# WATER AUDIT PROCEDURE 

## FOR

## LARGE WATER CONSUMERS

## INTRODUCTION

This Water Audit Procedure has been developed by the Department of Environmental Protection, Division of Water Use Planning to guide large water consumers in estimating the water and energy savings that can be realized as a result of installing low flow plumbing fixtures and reducing potable water consumption. The procedure consists of four stages:

## Background Information

## Savings

## Investment

## Return on Investment

This Water Audit Procedure is intended to serve as a guide for facility management personnel who wish to conduct their own audit. By completing the calculations on the following pages, facility managers will be able to anticipate the capital and labor costs of a plumbing refit program and predict the monetary savings that will result from water conservation measures. Since water-use characteristics and the types of plumbing fixtures vary, some assumptions are necessary when working through the calculations. The Department has provided water consumption data and other information, based on past experience, that is necessary to complete the audit. However, since these assumptions will result in conservation savings figures, actual data should be incorporated wherever possible to improve the accuracy of the results.

## BACKGROUND INFORMATION

Utility Rates

Facility Names:

Number of Users: $\qquad$

Water Utility: $\qquad$

Sewage Utility: $\qquad$

## Energy Utility:

Water Cost per 1000 gallons: \$ ..... $/ 1000 \mathrm{gal}$.
Sewage Cost per 1000 gallons: \$ ..... $/ 1000 \mathrm{gal}$.
Cost to raise 1000 gallons $80^{\circ} \mathrm{F}$ : \$ ..... $/ 1000 \mathrm{gal}$.

## BACKGROUND INFORMATION Water Heating Energy Costs

| Electricity <br> $\mathbf{\$ / k w h}$ | Cost to Raise <br> $\mathbf{1 0 0 0}$ Gallons $\mathbf{8 0}{ }^{\circ} \mathbf{F}$ |
| :---: | :---: |
| 0.07 | 13.69 |
| 0.08 | 15.65 |
| 0.09 | 17.61 |
| 0.10 | 19.57 |
| 0.11 | 21.53 |
| 0.12 | 23.49 |
|  |  |
| Natural Gas | Cost to Raise |
| $\mathbf{\$ / m c f}$ | $\mathbf{1 0 0 0}$ gallons $\mathbf{8 0} \mathbf{F}$ |
| 4.00 | 2.67 |
| 5.00 | 3.34 |
| 6.00 | 4.00 |
| 7.00 | 4.67 |
| 8.00 | 5.34 |
| 9.00 | 6.00 |
| 10.00 | 6.48 |

| Fuel Oil <br> $\$ /$ gal | Cost to Raise <br> $\mathbf{1 0 0 0}$ gallons $\mathbf{8 0} \mathbf{F}$ |
| :---: | :---: |
| 0.50 | 2.40 |
| 0.60 | 2.89 |
| 0.70 | 3.36 |
| 0.80 | 3.84 |
| 0.90 | 4.32 |
| 1.00 | 4.80 |

| Coal <br> $\$ /$ ton | Codst to Raise <br> $\mathbf{1 0 0 0}{ }^{\circ}$ Gallons $\mathbf{8 0}{ }^{\circ} \mathbf{F}$ |
| :---: | :---: |
| 40.00 | 1.03 |
| 60.00 | 1.54 |
| 80.00 | 2.06 |
| 100.00 | 2.57 |
| 120.00 | 3.08 |
| 140.00 | 3.60 |

## BACKGROUND INFORMATION

## Determine Plumbing Fixture Flow Rates

Showerheads and Faucets:

To obtain showerhead and faucet flowrates, measure the time necessary for the fixture with both controls open to fill a container. Compare the average of five such test results with the table below:

| Time Required <br> to Fill <br> Container (sec) | 1 Gallon | Flowrate <br> (gal/min) <br> $\mathbf{1 / 2}$ Gallons | Quart |
| :---: | :---: | :---: | :---: |
| 60 | 1 | 0.5 | 0.25 |
| 30 | 2 | 1.0 | 0.5 |
| 20 | 3 | 1.5 | 0.75 |
| 15 | 4 | 2.0 | 1.0 |
| 12 | 5 | 2.5 | 1.25 |
| 10 | 6 | 3.0 | 1.5 |
| 8.6 | 7 | 3.5 | 1.75 |
| 7.5 | 8 | 4.0 | 2.0 |
| 6.7 | 9 | 4.5 | 2.25 |
| 6 | 10 | 5.0 | 2.5 |

Since measurements of toilet and urinal flush volumes are difficult to obtain, use the typical flush volumes provided on page 6 . However, in all cases, use manufacturer's information if available.

## BACKGROUND INFORMATION <br> Flow Rate Tabulation

| Fixture | Number of Fixtures | Average Flow <br> Rate/Flush Volume |
| :--- | :--- | ---: |
| Flush Tank Toilets |  |  |
|  |  | gal/flush |$|$| gal/flush |
| :--- |
| Flush Valve Toilets |
