

## May 2021 e-permitting Release Notes

### All Program areas

ID	Title	Description
62256	Internal Advance Search page- All programs- update to Instructions regarding wildcard searching	<p>Instructions for the wildcard searching needs to be updated to provide proper instruction on fields where wildcard searching will be successful. Instructions should be updated to be:</p> <p>Wildcard searching can be used on most alphanumeric fields, meaning text and permit numbers. Wildcard search is not available for authorization ID, date fields or drop down lists. Wildcard fields are % for 1 character and * for multiple characters.</p>
61412	Support Microsoft Edge	The Office of Administration has deemed that Internet explorer is no longer the standard browser for the state and that the new supported browser is Microsoft Edge. E-permitting does continue to support Google Chrome browsers which may provide better response times.

### Air Quality

ID	Title	Description
61709	Reauthorization of a Reauthorization	The ability to reauthorize a permit which has previously been reauthorized.
61033	When there is a new submission, send a notification email to program managers and cc chiefs	When there is a new submission, send a notification email to program managers and cc chiefs

### BWEW

ID	Title	Description
12786	Make Aquatic Resource Information attachment required	The Aquatic Resource information (resource impact length, area, etc.) was not required when completing the GP. I was able to choose the impact type (floodway impact) and did not need to provide any additional information or dimensions. The document is available and optional per the spreadsheet...this is an enhancement request to make it required at the Overview level.
61715	Update to Certification Module	certification Module Changes
62231	final DEP decision letters, and PASPGP are not showing up on the public view page	final DEP decision letters, and PASPGP are not showing up on the public view page

### Clean Water

ID	Title	Description
63523	Clean Water Routing Update for Beaver County	We need to update the Chapter 102 ePermit routing logic to account for Beaver County's new delegation agreement. Starting May 26, 2021, applications should be routed to Beaver County
62060	Clean Water- Individual- Permit needs to be editable	Formatting is off in the final document. Any additional conditions added have a different indent.

<b>63094</b>	Preparer role should have ability to withdraw application when in Correction Required status	for Clean Water, External users with the Preparer role should have the ability to Withdraw the application when it is in Correction Status. Currently, they are only able to edit the application
<b>57087</b>	NPDES General email notifications to also go to Lead Reviewer	For all notifications sent, include Lead reviewer. This should be consistent throughout all application types that the lead reviewer receives all the notifications sent to the applicant

## Mining

ID	Title	Description
<b>59444</b>	Request to have Technical Chief role included on lead reviewer selection	Right now the Lead Reviewer drop down is populated with users in the Reviewer role. Request to have the list include Technical Chief role for the DMO as well.
<b>58910</b>	Annual Production Report- contract operator field	change this Contract Operator Field to be populated from the PF/Client Relationship client ID from eFACTS. Otherwise it will be the same name for the permittee and the contract operator. In this particular example the contract operator drop down would be blank since there is no contract operator. For others there will be multiple clients as contract operators.

## Oil & Gas

ID	Title	Description
<b>16030</b>	Dashboard - Request to add Farm Name and Well Number as columns on External Dashboard	External Dashboard needs to show distinguishing details (farm name/well number) so operators are able to tell the difference between multiple applications located on the same pad
<b>63072</b>	User can create duplicate formations causing efacts load fail	User can create duplicate formations causing efacts load fail
<b>61398</b>	Correction is made on the external side, changes are not pushed to eFACTS until manual 'load to efacts' is pushed	When a correction is made on the external side, changes are not pushed to eFACTS until "load to eFACTS" is pushed within a task. This is problematic for multiple reasons. 1)Tech review staff do not even have a load to eFACTS option to push in their task area. 2)Requested information such as when an operator made typo mistakes to the TVD/TMD did not get pushed to eFACTS when corrections were made, therefore still not giving the application a permit #. This info should be pushed upon submittal just like it is when the operator first submits the original application.

## Storage Tanks

ID	Title	Description
<b>62711</b>	Performance Issue – Bulk Payments	At a high-level, we are facing this issue intermittently due to webservice time-out causing an error for the users.
<b>63784</b>	Facility amendment may not include site info and should still load to efacts properly	Facility amendments where site info was not updated were not loading to EFACTS.
<b>60079</b>	Update applicant email for verifying payment	verbiage the applicant receives for the Verifying Payment email is very confusing and should be updated to provide more clarity
