

2024 PM2.5 Year in Review (Updates on Designations and Exceptional Events Too)

Bureau of Air Quality
5/22/2025

Agenda

- DEP's PM2.5 Designation Process
- DEP's PM2.5 Exceptional Event Process
- 2024 PM2.5 Year in Review
 - A review of the meteorology
 - PM2.5 Concentration Data
- Next Steps

Pennsylvania

Environmental Protection

DEP's PM_{2.5} Designation Process

DEP's PM_{2.5} Designation Process

- On February 7, 2024, EPA signed the final rule for a new PM_{2.5} NAAQS, revising the primary annual standard to 9.0 µg/m³ and retaining the primary 24-hour standard to 35 µg/m³.
- EPA finalized 2023 PM_{2.5} design values in August 2024. DEP used these 2023 PM_{2.5} design values for its designation purposes.
- In its plan, DEP used five factors (air quality data, emissions data, meteorology data, geography/topography data and jurisdictional boundary data) to define its proposed PM_{2.5} nonattainment areas.
- The result: DEP proposed four areas in the Commonwealth for nonattainment area designation.
- DEP went out for public comment on its recommended PM_{2.5} designation from December 21, 2024 until January 28, 2025.

DEP's PM2.5 Designation Process

Facts about the public comment period:

- DEP extended the public comment period due to a request that was submitted.
- In total, DEP received 24 public comments.
- Public comments were submitted from Pennsylvania citizens in addition to different environmental organizations, including from Allegheny County Clean Air Now, Breathe Project, Carnegie Mellon University's CREATE Lab, Clean Air Council, Environmental Health Project, Environmental Integrity Project, Group Against Smog and Pollution, PennEnvironment Research and Policy Center, PennFuture, and Protect PT.
- Final comment and response document will be published to DEP website once approved for publication.

DEP's PM2.5 Designation Process – Final 2023 Annual DV

Appearing in Blue - 2023 Annual PM_{2.5} Design Values At or Below the Standard of 9.0 µg/m³

Asterisk (*) appearing to the right of the design value means the data is incomplete during 3-year period.

DEP's PM_{2.5} Exceptional Event Process

DEP's PM2.5 Exceptional Event Process

- Coinciding with the 2024 PM2.5 NAAQS designation process, DEP embarked on a PM2.5 exceptional event analysis.
- The events focused on two different time periods in June 2023: June 6 – June 8 and June 28 – July 1. Both events were centered on wildfires in eastern Canada (Quebec province).
- DEP focused the analysis on three sites: Avalon (ACHD), York (DEP), Ritner (PAMS).
- Result: the analysis demonstrated that if the PM2.5 data from the two events were excluded for determination of the compliance with the 2025 PM2.5 NAAQS, the three sites would no longer be exceeding the 2025 PM2.5 NAAQS based on the 2023 PM2.5 design value period, thereby meeting the “regulatory significance” requirement of completing an exceptional event analysis.
- The exceptional event analysis went out for public comment from February 15, 2025 to March 17, 2025. DEP received no public comments.

2024 PM2.5 Monitoring Summary

- PM2.5 monitoring season – Year-round
- Overview of the 2024 design value (DV) for the 24-hour and annual PM2.5 national ambient air quality standard (NAAQS) continuous monitors:
 - 2024 24-hour DV calculation – 98th percentile value from 2022, 2023, and 2024 averaged over a 3-year period.
 - 2024 annual DV calculation – Annual average calculated from quarterly (January – March, and so on) averages. Annual average for 2022, 2023, and 2024 averaged over a 3-year period.

Environmental Protection

Number of 24-hour PM2.5 Exceedances

Number of PM2.5 exceedance days and total number of exceedances per year within Pennsylvania's PM2.5 monitoring network (~46 total monitors):

- 2022: XX days | XX total exceedances
- 2023: XX days | XX total exceedances
- 2024: XX days | XX total exceedances

■ - Final values are being tallied.

Next Steps

Image Source: <https://www.istockphoto.com>

- DEP early certified its 2024 PM_{2.5} data for consideration for the PM_{2.5} designation process.
- We await decisions at the federal level about our PM_{2.5} recommended designations and our PM_{2.5} exceptional event analysis.
- If current PM_{2.5} annual NAAQS stays at 9.0 µg/m³, we will reevaluate the need for additional exceptional event analyses (that may now be “regulatory significant”) with respect to the June 2023 wildfire event.
