## 3150-PM-BWEW0035 Rev. 8/2016 Application

| 5. | Of  | ff Site Discharge Analysis   |
|----|-----|--|
|    | Do  | pes the project propose any off-site discharges to areas other than surface waters?  |
|    | ap  | yes, the applicant must have appropriate easement that provides the legal authority for this off-site discharge. In addition, oplicant must provide a demonstration in both the E&S and PCSM plans that the discharge will not cause erosion, damage, or itsance to off-site properties.                               |
|    |     |  |
|    |     |  |
| 6. | Pot | rential Pollution Causing Materials  |
|    |     | ntify naturally occurring geologic formations or soil conditions that may have the potential to cause pollution during earth turbance activities and include BMPs to avoid or minimize potential pollution and its impacts from the formation.   |
|    | The | ere are no known Geologic or other soil conditions that have the potential to cause pollution during construction of the pipeline portion of the project.  |
| 7. | Rip | arian Buffers  |
|    | A.  | Does the project discharge to a river, stream, creek, lake, pond or reservoir with a designated use of high quality or exceptional value? If so, is earth disturbance occurring within 150 feet of the river, stream, creek, lake, pond or reservoir?  |
|    |     | If yes, go to B. If no, continue to Section 8.   |
|    | B.  | Will you be protecting, converting, or establishing a 150 foot riparian buffer throughout the project area?  |
|    |     | Protect  Yes No Convert Yes No Establish Yes No  |
|    |     | If No to all above, the application must contain a demonstration of riparian buffer or riparian forest buffer equivalency. (Continue to C)   |
|    | C.  | What BMPs will you be using that will be functionally equivalent to that of either a riparian buffer or a riparian forest buffer whatever is applicable to the project? Please attach an equivalency demonstration.  |
|    |     | An equivalency demonstration must be completed, including worksheets 12-15 and a narrative that shows that the alternative BMPs implemented will be functionally equivalent to that of either a riparian buffer or a riparian forest buffer, whichever is applicable to the project according to 102.14(a)(1) and (2). |
|    | D.  | Will the project propose any earth disturbance within 100 feet of a surface water? ☐ Yes ☐ No  |
|    |     | If yes, the applicant shall provide an offset riparian forest buffer at a ratio of one to one for the disturbed area.  |
| 8. | The | ermal Impacts Analysis   |
|    | Exp | plain how thermal impacts associated with this project were avoided, minimized, or mitigated.  |
|    |     | ermal impacts of stormwater runoff from the pipeline portion of the project were avoided, minimized, and mitigated by restoring disturbed areas to the conditions that existed prior to construction   |
|    |     |  |
|    |     |  |

## APPENDIX B SAMPLE COUNTY LAND USE LETTER\*

\*(This sample letter and form is provided for the convenience of the applicant and the County. It does not prohibit the applicant from using a different template nor does it prohibit the County from submitting a different form of response.)

| •   |
|---|
| Date:   |
| Dear County Planning Director:  |
| Acts 14, 67, 68 and 127, which amended the Municipalities Planning Code, direct state agencies to consider comprehensive plans and zoning ordinances when reviewing applications for permitting of facilities and infrastructure, and specify that state agencies may rely upon comprehensive plans and zoning ordinances under certain conditions as described in Sections 619.2 and 1105 of the Municipalities Planning Code. The Pennsylvania Department of Environmental Protection's Policy for Consideration of Local Comprehensive Plans and Zoning Ordinances in DEF Review of Permits for Facilities and Infrastructure (DEP's Land Use Policy) provides direction and guidance to DEP staff permit applicants, and local and county governments for the implementation of Acts 67, 68 and 127 of 2000. This policy can be found at <a href="https://www.dep.pa.gov">www.dep.pa.gov</a> , keyword: Land Use. |
| In accordance with DEP's Land Use Policy, enclosed please find a County Land Use Letter that is to be submitted with our permit application to DEP for an NPDES Permit for Stormwater Discharges Associated with Construction Activities Please complete the attached form and return within 30 days to:  |
| Name of Applicant:  |
| Address of Applicant:   |
| Project Location:   |
| Project Description:  |
|   |
| <u>Please do not send this form to DEP</u> , as we must include the County Land Use Letter with our permit application. If we do not receive a response from you within 30 days, we shall proceed to submit our permit application to DEP without the County Land Use Letter. If the County Land Use Letter is not submitted with our permit application, and we provide proot to DEP that we attempted to obtain it, DEP will assume there are no substantive land use conflicts and proceed with the normal application review process.   |
| If you have any questions, please do not hesitate to contact me at (phone number and/or email).   |
| Sincerely,  |

## APPENDIX C SAMPLE MUNICIPAL LAND USE LETTER\*

\*(This sample letter and form is provided for the convenience of the applicant and the Municipality. It does not prohibit the applicant from using a different template nor does it prohibit the Municipality from submitting a different form of response.)

