 DRINKING WATER STATE REVOLVING FUND  
 FEDERAL FY2022 - PROJECT PRIORITY LIST  
 UPDATED JUNE 2, 2022**

<b>APPLICANT NAME:</b> WIFTA- MUN. WTR. AUTH OF ALIQUIPPA- LEAD SERVICE LINE REPL. PHASE II	<b>REGION:</b> V	<b>DEP PROJECT RATING:</b> 91
<b>STREET ADDRESS:</b> 160 HOPEWELL AVENUE	<b>PWSID:</b> 5040006	<b>PROJRANK:</b> 1
<b>CITY:</b> ALIQUIPPA	<b>FUND SOURCE:</b> DWSRF	<b>PROJECT COST:</b> \$3,129,000
<b>COUNTY:</b> BEAVER	<b>MTGDATE:</b> 10/20/2021	<b>PROJECT TYPE:</b> DS

**PROJ. DESCRIPTION:** The scope of this project includes the replacement of an estimated 275 existing lead water service lines, determined from soft dig #3 and soft dig #4 contracts, from the main line to property line (curb box) with 3/4" copper water service lines. To determine the material type of the service lines a contractor has been contracted to excavate roughly 90 sites from soft dig #3 and 590 sites from soft dig #4 via vacuum truck for visual inspection of the service lines. The replacements will occur in the City of Aliquippa. MWAA is committed to replacing the private side of the service lateral. For the private side of the service lines, it is assumed that roughly 10% of the total sites are lead, or 28 private side service lines to be replaced. Based on historic experience and a limited field verification, a value of 10% of the service lines that contain lead on the public side will also contain lead on the private side. Confirmation on the private side will be conducted via excavation during replacement of the public side service. Construction proposes service line replacement including corporation at the main, curb box, and connection to existing just outside of structure wall, trench restoration, curb, sidewalk, walkway, lawn, and roadway restoration, and all appurtenances required for complete construction.

**PROB. DESCRIPTION:** The purpose of this project is to remove existing lead service lines in the Municipal Water Authority of Aliquippa (MWAA) service area to improve the overall water quality and potentially reduce the health risk that is present due to the aging lines. Lead in drinking water can cause brain and kidney damage, and interfere with the production of red blood cells that carry oxygen to all parts of the body. The greatest risk of lead exposure is to infants, young children and pregnant women. Studies have shown that the effects of lead on the brain correlate with lowered IQ in children. The Lead and Copper Rule was established to protect public health by minimizing lead and copper levels in drinking water, primarily by making water less corrosive. When the water is corrosive, the lead and copper found in plumbing materials can leach into drinking water. In addition to these requirements, the removal of lead lines in the system has become a priority and system will replace lead service line to reduce lead from the water supply.

<b>COUNTY:</b> SOMERSET	<b>MTGDATE:</b> 10/20/2021	<b>PROJECT TYPE:</b> DS

**PROJ. DESCRIPTION:** The proposed project includes an interconnection line with the Conemaugh Township Municipal Authority's (CTMA's) system, which will be the source of potable water for the Borough. The current treatment plant is anticipated to be abandoned upon project completion. In addition, the proposed project will include the replacement of approximately 14,000 linear feet of existing waterline, the construction of one (1) pump station, the installation of 20 fire hydrants, and the replacement of 190 customer meters.

**PROB. DESCRIPTION:** The proposed project includes an interconnection line with the Conemaugh Township Municipal Authority's (CTMA's) system, which will be the source of potable water for the Borough. Project will help Borough supply consistent potable water to its customer.

DRINKING WATER STATE REVOLVING FUND  
FEDERAL FY2022 - PROJECT PRIORITY LIST**

**UPDATED JUNE 2, 2022**

<b>APPLICANT NAME:</b> SOUTHWEST WARREN COUNTY MUNICIPAL AUTHORITY (SWCMA) UPGRADE	<b>REGION:</b> VI	<b>DEP PROJECT RATING:</b> 75
<b>STREET ADDRESS:</b> P O BOX 132	<b>PWSID:</b> 6620032	<b>PROJRANK:</b> 4
<b>CITY:</b> TIDOUTE	<b>FUND SOURCE:</b> DWSRF	<b>PROJECT COST:</b> \$1,043,000
<b>COUNTY:</b> WARREN	<b>MTGDATE:</b> 7/23/2021	<b>PROJECT TYPE:</b> WS, DS, LSL

**PROJ. DESCRIPTION:** The project includes the installation of a 40,600 gallon precast concrete tank and 188 LF of 8" PVC pipe to provide the necessary volume for adequate chlorine contact time and be able to meet the required log inactivation of Giardia. A prefabricated fiberglass building housing equipment to continuously monitor chlorine levels at the entry point will be installed. The project also includes 3 additional gate valves, connections to existing piping at two places, related electrical and control system modifications, and other minor plant modifications. Additionally, approx. 1,250 LF of water distribution pipe on Elm Street will be replaced (to eliminate all lead components including 9 service connections goosenecks, bell housings, valving, etc., 6 new gate valves, 2 new fire hydrant assemblies, 9 new service line installations including new curb boxes and curb stops and connections to the existing distribution system at three places.

**PROB. DESCRIPTION:** On August 21, 2020, the Department entered a Consent Order and Agreement with SWCMA, to solve compliance issues related to insufficient chlorine contact time CT required for Giardia log inactivation (related to a problem with air accumulating in a 24" pipe that currently provides chlorine contact volume), and lack of monitoring and recording equipment to monitor free chlorine levels at the entry point and in the distribution system. Three sand filter bays did not pass the standard requirements for slow sand filtration plant as confirmed during the FPPE. These problems have led to an "Unacceptable" FPPE. Additionally, a section of the distribution system on Elm Street, Tidioute contains antiquated (circa 1900) cast iron waterline with Lead components. The system has also a problem with elevated level of DBP (HAAS5) above the MCL.

