### Pennsylvania Climate Action Plan – Enabling Tech

#### **Enabling Technologies**

- Incentivizing grid-level battery storage;
- Power-to-gas and blue and green hydrogen;
- Carbon capture, utilization, and storage (CCUS);
- Direct Air Capture (DAC);
- Peak energy load and balancing strategies;
- Carbon offsets; and
- Disruptive digital technologies.

1. Impacts of Increasing Average Temperatures and Heat Waves on Health

2. Impacts of Flooding and Storms on Health

3. Impacts of
Increasing Average
Temperatures on
Environmental Justice
and Equity

4. Impacts of Flooding on Environmental Justice and Equity

5. Impacts of Increasing Average Temperatures on Forests, Ecosystems, and Wildlife

6. Impacts of a Warmer and Wetter Climate on Agriculture 7. Impacts of Increasing Average Temperatures on Recreation and Tourism

8. Impacts of a Changing Climate on Built Infrastructure

9. Impacts of Landslides on Built Infrastructure

Example: Adaptation strategy pathway to reduce increased hazard impacts of high temperatures and flood on overburdened and vulnerable populations

#### Types of Foundational Actions to Understand and Prepare to Address Impacts and Vulnerabilities

Establish metrics and actors responsible for tracking equity of impacts and solutions

Identify
opportunities
for
community
capacitybuilding

Identify key
policies and plans
to incorporate
environmental
justice and equity

Identify vulnerable communities and opportunities to meaningfully engage and partner with community-based organizations and residents

Identify processes to assess equity challenges and risks

Establish climate equity goals through collaborative convening

#### Approaches to Reduce Vulnerabilities and Manage Impacts

#### Types of Approaches

Example Strategies: temperature (T), flooding (F) Invest in community capacitybuilding

F: Create grants for communitybased resilience projects (e.g., flood-protected community center with roof garden) Support
vulnerable
populations
when
integrating
climate risks into
key plans

T: Study informal heat wave event coping practices; support in emergency plans, given warming projections Improve infrastructure in vulnerable communities to reduce impacts

T: Plant trees and create cooling shelters in areas with many low-income families

F: Increase flood mitigation grant funds and reduce application barriers Support resource development and implementation including training and education to fortify capacity of local organizations

T: Train homeless shelter staff on heat hazards; provide supporting supplies (e.g., tick repellant)

F: Provide homeless shelter staff and faith leaders with resources on flood risks

#### Ongoing Strategies

Develop, maintain, and analyze metrictracking databases

Establish programs or funding streams to implement strategies

Regularly update climate hazard resource hub for non-expert audiences

Example set of strategies to be pursued to support climate justice and counteract equity challenges resulting from increased average temperatures (top) and flooding (bottom).

#### Foundational Strategy Type:

Establish metrics and key actors and responsibilities for tracking equity of impacts and solutions

Example(s): Track data on extreme heat and flood hazards and equity; make available to the public and use to prioritize action across other strategies (e.g., identify communities most vulnerable to impacts, and ensure funding availability for mitigation infrastructure in those communities).

Actors: State will provide funding, support coordination, and provide technical assistance as needed; researchers and community organizations will partner to develop and track metrics, and analyze findings.

**Timing:** As soon as possible

**Approach:** Develop and maintain databases to track metrics; act on findings

**Strategy:** Develop and regularly update climate hazard resource database for non-expert audiences

**Actors:** Researchers/ scientists and community organizations

**Timing:** Begin as soon as possible, then ongoing as data is collected and metrics are refined

**Approach:** Develop and maintain databases to track metrics; act on findings

**Strategy:** Establish program or funding streams to fund and implement strategies

**Actors:** State agencies (e.g., OEJ) will provide funding

Timing: As soon as possible

**Approach:** Develop and maintain databases to track metrics; act on findings

**Strategy**: Develop citizen science programs, create system that collects community observations, and include citizen science and community observations both in public climate data resources and in databases used for local and State planning

**Actors:** Community organizations, researchers

**Timing:** Develop as soon as possible; maintain over time.

**Approach:** Develop and maintain databases to track metrics; act on findings

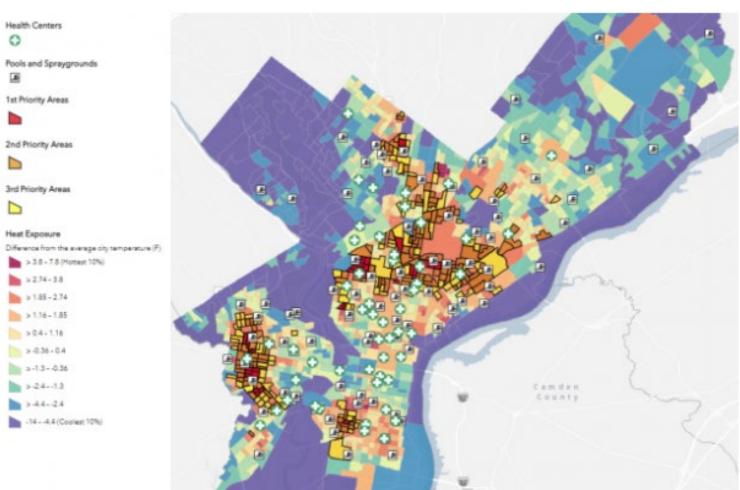

**Strategy**: Map distribution of flooding and heat hazards, analyze to identify priority areas, and publicize findings

Actors: GIS specialists generate maps; researchers and community organizations analyze findings; researchers develop summary for publication, with review by community orgs for clarity and value

**Timing:** Develop once data is available.

**Case Study** 

#### A Community-Driven Approach to Tackling Heat in Philadelphia

#### Philadelphia Heat Vulnerability Index map

Philadelphia Office of Sustainability (OOS). 2019. "Beat the Heat Hunting Park: A Community Heat Relief Plan."

