

**KOONTZ RD**

**WORKSHEET 1. GENERAL SITE INFORMATION**

**Date:** October 21, 2016

**Project Name:** Koontz Rd

**Municipality:** Loyalhanna Township

**County:** Westmoreland

**Total Area (acres):** 2.10

**Major River Basin:** Ohio

**Watershed:** Loyalhanna Creek

**Sub Basin:** Loyalhanna Creek

**Nearest Surface Water to Receive Runoff:** Lower Loyalhanna Creek (Serviceberry Run)

**Ch. 93 - Designated Water Use:** HQ-WWF

**Impaired according to Chapter 303(d) list?** YES   
**List Causes of Impairment:** NO

*Is Project Subject to, or Part of:*

**Municipal Separate Storm Sewer System (MS4) Requirements** YES   
NO

**Existing or Planned drinking water supply?** YES   
NO

**If yes, distance from proposed discharge (miles):** \_\_\_\_\_

**Approved Act 167 Plan?** YES   
NO

**Existing River Conservation Plan?** YES   
NO

## WORKSHEET 2. SENSITIVE NATURAL RESOURCES

### INSTRUCTIONS:

1. Provide Sensitive Resources Map according to non-structural BMP 5.4.1 in Chapter 5. This map should identify wetlands, woodlands, natural drainage ways, steep slopes, and other sensitive natural areas.

2. Summarize the existing extent of each sensitive resource in the Existing Sensitive Resources Table (below, using Acres). If none present, insert 0.

3. Summarize Total Protected Area as defined under BMPs in Chapter 5.

4. Do not count any area twice. For example, an area that is both a floodplain and a wetland may only be considered once.

| <b>EXISTING NATURAL SENSITIVE RESOURCE</b> | <b>MAPPED?<br/>yes/no/n/a</b> | <b>TOTAL AREA<br/>(Ac.)</b> | <b>PROTECTED<br/>AREA (Ac.)</b> |
|--|-------------------------------|-----------------------------|---------------------------------|

## WORKSHEET 10. WATER QUALITY COMPLIANCE FOR NITRATE

Does the site design incorporate the following BMPs to address nitrate pollution? A summary “yes” rating is achieved if at least 2 Primary BMPs for nitrate are provided across the site or 4 secondary BMPs for nitrate are provided across the site (or the equivalent) “provided across the site” is taken to mean the specifications for that BMP set forward in Sections 5 and 6 are satisfied.

Proposed BMPs from PA Stormwater Best Management Practices Manual Chapter 5 & 6

|   | Yes | No |
|---|-----|----|
| <b>Primary BMPs for Nitrate:</b>                                      |     |    |
| NS BMP 5.4.2 – Protect/Conserve/Enhance Riparian Buffers              |     |    |
| NS BMP 5.5.4 – Cluster Uses at Each Site                              |     |    |
| NS BMP 5.6.1 – Minimize Total Disturbed Area                          | X   |    |
| NS BMP 5.6.3 – Re-Vegetate/Re-Forest Disturbed Areas (Native Species) | X   |    |
| NS BMP 5.9.1 – Street Sweeping/Vacuuming                              |     |    |
| Structural BMP 6.7.1 – Riparian Buffer Restoration                    |     |    |
| Structural BMP 6.7.2 – Landscape Restoration                          |     |    |
|   |     |    |
| <b>Secondary BMPs for Nitrate:</b>                                    |     |    |
| NS BMP 5.4.1 – Protect Sensitive/Special Value Features               |     |    |
| NS BMP 5.4.3 – Protect/Utilize Natural Drainage Features              |     |    |
| NS BMP 5.6.2 – Minimize Soil Compaction                               | X   |    |
| Structural BMP 6.4.5 – Rain Garden/Bioretenention                     |     |    |
| Structural BMP 6.4.8 – Vegetated Swale                                |     |    |
| Structural BMP 6.4.9 – Vegetated Filter Strip                         |     |    |
| Structural BMP 6.6.1 – Constructed Wetland                            |     |    |
| Structural BMP 6.7.1 – Riparian Buffer Restoration                    |     |    |
| Structural BMP 6.7.2 – Landscape Restoration                          |     |    |
| Structural BMP 6.7.3 – Soils Amendment/Restoration                    |     |    |