DRINKING WATER STATE REVOLVING FUND  
FEDERAL FY2022 - PROJECT PRIORITY LIST**

**UPDATED JUNE 2, 2022**

<b>APPLICANT NAME:</b> WIFTA - PITTSBURGH WATER & SEWER AUTHORITY - 2021 LSLR PROJECT	<b>REGION:</b> V	<b>DEP PROJECT RATING:</b> 71
<b>STREET ADDRESS:</b> 441 SMITHFIELD ST.	<b>PWSID:</b> 5020038	<b>PROJRANK:</b> 5
<b>CITY:</b> PITTSBURGH	<b>FUND SOURCE:</b> DWSRF	<b>PROJECT COST:</b> \$4,706,512
<b>COUNTY:</b> ALLEGHENY	<b>MTGDATE:</b> 10/20/2021	<b>PROJECT TYPE:</b> DS, LSL

**PROJ. DESCRIPTION:** PWSA is requesting funding to provide for the replacement of 200 public and 167 private LSLR at a cost of \$4,706,512. All replacements will be 1-inch diameter with the public side being replaced by PEX and the private side being replaced by copper with a public length of approximately 3000' and private length of approximately 4,000' for a total of 7,000'. The locations proposed for replacement are Priority Lead Service Line Replacement locations, including Child Care Facilities and residences where lead elevated lead levels have been measured. While these locations will otherwise be replaced as part of a water main replacement project or future neighborhood replacement project, they either have sensitive populations using the water (Child Care facilities) or represent a location where orthophosphate is not effective. Due to their individual situation, these sites can be prioritized with this grant award.

**PROB. DESCRIPTION:** Since the start of PWSA's LSLR programs, almost 8,600 public and over 5,600 private LSLs have been replaced throughout PWSA's water service area. One area of need that has not been addressed throughout these programs, however, is what PWSA is terming "Priority LSLR" locations. These locations will consist of 1. Child Care Facilities – Many of the childcare facilities are in smaller buildings that formerly were homes or are in a portion of a residential dwelling, and are potentially served by a LSL. While PWSA plans to replace all LSLs within the water service area by 2026, childcare facilities serve the most sensitive population and should be prioritized. PWSA is in the process of identifying childcare facilities throughout our water service area and determining how many of these locations have a lead or unknown service line that needs to be verified and replaced. We anticipate that there will be between 100 and 150 of these sites. 2. Locations with elevated lead levels – PWSA offers a customer request (CR) sampling program and also conducts sampling in accordance with the Lead and Copper Rule (LCR). Since late 2019, after the implementation of orthophosphate in the drinking water system, PWSA has developed a program (that is still evolving) to investigate locations where the results of the sampling programs indicate elevated levels of lead in drinking water.

<b>COUNTY:</b> FULTON	<b>MTGDATE:</b> 7/23/2021	<b>PROJECT TYPE:</b> WS

**PROJ. DESCRIPTION:** The Authority will be installing approximately 400 linear feet of 48-inch diameter ductile iron contact piping between the plant and storage tank. This will allow the 0.5 million gallon capacity tank to be used for finished water storage.

**PROB. DESCRIPTION:** The Authority is currently using the 0.5 million gallon tank to calculate 1-log Giardia inactivation, while also allowing the tank to float on the distribution system. This type of operation allows finished water to be mixed within the tank with untreated water, which interferes with the unidirectional, plug flow conditions used for Contact Time (CT) calculations.

FEDERAL FY2022 - PROJECT PRIORITY LIST**

**UPDATED JUNE 2, 2022**

<b>APPLICANT NAME:</b> KNOX TWP MA WATER TREATMENT PLANT & SYSTEM UPGRADES PROJECT	<b>REGION:</b> VI	<b>DEP PROJECT RATING:</b> 59
<b>STREET ADDRESS:</b> PO BOX 130	<b>PWSID:</b> 6330008	<b>PROJRANK:</b> 8
<b>CITY:</b> KNOXDALE	<b>FUND SOURCE:</b> DWSRF	<b>PROJECT COST:</b> \$3,320,997
<b>COUNTY:</b> JEFFERSON	<b>MTGDATE:</b> 7/23/2021	<b>PROJECT TYPE:</b> TREAT,DS, METER,

**PROJ. DESCRIPTION:** Authority proposes to replace the water treatment plant in its entirety, installing a tank mixer, and making upgrades to the water system that include meter pit and curb stop installation, replacement of meters with AMR, and replacement of water service lines from the main line to the property line. A new masonry building will be constructed adjacent to the existing WTP. All equipment is proposed to be replaced “like-kind” and there will be no changes to the current treatment process. The new WTP will include a separate chemical room as specified and shown on the drawing. A welded steel factory-built package treatment system includes chemical feed system equipment, manganese greensand filters, water softeners, valves, piping, grating floor drains and appurtenances will be installed as specified. A new 2-inch raw water supply line will be installed from well to the new WTP. The existing supply line from the well to the existing WTP will be abandoned after the new WTP is authorized to operate. Chemicals will be injected into the raw water supply line before the line enters the new treatment room.

**PROB. DESCRIPTION:** The treatment plant is over 25-years old and is also experiencing deterioration and disrepair of existing facilities. The existing softener units do not function properly and are malfunctioning. Additionally, the water treatment plant does not have a generator of their own and currently has an agreement with the Knox Township Volunteer Fire Company to utilize the fire company's generator in the event of an emergency. Also, the standpipe experiences temperature stratification and has a twenty-degree temperature difference. This can lead to water quality issues, such as loss of chlorine residual and tank freezing. In addition, many parts on the manganese green sand filters and softeners are no longer manufactured. While the water treatment plant is still operational, it is becoming increasingly difficult to maintain compliance with the existing equipment reaching the end of its service life. In addition, the existing plant could use upgrades to the electrical and internal plumbing components. Much of the electrical wiring is located within the block walls, making repairs and upgrades difficult. Additionally, the plumbing for the sink is located within the block walls, which sometimes freezes during extreme cold periods. The heating unit for the water treatment plant building frequently fails and malfunctions. Service meters are old and leaking which causes incorrect reading.