"Heat Vulnerability Index highlights City hot spots." <a href="https://www.phila.gov/2019-07-16-heat-vulnerability-index-highlights-city-hot-spots/">https://www.phila.gov/2019-07-16-heat-vulnerability-index-highlights-city-hot-spots/</a>

## Pennsylvania's Ongoing Energy and Climate Efforts

#### **Executive Order 2019-01 directs commonwealth agencies to:**

- Reduce energy use by 3% per year and 21% by 2025 from 2017 levels
- Procure renewable energy to offset at least 40% of the Commonwealth's annual electricity use
- Design and construct new buildings/renovation projects as a highperformance buildings
- Replace 25% of the state vehicle fleet with battery electric and plug-in electric hybrid cars by 2025
- Established the GreenGov Council helps incorporate environmentally sustainable practices into the Commonwealth's policy, planning, operations, procurement, and regulatory functions. It promotes best practices and energy efficiency, including solar purchase for state buildings.

- Oil and Gas Sources Emissions Control Regulations reduces emissions from natural gas well sites, compressor stations and along pipelines, to not only contribute to climate change mitigation, but also help businesses reduce the waste of a valuable product.
- Act 213 of 2004, Alternative Energy Portfolio Standard requires electrical distribution and electrical generation companies to purchase a certain percentage of electricity from alternative generation sources.
- Act 129 Phase IV expands on phase III, as electric distribution companies incorporate energy efficiency and conservation programs into their operations.
- **DCNR's Adaptation Plan** outlines over 100 action steps to increase resiliency against climate change impacts.

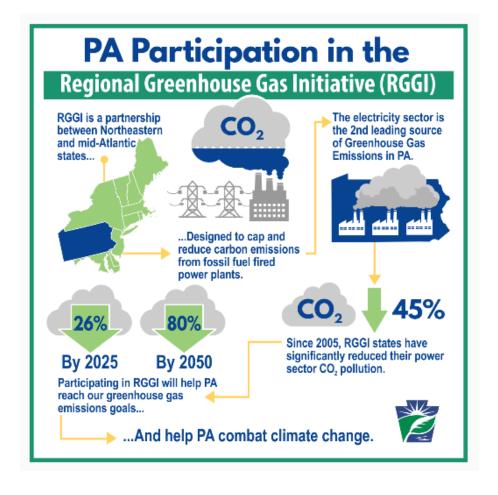

- <u>PennDOT's Vulnerability Study</u> helps anticipate the impacts of extreme weather events so that transportation funding and resiliency may be prioritized.
- **ZEV Rulemaking** coordinates standards that control smog-causing pollutants and GHG emissions of light-duty vehicles.
- Medium- and Heavy-Duty Zero Emission Vehicles MOU advances and accelerates the market for electric medium- and heavy-duty vehicles.
- **EV Roadmap** identifies strategies to increase the adoption of EVs. The Roadmap identifies near-, mid-, and long-term strategies to incentivize and remove barriers to EV adoption.

- <u>Driving PA Forward</u> creates grants and rebate programs aimed at improving air quality in Pennsylvania by spurring the transition from older, polluting diesel engines to clean engine technologies powered by electricity, compressed natural gas, propane, or clean diesel. This initiative is a product of the Volkswagen Mitigation Trust Fund, a one-time penalty settlement that provided funds to establish a series of grants and the rebate program.
- AFIG promotes the use of alternative fuels in Pennsylvania. AFIG has operated four incentive programs: Alternative Fuel Vehicle Rebate Program, AFIG Grant Program, AFIG Fixing America's Surface Transportation (FAST) Act Infrastructure Program, and Alternative Fuels Technical Assistance Program.

 RGGI – reduces GHG emissions from the power sector while also generating economic growth. It sets a regional cap on emissions from electric power plants.

- **PEDA COVID-19 Restart Grant** awarded \$1.7 million in grant funding to restart 11 clean energy projects disrupted by the COVID pandemic in urban, rural with an emphasis on environmental justice neighborhoods. The projects were intended to: Re-hire workers or hiring of additional workers to complete the project quickly, make immediate equipment payments to restart the supply chain, and overcome lost revenue due to market stagnation. Clean energy projects supported included: 4 solar projects, 3 energy efficiency projects, 1 solar & energy efficiency project, 1 EV charger project, and 2 high performance building projects.
- **C-PACE expansion** provides business property owners with low-interest, long-term loans for clean energy and clean water projects that are repaid as property tax to benefit the community.

- <u>DEP's Local Climate Action Program</u> allows local governments and college students to work together to develop GHG inventories and climate action plans.
- Shared Energy Manager Program DEP hired a contractor to serve as a part-time Shared Energy Manager (SEM) for five jurisdictions that had participated in DEP's Local Climate Action Program (LCAP). The SEM supported those local governments in implementing many of the energy-related strategies from their CAPs such as energy benchmarking, energy audits, solar PV feasibility assessments, development of energy management plans, and alternative fuel evaluations for fleet vehicles.
- PA Climate Leadership Academy advances the capacity of state and local government agencies, infrastructure organizations, and businesses to develop and implement sound climate change initiatives via comprehensive training programs.

## Thank you!