1. Use 1.6 for Temporary Channels; 2.25 for Temporary Channels in Special Protection (HQ or EV) Watersheds; 2.75 for Permanent Channels. For Rational Method, enter "N/A" and attach E&S Worksheets 9 and 10. For TR-55 enter "N/A" and attach appropriate Worksheets.
2. Adjust "n" value for changes in channel liner and flow depth. For vegetated channels, provide data for manufactured linings without vegetation and with vegetation in separate columns.
3. Slopes may not be averaged.
4. Minimum Freeboard is 0.5 ft or 1/4 Total Channel Depth, whichever is greater.,
5. Permissible velocity lining design methods is not acceptable for channels with a bed slope of 10% or greater. Shear stress lining design method is required for channels with a bed slope of 10% or greater. Shear stress lining design method may be used for any channel bed slope.

**PCSM - DESIGN CALCULATIONS  
KOONTZ RD**

## Post Construction Stormwater Management Plan - Design Calculations Koontz Road

---

### **PURPOSE**

The purpose of these calculations is to design a Post-Construction Stormwater Management (PCSM) Plan for the Koontz Road Block Valve Site as part of the Sunoco Pipeline L.P. Pennsylvania Pipeline Project. The Koontz Road Block Valve Site is located in Loyalhanna Township, Westmoreland County, PA. Permanent stormwater controls will be developed to satisfy PADEP and local stormwater control regulations. *(No applicable Act 167 or local regulations)*

### **PCSM Design Requirements**

The PCSM design for this project follows the PA Department of Environmental Protection's (PaDEP) Pennsylvania Stormwater Best Management Practices Manual (BMP Manual), December 2006; and the standard design criteria from PA Title 25, Chapter 102.8.(g)(2) and (3).

Chapter 3 of the BMP Manual, Stormwater Management Principles and Recommended Control Guidelines, outlines the recommended control guidelines referenced for this design, as follows:

#### **Recommended Volume Control Guideline**

Use of Control Guideline 1 is recommended where site conditions offer the opportunity to reduce the increase in runoff volume as follows:

- do not increase the post-development total runoff volume for all storms equal to or less than the two-year/24-hour event;
- existing (pre-development) non-forested pervious areas must be considered meadow (good condition) or its equivalent; and
- 20 percent of existing impervious area, when present, shall be considered meadow (good condition) or its equivalent.

This site will utilize an infiltration berm to manage the two-year/24-hour volume increase.

#### **Recommended Peak Rate Control Guideline**

The recommended control guideline for peak rate control is:

- Do not increase the peak rate of discharge for the 1-year through 100-year events (at minimum); as necessary, provide additional peak rate control as required by applicable and approved Act 167 plans. *(No applicable Act 167 Plans)*

This site will utilize an infiltration berm to manage the one-year through 100-year peak rate increases. These BMPs, in conjunction with diversion channels and collection channels, will also help to increase the time of concentration.

#### **Infiltration**

Infiltration rates for the PCSM BMPs have been determined from site infiltration testing conducted in accordance of the PA BMP Manual. Documentation for infiltration testing and design infiltration rates can be found in Attachment 5 of the PCSM Package.

#### **Loading Ratio**

In general, the following Loading Ratio guidelines are recommended:

- Maximum Impervious Loading Ratio of 5:1 relating impervious drainage area to infiltration area.

#### **Disturbed Area**

To meet PADEP PCSM Worksheet 10 guidelines, 90% of the disturbed area must be contained by BMP's.

By: RJM Date: 10/21/16 Subject: Sunoco PA Pipeline Project Sheet No.:      of       
 Chkd. By: LMD Date: 1/27/17 Koontz Rd Proj. No.: 112IC05958

1. Runoff (in) =  $Q = (P - 0.2S)^2 / (P + 0.8S)$  where [eq. 2-3, Ref. #2]

P = 2-Year Rainfall (in)

S = (1000/CN)-10

2. Runoff Volume (CF) = Q x Area x 1/12

Q = Runoff (in)

Area = Land use area (sq. ft.)

## IMPERVIOUS LOADING RATE

|   | Area (ac) | Area (sf) |
|---|-----------|-----------|
| Detained Impervious Area (Gravel & Pavement): | 0.24      | 9102.45   |
| Maximum Impervious Ratio:                     | 5         | :1        |
| Minimum Infiltration Area (sf):               |           | 1,820     |
| Design Infiltration Area (sf):                |           | 2,400     |
| Design Impervious Ratio:                      | 3.8       | :1        |

## TOTAL WATERSHED LOADING RATE

|  | Area (ac) | Area (sf) |
|--|-----------|-----------|
| Detained Watershed Area (to Infiltration BMP): | 0.48      | 21064.70  |
| Maximum Total Watershed Ratio Ratio:           | 8         | :1        |
| Minimum Infiltration Area (sf):                |           | 2,633     |
| Design Infiltration Area (sf):                 |           | 2,400     |
| Design Total Watershed Ratio:                  | 8.8       | :1        |

A diversion channel has been added along the northeast side of the pad to minimize the drainage area to the infiltration berm.