<b>CITY:</b> GREENVILLE	<b>FUND SOURCE:</b> STATE BYPASS	<b>PROJECT COST:</b> \$8,980,553
<b>COUNTY:</b> MERCER	<b>MTGDATE:</b> 4/20/2022	<b>PROJECT TYPE:</b> DS, LSL

**PROJ. DESCRIPTION:** GMWA proposes to replace approximately 25,600 L.F. of existing leaded-joint, cast-iron pipe with C900 PVC mains and replacing about 275 service connections, associated hydrants, valves, and appurtenances. Additionally, the Hadley Road Booster pump station will be replaced. The site of the new booster pump station will improve connectivity and hydraulic conditions in the booster pressure zone. The new piping arrangement will reduce water age and increase water quality

**PROB. DESCRIPTION:** This is Phase II of the Authority Lead waterlines replacement. Approximately 25,600 L.F. of existing leaded-joint were identified throughout the distribution system. The aged waterlines are cast-iron and experience frequent breaks. Also, the existing Hadley Road Pump Station building was built in the early 1900s and does not meet current codes due to age. These lead in the distribution system pose a risk to public health and need removed from the system, project will help reduce/eliminate lead from the water supply.

FEDERAL FY2022 - PROJECT PRIORITY LIST**

**UPDATED JUNE 2, 2022**

<b>APPLICANT NAME:</b> LIGONIER TWP. M.A. - WATER SYSTEM IMPROVEMENTS	<b>REGION:</b> V	<b>DEP PROJECT RATING:</b> 59
<b>STREET ADDRESS:</b> 16 OLD LINCOLN HIGHWAY WEST	<b>PWSID:</b> 5650080	<b>PROJRANK:</b> 10
<b>CITY:</b> LIGONIER	<b>FUND SOURCE:</b> DWSRF	<b>PROJECT COST:</b> \$5,525,000
<b>COUNTY:</b> WESTMORELAND	<b>MTGDATE:</b> 7/23/2021	<b>PROJECT TYPE:</b> WS, DS, PS

**PROJ. DESCRIPTION:** The proposed project is a number of upgrades to Ligonier Township Municipal Authority's distribution system. These include the construction of a 250,000-gallon glass-fused-to-steel water storage tank; the construction of four (4) pressure reducing vaults, five (5) new booster pump stations, upgrades to the existing Waterford Waterworks Control Building, installation of new waterline for looping, and the replacement of existing waterline. The project area will include Ligonier Township, Ligonier Borough, and Fairfield Township. These improvements will remedy pressure issues within the system by boosting pressure in low pressure areas, reducing pressure in high pressure areas, and creating distribution main looping to improve service pressures. The new storage tank will also mitigate the impact of high-volume users on the system. The project will result in minimum interruptions to water service due to most of the project involving the construction of new infrastructure.

**PROB. DESCRIPTION:** Ligonier Township Municipal Authority currently owns and operates a public water supply system in Ligonier Township, Ligonier Borough, and Fairfield Township. The Authority is facing issues of aging infrastructure resulting in customer service issues. These issues include low or high pressure, lack of capacity, water losses, lack of redundancy, and general aging of existing distribution infrastructure. Significant users also create large pressure drops during periods of high use. These pressure fluctuations can damage water lines and leave residential users with low pressures. The proposed project is to remedy these issues with a new water tank, new waterline, and additional booster pump stations and pressure reducing stations.

**UPDATED JUNE 2, 2022**

<b>APPLICANT NAME:</b> GALETON BORO AUTH - WATER SYSTEM IMPROVEMENTS	<b>REGION:</b> IV	<b>DEP PROJECT RATING:</b> 58
<b>STREET ADDRESS:</b> 2 SHERMAN STREET	<b>PWSID:</b> 6530010	<b>PROJRANK:</b> 11
<b>CITY:</b> GALETON	<b>FUND SOURCE:</b> STATE BYPASS	<b>PROJECT COST:</b> \$353,908
<b>COUNTY:</b> POTTER	<b>MTGDATE:</b> 1/19/2022	<b>PROJECT TYPE:</b> TREAT

**PROJ. DESCRIPTION:** For the automatic monitoring of the turbidity and chlorine at the water filtration plant which will require work at the water filtration plant and booster station owned by the Galeton Borough Authority. This work includes modifications to piping, relocation of turbidimeters, installation of new turbidimeters and chlorine analyzers, installation of 4 new flow meters, installation of 5 new motor actuated valves, installation of a 1 new precast concrete metering valve vault, installation of new underground piping and 3 valves, new controls in the water filtration building, updating the electrical power distribution, installation of new electrical signal and control wiring, and new underground electrical conduit and wiring. Once all equipment is installed, the Authority's process control integrator will update the existing control panels to work with the new equipment to monitor the chlorine residual and turbidity.

**PROB. DESCRIPTION:** New regulations included in Title 25 Pa. Code Section 109 went into effect in August 2019. These regulations require that Public Water Suppliers must provide automatic monitoring of treated water quality, alarms, and automatic shutdown of water treatment facilities to prevent the delivery of improperly treated water to customers in the event of malfunctions. A Consent Order and Agreement (COA) between the PADEP and Galeton was entered into on April 3rd, 2020, and a Corrective Action Plan (CAP) was finalized on July 17, 2020.