| approach from doing a uniorant temprate for door it promote the manifolding mem cashinting a uniorant temprate for doponee.)   |
|--|
| Date:  |
| Dear Municipal Secretary:  |
| Acts 14, 67, 68 and 127, which amended the Municipalities Planning Code, direct state agencies to consider comprehensive plans and zoning ordinances when reviewing applications for permitting of facilities and infrastructure, and specify that state agencies may rely upon comprehensive plans and zoning ordinances under certain conditions as described in Sections 619.2 and 1105 of the Municipalities Planning Code. The Pennsylvania Department of Environmental Protection's Policy for Consideration of Local Comprehensive Plans and Zoning Ordinances in DEP Review of Permits for Facilities and Infrastructure (DEP's Land Use Policy) provides direction and guidance to DEP staff, permit applicants, and local and county governments for the implementation of Acts 67, 68 and 127 of 2000. This policy can be found at <a href="https://www.dep.pa.gov">www.dep.pa.gov</a> , keyword: Land Use. |
| In accordance with DEP's Land Use Policy, enclosed please find a Municipal Land Use Letter that is to be submitted with our permit application to DEP for an NPDES Permit for Stormwater Discharges Associated with Construction Activities. Please complete the attached form and return within 30 days to:   |
| Name of Applicant:   |
| Address of Applicant:  |
| Project Location:  |
| Project Description:   |
|  |
| <u>Please do not send this form to DEP</u> , as we must include the Municipal Land Use Letter with our permit application. If we do not receive a response from you within 30 days, we shall proceed to submit our permit application to DEP without the Municipal Land Use Letter. If the Municipal Land Use Letter is not submitted with our permit application, and we provide proof to DEP that we attempted to obtain it, DEP will assume there are no substantive land use conflicts and proceed with the normal application review process.   |
| If you have any questions, please do not hesitate to contact me at (phone number and/or email).  |

#### Worksheet 2. Sensitive Natural Resources from PA Stormwater Best Management Practices Chapter 5

#### **INSTRUCTIONS**

| 1. | Provide Sensitive Resources Map according to non-structural BMP 5.4.1 in Chapter 5. This map  |
|----|---|
|    | should identify wetlands, woodlands, natural drainage ways, steep slopes, and other sensitive |
|    | natural areas.  |

- 2. Summarize the existing extent of each sensitive resource in the Existing Sensitive Resources Table (below, using Acres). If none present, insert 0.
- 3. Summarize Total Protected Area as defined under BMPs in Chapter 5.
- 4. Do not count any area twice. For example, an area that is both a floodplain and a wetland may only be considered once.

| EXISTING NATURAL<br>SENSITIVE RESOURCE | MAPPED?<br>Yes/no/n/a | TOTAL AREA<br>(Ac.) | PROTECTED<br>AREA (Ac.) |
|--|-----------------------|---------------------|-------------------------|
| Waterbodies                            |                       |                     |                         |
| Floodplains                            |                       |                     |                         |
| Riparian Areas                         |                       |                     |                         |
| Wetlands                               |                       |                     |                         |
| Woodlands                              |                       |                     |                         |
| Natural Drainage Ways                  |                       |                     |                         |
| Steep Slopes, 15% - 25%                |                       |                     |                         |
| Steep Slopes, over 25%                 |                       |                     |                         |
| Other:                                 |                       |                     |                         |
| Other:                                 |                       |                     |                         |

| 2-Year Volume Increase                                    | (ft3):       |              |                               |              |            |               |                                  |   |

### 2-Year Volume Increase = Developed Conditions Runoff Volume – Existing Conditions Runoff Volume

1. Runoff (in) = Q =  $(P-0.2S)^2 / (P+0.8S)$  where

P = 2-Year Rainfall (in)

S = (1000/CN)-10

2. Runoff Volume (CF) = Q x Area x 1/12

Q = Runoff (in)

Area = Land use area (sq. ft)

Note: Runoff Volume must be calculated for EACH land use type/condition and HSGI. The use of a weighted CN value for volume calculations is not acceptable.

**REQUIRED REDUCTION from WS 14 (LBS)** 

<sup>\*</sup>Pollutant Load = [EMC, mg/l] X [Volume, AF] X [2.7, Unit Conversion]

#### Checklist for Functional Equivalency of Riparian Buffers and Riparian Forest Buffers

|                                     | Riparian Buffer | Riparian Forest Buffer |
|-------------------------------------|-----------------|------------------------|
| Filtration of pollutants in runoff  |                 |                        |
| Infiltration and maintenance of     |                 |                        |
| streamflow                          |                 |                        |
| Water quality maintenance           |                 |                        |
| Habitat for wildlife and vegetation |                 |                        |
| Flood attenuation                   |                 |                        |
| Light control and water             |                 |                        |
| temperature moderation              |                 |                        |
| Travel corridors for migration and  |                 |                        |
| dispersal                           |                 |                        |
| Ice damage control                  |                 |                        |
| Stream width                        |                 |                        |
| Food supply                         |                 |                        |
| Wood debris input                   |                 |                        |
| Support of aquatic food chains      |                 |                        |
| and webs as they relate to          |                 |                        |
| terrestrial food webs               |                 |                        |
| Channel and shoreline               |                 |                        |
| stability/decrease in erosion       |                 |                        |
| Reduced effects of storm events     |                 |                        |
| Instream pollutant processing       |                 |                        |