<b>APPLICANT NAME:</b> CITY OF LOCK HAVEN - MODIFICATIONS TO WARREN OHL DAM	<b>REGION:</b> IV	<b>DEP PROJECT RATING:</b> 58
<b>STREET ADDRESS:</b> 20 E CHURCH ST	<b>PWSID:</b> 4180048	<b>PROJRANK:</b> 12
<b>CITY:</b> LOCK HAVEN	<b>FUND SOURCE:</b> STATE BYPASS	<b>PROJECT COST:</b> \$5,000,000
<b>COUNTY:</b> CLINTON	<b>MTGDATE:</b> 4/20/2022	<b>PROJECT TYPE:</b> DAM

**PROJ. DESCRIPTION:** The City of Lock Haven is planning on completing upgrades and improvements to the existing Ohl Dam. The project will consist of construction of the dam crest parapet wall and raising spillway walls, replacement of the spillway terminal structure, replacement of the intake bridge, construction of a lower reservoir access road, and construction of a structure above the intake tower to house the valve operators. Rehabilitation of the existing spillway chute including repairs to the spillway slab and replacement of the sections of the spillway walls where applicable will take place. The project will also include rehabilitation of the intake tower including the new gate valves and repair of any necessary concrete.

**PROB. DESCRIPTION:** This project intends to address issues found in the October 2016 Ohl Dam Evaluation Report. The report concluded that "The intake structure, gates, valves, equipment and access bridge should be renewed or replaced due to their age, deterioration and expected usefulness. The bridge, piers and bearing at the upper portion of the intake structure are no longer structurally sufficient and should be replaced. The intake structure below normal water level must be either repaired or modified to be a "wet" intake structure, through the use of new slide gates and wall openings. Under further recommendation that the spillway slab and portions of the walls be repaired or replaced where applicable." The proposed project will strengthen the dam and will improve safety of the downstream population and improve consistent raw water source for the City of Lock Haven.

<b>APPLICANT NAME:</b> CURRYVILLE WATER AUTHORITY INTERCONNECTION AND WATER TANK REHAB	<b>REGION:</b> III	<b>DEP PROJECT RATING:</b> 55
<b>STREET ADDRESS:</b> BOX # 11	<b>PWSID:</b> 4070298	<b>PROJRANK:</b> 13
<b>CITY:</b> CURRYVILLE	<b>FUND SOURCE:</b> DWSRF	<b>PROJECT COST:</b> \$2,389,000
<b>COUNTY:</b> BLAIR	<b>MTGDATE:</b> 1/19/2022	<b>PROJECT TYPE:</b> DS,WS

**PROJ. DESCRIPTION:** The proposed project involves a one-way, permanent interconnection between CWA (recipient) and MMA (supplier). MMA has four wells and chlorinates the water. The agreement between the two authorities allows for a maximum flow to CWA of up to 200 gpm and a cumulative thirty-day volume not to exceed 375,000 gallons. The interconnection with MMA would be the sole source of water for CWA. With the interconnection as a sole source, the following would be discontinued: the Kegarise Well, the existing 12-inch diameter loops for 4-log disinfection, and the existing nitrate treatment. The existing chlorine monitoring and treatment would be repurposed to add a booster injection, since the supplied water from MMA would already have a chlorine residual. The existing storage tank would remain and be repainted as part of the project.

**PROB. DESCRIPTION:** The Curryville Water Authority (CWA) interconnection with Martinsburg Municipal Authority (MMA) is proposed as the most cost-effective solution to eliminate the existing well. According to CWA, the existing well (Kegarise Well) has been impacted by the agricultural industry and is seeing an increase in nitrates. The existing nitrate treatment would need to be upgraded or a new source of water that is not impacted with nitrates would need to be found. Project will help system to serve consistent potable water to the service area.

<b>COUNTY:</b> CARBON	<b>MTGDATE:</b> 4/20/2022	<b>PROJECT TYPE:</b> SRC

**PROJ. DESCRIPTION:** The Hazleton City Authority (HCA) operates and maintains an existing, below grade, 5.0 Million Gallons Per Day (MGD) raw water pumping station on the banks of the Lehigh River within a PA DCNR State Park and National Heritage Corridor. On August 22, 2021, a severe and unusual storm event within the Lehigh River Basin resulted in extremely high river water levels and flooded the station resulting in catastrophic fire damage. The station has been off-line since the event. The Lehigh River Pumping station being off-line impacts HCA's ability to meet customer demand, safe yield and drought contingency plans. The proposed project consists of complete demolition, cleaning the station, repairing damage to interior surfaces, priming/painting, and replacing all damaged and/or failed equipment in-kind (including the 5 MGD pumps and electrical components) and relocating the transformer above grade to prevent future issues. Relocating the entire station above grade is not an option due to its location in the state park and Heritage Corridor. The pumping station is a critical component of HCA's PWS system and is vital to meeting safe yields, customer demands, and is a key component in their drought planning for the system. This project will allow HCA to continue to operate and maintain system facilities and to continue to meet regulatory requirements

**PROB. DESCRIPTION:** A severe and unusual storm event within the Lehigh River Basin resulted in extremely high river water levels, which was several feet above the finished floor elevation of the pump station and flooded the station. Water reached the high voltage transformers and created a sudden short circuit, exploded and cut the power to the station. The high water level, explosion, voltage spike, short circuit, high temperature and corrosive/moist atmosphere resulted in significant damage throughout the station. The station has been inoperable since the event, impacting HCA's ability to meet customer demand, safe yield and drought contingency plans. The intent of this project is to complete demolition, clean the station, repair damage to interior surface, prime/paint, and replace all damaged and/or failed equipment in-kind and relocate the transformer above grade to prevent future issues. Relocating the entire station above grade is not an option due to its location in the state park and Heritage Corridor. The pumping station is a critical component of HCA's PWS system and is vital to meeting safe yields, customer demand, and is a key component in their drought planning strategy for the system. This project will allow HCA to continue to operate and maintain system facilities as the station has been off-line since the catastrophic event.

FEDERAL FY2022 - PROJECT PRIORITY LIST**

**UPDATED JUNE 2, 2022**

<b>APPLICANT NAME:</b> WIFTA PARTIAL - SOMERSET BOROUGH MUN AUTH - WATER SYSTEM IMPROVEMENTS	<b>REGION:</b> V	<b>DEP PROJECT RATING:</b> 53
<b>STREET ADDRESS:</b> 340 WEST MAIN STREET	<b>PWSID:</b> 4560042	<b>PROJRANK:</b> 15
<b>CITY:</b> SOMERSET	<b>FUND SOURCE:</b> DWSRF	<b>PROJECT COST:</b> \$20,000,000
<b>COUNTY:</b> SOMERSET	<b>MTGDATE:</b> 10/20/2021	<b>PROJECT TYPE:</b> DS, WS, METERS

**PROJ. DESCRIPTION:** The proposed project includes the replacement of approximately 40,000 linear feet of water distribution line, demolition of the Laurel Hill Filtration Plant (LHFP), improvement of the Shaffer Run WTP, installation of standby generators at all critical facilities (North Somerset Pump Station, Coxes Creek WTP, Shaffer Run Well 2, Coxes Creek Well 7, and Coxes Creek Well 8), installation of a new 1 MG water storage tank, demolition and site restoration of the Laurel Hill Filtration Plant, replacement of approximately 554 water meters and installation of two solar panel systems. WIFTA Summary: The components of the project specifically addressing lead removal include the replacement of 900 linear feet of 16" transmission main, 365 linear feet of 12" distribution line, 1,800 linear feet of 6" distribution line, 462 residential metered connections, and 14 large diameter metered connections. The total cost of these work items is \$2,217,750. The total project cost is \$20,000,000. Therefore, approximately 10% of the total project cost will include lead removal measures.

**PROB. DESCRIPTION:** The project proposes to address problems related to unaccounted-for water, energy consumption, aging infrastructure, and removal of lead. MABS currently has a 20% unaccounted-for water requirement stipulated by Water Allocation Permit (56-1011) and has an unaccounted-for water percentage in excess of 30%. MABS regularly experiences breaks and leaks related to aging infrastructure. MABS is aware of several transmission lines, distribution lines, water meters, and valves which contain lead. Energy demands of the current water system are inefficient and in excess of what is needed to supply the system with water. The project will work to significantly reduce energy consumption related to the production and supply of water.

FEDERAL FY2022 - PROJECT PRIORITY LIST**

**UPDATED JUNE 2, 2022**

<b>APPLICANT NAME:</b> HAZLETON CITY AUTHORITY SR 940 UPGRADE PROJECT	<b>REGION:</b> II	<b>DEP PROJECT RATING:</b> 53
<b>STREET ADDRESS:</b> 400 E. ARTHUR GARDNER PARKWAY	<b>PWSID:</b> 2408001	<b>PROJRANK:</b> 16
<b>CITY:</b> HAZLETON	<b>FUND SOURCE:</b> DWSRF	<b>PROJECT COST:</b> \$19,835,000
<b>COUNTY:</b> LUZERNE	<b>MTGDATE:</b> 1/19/2022	<b>PROJECT TYPE:</b> DS

**PROJ. DESCRIPTION:** Hazleton City Authority (HCA) proposes significant upgrades to their existing distribution system along State Route 940 from the Village of Harleigh to the Village of Drifton in Luzerne County and in Mahanoy Township, Schuylkill County to address high (36%) unaccounted for water losses, improve fire protection and system pressure and improve service to existing customers. The Project includes the installation/replacement of approximately 34,000 lineal feet of new distribution system piping and all necessary appurtenances (12-inch, 8-inch and 6-inch valves, shut-offs, hydrants (53), blow-offs, service laterals, etc.). Work will include transferring/replacing services from existing mains of various sizes to the new water main. Interconnections within the system will also be made between existing pipe mains at various locations to improve system pressure and fire protection capabilities. Work also includes a new tie in and pressure regulating station at the existing HCA Highland Finished Water Storage Tank to replace an older PRV station as well as a new pressure regulating station near Oakmont Road to serve the Ebervale. The improvements will enhance HCA's ability to operate and maintain their existing PWS facilities.

**PROB. DESCRIPTION:** HCA proposes an extensive distribution system replacement project to address high (36%) unaccounted for water losses, improve fire protection and system pressure to improve service to existing customers. Old cast iron, steel and ductile iron pipe have many years of tuberculation built up resulting in poor water flow, poor pressure, dirty water, decrease in water quality, and difficulty in leak location and repair. Current pipe flow capacity essentially does not provide fire flow to adequately protect this service area. To address these issues, approximately 34,000 linear feet of primarily 8-inch and 12-inch pipe with all necessary appurtenances including but not limited to hydrants (53), shut-offs, valves (6-inch, 8-inch and 12-inch), blow-offs, pressure reducing valves (PRV), service laterals, etc. are proposed for installation in Hazle Township and the City of Hazleton in Luzerne County and in Mahanoy Township, Schuylkill County. Locations proposed include Harleigh Village along State Road (S.R.) 940, Harleigh Village Main Street, Ebervale Village, Oakmont to Ebervale, West Oakdale Village, Middletown Village, Village of Japan Jeddo, South of S.R. 940 – Village of Japan Jeddo, Jeddo Borough to Tank Access Road, Tank Access Road to Eckley PRV Pit, Japan Jeddo to Drifton, Village of Drifton, Village of Park Place, S.R. 93 Newport Drive to Melrose Street, and Muir Avenue – Poplar Street to Carleton Avenue. The proposed modifications will improve HCA's ability to operate and maintain their system and increase the reliability of service. Also, by replacing the leaking distribution piping, a savings in water will be realized.

FEDERAL FY2022 - PROJECT PRIORITY LIST**

**UPDATED JUNE 2, 2022**

<b>APPLICANT NAME:</b> HAZLETON CITY AUTHORITY 2022 OPERATIONAL UPGRADES PART "A"	<b>REGION:</b> II	<b>DEP PROJECT RATING:</b> 53
<b>STREET ADDRESS:</b> 400 E. ARTHUR GARDNER PARKWAY	<b>PWSID:</b> 2408001	<b>PROJRANK:</b> 17
<b>CITY:</b> HAZLETON	<b>FUND SOURCE:</b> DWSRF	<b>PROJECT COST:</b> \$3,300,000
<b>COUNTY:</b> LUZERNE	<b>MTGDATE:</b> 4/20/2022	<b>PROJECT TYPE:</b> PS

**PROJ. DESCRIPTION:** he project's scope of work includes the replacement and relocation of twelve (12) existing pressure regulating valves (PRVs) currently located in below grade pits to above grade installations. Valve sizes and control sequences to supply potable water to the customers will not change. This project eliminates numerous confined space safety issues and allows remote monitoring and control via connection to the existing SCADA system. HCA proposes to purchase additional leak detection equipment to address high unaccounted for water loss of 36% in their distribution system. HCA intends to purchase fixed base radio read equipment (AMR system) as an upgrade to their existing drive by radio read system components to improve read efficiency, provide more and transparent data to all customers and improve monitoring for leaks in customers' facilities. Lastly, HCA intends to install a new domestic water pressure booster pump to address and correct low pressure issues experienced in their existing Administration Building located at the filtration plant site. Improvements will enhance HCA's ability to operate and maintain the system and increase the system's reliability for customers.

**PROB. DESCRIPTION:** The Hazleton City Authority (HCA) operates and maintains a water filtration plant and distribution system serving the Greater Hazleton Area. The water treatment plant was constructed in 1991 and HCA completed a detailed study which identified several deficiencies in the system. Problems identified which are addressed in this application include high unaccounted for water loss (36%); aging and deteriorated distribution system components, specifically 12 below grade pressure regulating valves (PRVs) in distribution; aging drive by radio read meter equipment to be upgraded to a fixed base radio system (AMR system) to enhance remote read capability and operational efficiencies; and the installation of a domestic booster pump to correct low-pressures experienced in the existing Administration Building at the site.

<b>APPLICANT NAME:</b> PHILADELPHIA CITY - BAXTER CLEARWELL BASIN	<b>REGION:</b> I	<b>DEP PROJECT RATING:</b> 50
<b>STREET ADDRESS:</b> 1101 MARKET STREET	<b>PWSID:</b> 1510001	<b>PROJRANK:</b> 19
<b>CITY:</b> PHILADELPHIA	<b>FUND SOURCE:</b> DWSRF	<b>PROJECT COST:</b> \$125,000,000
<b>COUNTY:</b> PHILADELPHIA	<b>MTGDATE:</b> 4/20/2022	<b>PROJECT TYPE:</b> TREAT

**PROJ. DESCRIPTION:** The Philadelphia Water Department is proposing to construct two new, 5MG, below grade, two chamber clearwell basins equipped with green roof tops, to be known as Clearwell Basins 3&4. The basins will be constructed adjacent to Clearwell Basins 1&2, which are currently under construction. Each basin will have a volume of 5 MG, with a total volume of 20 MG which replaces the existing, oversized 50 MG clearwell, which has an effective volume of 20 MG. The new clearwells will feed the existing Torresdale and Lardner's Point Pump Station, providing redundancy and operational flexibility to the system.

**PROB. DESCRIPTION:** Philadelphia Water Department owns and operates the 120 year old Baxter Water Treatment Plant. The plant utilizes a single oversized, 120 year old, 50 million gallon clearwell to provide water to the Torresdale and Lardner's Point Pump Stations. The clearwell does not provide operational flexibility for maintenance or during an emergency event. Project will help manage consistent potable water to the service area.

<b>COUNTY:</b> DAUPHIN	<b>MTGDATE:</b> 4/20/2021	<b>PROJECT TYPE:</b> DS, DAM, METER

**PROJ. DESCRIPTION:** This is a Programmatic Finance project with multiple phases. Phase 1 - This project phase will replace approximately 6,300 linear feet of water main in the Allison Hill neighborhood of Harrisburg which have observed performance deficiencies. Associated pipes, valves and hydrants will also be replaced. Phase 2 - The project phase will rehabilitate approximately 3,500 ft of 20 inch diameter cast iron pipe with a cured-in-place lining along portions of Cameron Street, which has experienced numerous water main breaks and broken valves. Associated pipes, valves and hydrants will also be replaced. Phase 3 - This project phase will replace the existing radio read system with a remote read system consisting of new base stations, and approximately 20,000 customer water meters. Phase 4 - The project phase will provide improvement to bring the dam spillway into regulatory compliance. Installation of piping at the toe to collect and monitor seepage and raising the embankment with a parapet to protect against wave action during flood events.

**PROB. DESCRIPTION:** he system has been experiencing performance deficiencies in portions of their distribution system. System also experience issues with water use data collection and an inadequate spillway capacity and other regulatory deficiencies at their Dehart Dam.

<b>APPLICANT NAME:</b> WIFTA MINERSVILLE LEAD LINE REPLACEMENT PROJECT	<b>REGION:</b> II	<b>DEP PROJECT RATING:</b> 42
<b>STREET ADDRESS:</b> 2 E SUNBURY ST	<b>PWSID:</b> 3540035	<b>PROJRANK:</b> 33
<b>CITY:</b> MINERSVILLE	<b>FUND SOURCE:</b> DWSRF	<b>PROJECT COST:</b> \$2,745,100
<b>COUNTY:</b> SCHUYLKILL	<b>MTGDATE:</b> 10/20/2021	<b>PROJECT TYPE:</b> DS

**PROJ. DESCRIPTION:** The Minersville Water Authority proposes the replacement of approximately 6,500 liner feet of 6-inch to 8-inch cast iron water mains in the Borough of Minersville, Schuylkill County containing lead joints. Replacements are planned in the areas of Forbes Street, Jones Street, Third Street and North Street in the Borough of Minersville, Schuylkill County. Estimated lengths are 215 feet on Fourth Street; 1,200 feet on Jones Street; 1,315 feet on Third Street; and 3,770 feet on North Street. Dual mains are proposed on North Street in order to improve system functionality, avoid utility conflicts, limit restoration, and shorten customer service lines from approximately 40 feet each to approximately 10 feet each. These areas are known from past experience with repairs in the areas to be replaced. They are also proposing the replacement of approximately 150 existing service lines in these areas from the main to the curb stop. The existing corporations and curb stops are pre-1986 construction and therefore do not meet today's standards for lead free fittings. The proposed project will include all necessary water line appurtenances associated with the watermains and service line replacements such as valves, shut-offs, water main construction, manways, etc. Found necessary during the water mains and service line replacements and installation. The improvements will enhance Minersville's ability to operate and maintain the system and increase the reliability of service.

**PROB. DESCRIPTION:** Existing cast iron water mains identified as part of this project are older and may contain lead joints based on past repairs conducted in the area. Removal and replacement of the water mains with lead joints and the service lines which do not meet today's standards for lead free fittings is desired and considered necessary in order to ensure continued compliance with the Department's Lead and Copper Rule, Title 25 Chapter 109, Subchapter K.

<b>COUNTY:</b> ERIE	<b>MTGDATE:</b> 7/23/2021	<b>PROJECT TYPE:</b> LSL

**PROJ. DESCRIPTION:** The project will include the replacement of approximately 1,300 existing service connections, from existing water mains in the City of Erie, Lawrence Park Township, and Wesleyville Borough. Service connections to be replaced consist of wrought iron pipe which is attached to water mains by lead 'goosenecks', the short-curved section of pipe between the water main and the property line curb box. The work will include the associated excavation, backfill, and restoration necessary to replace the leaded gooseneck service connections.

**PROB. DESCRIPTION:** Authority has identified the presence of lead goosenecks within some of the aged wrought iron water distribution service lines, specifically in Lawrence Park Township, Millcreek Township, and Wesleyville Borough. These wrought iron service connections are connected to the water main by a lead gooseneck between the corporation stop and the curb stop on the utility owned or public side.

FEDERAL FY2022 - PROJECT PRIORITY LIST**

**UPDATED JUNE 2, 2022**

<b>APPLICANT NAME:</b> WIFTA - LINESVILLE BOROUGH - EAST ERIE STREET LEAD LINE ABATEMENT	<b>REGION:</b> VI	<b>DEP PROJECT RATING:</b> 37
<b>STREET ADDRESS:</b> 103 W. ERIE STREET	<b>PWSID:</b> 6200027	<b>PROJRANK:</b> 47
<b>CITY:</b> LINESVILLE	<b>FUND SOURCE:</b> DWSRF	<b>PROJECT COST:</b> \$1,073,220
<b>COUNTY:</b> CRAWFORD	<b>MTGDATE:</b> 10/20/2021	<b>PROJECT TYPE:</b> DS, LSL

**PROJ. DESCRIPTION:** Propose project will abandon approximately 2040 linear feet of existing 4-inch diameter Cast Iron line, with a new 2040 LF of 8-inch diameter PVC C-900 pipe to be installed under the current side walk due to utility conflicts and being able to keep the existing line in service during construction.  
-Project also replace all service lines on the Borough side of curb stop, replace all curb stops, remove & replace lead component fire hydrant, replace any residential lead service lines found during construction, connect to existing lines.

**PROB. DESCRIPTION:** The system was installed in the early 1900's with a cast iron mainline piping material with lead mainline joint material and lead gooseneck piping to service connections. There are currently 26 residences connected to the existing 4-inch diameter cast iron line on East Erie Street to the intersection with Chestnut Street. There is one fire hydrant on the cast iron water line contains lead component.

FEDERAL FY2022 - PROJECT PRIORITY LIST**

**UPDATED JUNE 2, 2022**

<b>APPLICANT NAME:</b> WIFTA- FORD CITY BOROUGH- BC3 & 3RD AVENUE WATERLINE REPL.	<b>REGION:</b> VI	<b>DEP PROJECT RATING:</b> 35
<b>STREET ADDRESS:</b> P.O. BOX 112, NEALE AVE	<b>PWSID:</b> 5030005	<b>PROJRANK:</b> 48
<b>CITY:</b> FORD CITY	<b>FUND SOURCE:</b> STATE BYPASS	<b>PROJECT COST:</b> \$1,560,500
<b>COUNTY:</b> ARMSTRONG	<b>MTGDATE:</b> 10/20/2021	<b>PROJECT TYPE:</b> DS

**PROJ. DESCRIPTION:** Install 3,700 linear feet of C-900 PVC watermains, new lead free service connections and fittings and 3 new fire hydrants along 3rd & 4th Avenues and 11th Street in Ford City Borough

**PROB. DESCRIPTION:** Lead joint cast iron pipe, service connections and fittings which have experienced breaks and leaks are to be replaced so to reduce the health concern to Borough customers and improve system reliability.

<b>POPULATION:</b> 2,991	<b>PV RATING:</b> 54
<b>GREEN PROJECT:</b> No	<b>GREEN CATEGORY:</b> N/A
<b>BUSINESS CASE:</b> N/A	<b>GREEN AMOUNT:</b> \$0

<b>APPLICANT NAME:</b> HASTINGS MA- SPANGLER ST. & 3RD AVE. LINE REPL. WIFTA	<b>REGION:</b> V	<b>DEP PROJECT RATING:</b> 35
<b>STREET ADDRESS:</b> P.O. BOX 559	<b>PWSID:</b> 4110013	<b>PROJRANK:</b> 49
<b>CITY:</b> HASTINGS	<b>FUND SOURCE:</b> DWSRF	<b>PROJECT COST:</b> \$2,054,884
<b>COUNTY:</b> CAMBRIA	<b>MTGDATE:</b> 7/23/2021	<b>PROJECT TYPE:</b> DS, LSL

**PROJ. DESCRIPTION:** Hastings is applying to PENNVEST as part of the WIFTA PENNVEST Lead Service Line Replacement Initiative. The project will consist of Hastings removing the existing distribution main with lead joints, and replacing it with new ductile iron main. The project will remove and replace approximately 6200' of distribution main, as well as hydrants and other appurtenances. Note that PENNVEST will not support the partial replacement of lead service lines.

**PROB. DESCRIPTION:** Hastings Municipal Authority currently owns and operates a Public Water Supply system in Hastings Borough in Cambria County. Piping within Hastings' distribution system contains lead joints. These lead joints pose a risk to public health and need removed from the system. Hastings will remove and replace the existing distribution main.

<b>APPLICANT NAME:</b> ERIE CITY WATER AUTHORITY - SERVICE LINE REPLACEMENT	<b>REGION:</b> VI	<b>DEP PROJECT RATING:</b> 0
<b>STREET ADDRESS:</b> 340 WEST BAYFRONT PARKWAY	<b>PWSID:</b> 6250028	<b>PROJRANK:</b> 60
<b>CITY:</b> ERIE	<b>FUND SOURCE:</b> DWSRF	<b>PROJECT COST:</b> \$7,000,000
<b>COUNTY:</b> ERIE	<b>MTGDATE:</b>	<b>PROJECT TYPE:</b> DS

**PROJ. DESCRIPTION:** Erie City Water Authority is proposing to replace or abandon (for those services which are inactive) approximately 1,400 total service connections within the City of Erie over a period of approximately one year (2023). Selection of the service connections to be replaced is based on myriad factors including focusing on areas of densely concentrated service connections and disadvantaged areas of the City of Erie as documented by the University of Wisconsin Neighborhood Atlas.

**PROB. DESCRIPTION:** Erie Water Works (EWW) has approximately 9,000 wrought iron service connections within its distribution system, the remaining majority of which are located in the City of Erie. These wrought iron service connections are attached to the water main by a lead gooseneck between the corporation stop and the curb stop on the utility owned "public side". EWW has maintained a service connection replacement program for over 17 years to replace these water services as part of its overall capital improvements program. EWW typically replaces about 200 to 300 each year, often coordinating in advance of planned state or municipal paving projects in order to minimize restoration expenses. Many of these service connections, when excavated, are found to be deteriorated, corroded, and often leaking. In some cases, leaks are so significant that replacement becomes necessary for that reason alone.

DRINKING WATER STATE REVOLVING FUND  
FEDERAL FY2022 - PROJECT PRIORITY LIST**

**UPDATED JUNE 2, 2022**

<b>APPLICANT NAME:</b> PITTSBURGH WATER & SEWER AUTHORITY - WIFIA/PROFI	<b>REGION:</b> V	<b>DEP PROJECT RATING:</b> 0
<b>STREET ADDRESS:</b> 441 SMITHFIELD ST.	<b>PWSID:</b> 5020038	<b>PROJRANK:</b> 61
<b>CITY:</b> PITTSBURGH	<b>FUND SOURCE:</b> DWSRF	<b>PROJECT COST:</b> \$209,005,329
<b>COUNTY:</b> ALLEGHENY	<b>MTGDATE:</b>	<b>PROJECT TYPE:</b> DS, PS, TREAT

**PROJ. DESCRIPTION:** Pittsburgh Water and Sewer Authority (PWSA) is coming in for a WIFIA Pro-Fi project that consists of 6 projects spread over 4 phases. Phase 1 includes the Rising Main 4 project. Phase 2 consists of the Lanpher Rising Main project. Phase 3 consists of the Bruecken Pump Station Improvements Project, Aspinwall Pump Station Improvements Project, and the Clearwell Emergency Bypass project. Phase 4 consists of the Clearwell Improvement Project. Phase 1 is rehabilitation and replacement of about 4,500 linear feet of transmission main (Highland Rising Main 4) between Bruecken Pump Station and Highland Reservoir No. 2. Phase 2 is a redundant water transmission main (Lanpher Rising Main) beginning from the Aspinwall Pump Station to the Lanpher Reservoir. A new Lanpher Rising Main will entail about 21,700 LF of new 48-inch diameter DIP installed by open cut construction; 1,650 LF of new 36-inch diameter DIP installed by trenchless construction techniques; new in-line 48-inch gate valves and new air relief valve chambers; and ancillary improved surface restoration. Phase 3 will involve construction of a new 75 MGD pumping station to replace the existing Bruecken pump station. Replacement of four existing pumping units and associated piping, valves and electrical gear. at the Aspinwall treatment plant for a new pumping capacity of 45 MGD. The clearwell project includes construction of a large in-ground reinforced concrete conduit, ranging in size from 8 to 12 feet in diameter and approximately 1,500 feet in length, to convey treated water around the existing plant clearwell under planned or emergency conditions. The project will require constructing new fluoride chemical feed and storage facilities in a new building and new inlet and outlet buildings with mechanical gates. Phase 4 will include bringing the existing clearwell up to current design standards. The design of the new clearwell will also ensure the appropriate disinfection contact times are efficiently met, with the flexibility to bypass cells to perform any required maintenance without taking the clearwell offline completely.

**PROB. DESCRIPTION:** PWSA has entered into a Consent Order and Agreement (COA) dated September 6, 2019 with the Commonwealth of Pennsylvania, Department of Environmental Protection. The clearwell was constructed in 1908 and has not undergone any major modifications or upgrades since its original construction. A main goal of the project is providing sufficient retention contact time for disinfection to meet the requirements of the Surface Water Treatment Rule and Long-Term 2 Enhanced Surface Water Treatment Rule. Reliable and sustainable pumping performance will provide and maintain water quality of the finished product to customers. It will also reduce potential disruption and contamination of the water supply by reducing risk of leaks and pipe failure. The age of the Bruecken and Aspinwall Pump Station pumps and equipment can lend to failures, which could lead to compliance issues.