## DISTURBED AREA

To meet Worksheet #10 guidelines, 90% of the disturbed area must be detained by BMP's. The infiltration berm for the Koontz Road Block Valve Site will be located along the southern edge of the pad and 100 percent of the disturbed area will be detained by the BMP.

## INFILTRATION RATE

The design infiltration rate is determined from an average of the results within the footprint and approved vicinity of the proposed infiltration berm.

|   |            |
|---|------------|
| <b>Design Infiltration Rate (in/hr) - Infiltration Berm 1</b> | <b>3.5</b> |
|---|------------|

## VOLUME CALCULATION FOR STRUCTURAL BMPs

### Infiltration Berm 1

Storage Volume

| Width (ft) | Length (ft) | Cross Section Area | Surface Area (sf) | Depth to Overflow (ft) | Storage Volume (cf) |
|------------|-------------|--------------------|-------------------|------------------------|---------------------|
| 16         | 150         | 13.6               | 2,400             | 2.00                   | 2040                |

## VOLUME CREDIT FOR STRUCTURAL BMPs

The Volume Credit for each structural BMP will be the minimum of the following three volumes: Runoff to BMP from a 2 year-24 hour storm event, Storage Volume of the BMP, Infiltration Volume of the BMP within 72 hours.

| Infiltration BMP                                  | 2-Year Runoff Volume (cf) | Storage Volume (cf) | Infiltration Volume - 72 Hours (cf) | Structural Volume Credit (cf) |
|---|---------------------------|---------------------|-------------------------------------|-------------------------------|
| Infiltration Berm 1                               | 1617                      | 2040                | 2040                                | 1617                          |
| <b>Total Structural Credit (cf) (Worksheet 5)</b> |                           |                     |                                     | <b>1617</b>                   |

Note: The Infiltration Volume is capped by the Storage Volume of the BMP.

## WATERSHED CHARACTERISTICS

The total watershed area for the project site is 2.10 acres. Based upon the soil survey of Westmoreland County, Pennsylvania (Ref. #3, Attachment B), the primary soil types within the watershed area are of the Cavode silt loam (CaB), Gilpin-Weikert channery silt loam (GwF), and Wharton silt loam (WrC) series which are primarily classified as HSG C/D, C, and C/D, respectively. See the project drawings for watershed mapping.

### Pre-Development Condition

| Hydrologic Group | Soil Name | Cover Description     | Curve Number | Area (acres) |
|------------------|-----------|-----------------------|--------------|--------------|

## PEAK FLOW CALCULATIONS

The infiltration berms were designed using the Time of Concentration Adjustment method.

## HYDRAULIC PATHS

Times of concentration and travel times were evaluated for the pre-development condition as well as post-development conditions (Ref. #2). TR55 methodology was used to determine the  $T_c$  as presented in the AutoCAD Civil 3D Hydraflow Hydrographs computer output (Attachement C).

## TIME OF CONCENTRATION ADJUSTMENT

The 'Peak Flow for Post-Dev. at the BMP (cfs)' is calculated from the BMP watershed with the Point of Interest at the BMP. The 'Volume Control BMP Storage' is the minimum value of the runoff volume to the BMP or the BMP Storage Volume.

### *Infiltration Berm 1*

| Storm Event (Yr.) | Peak Flow Post-Dev. At the BMP (cfs) | Volume Control BMP Storage (cf) | Additional Residence Time (min.) | Post Development Time of Concentration (w/o BMPs) (min.) | Adjusted Time Of Concentration (min.) |
|-------------------|--------------------------------------|---------------------------------|----------------------------------|--|---------------------------------------|
| 2                 | 0.80                                 | 1,651                           | 34.2                             | 5.8  | 40.0                                  |
| 10                | 1.47                                 | 2,040                           | 23.1                             | 5.8  | 28.9                                  |

## STORMWATER POND ROUTING

The computer programs AutoCAD Civil 3D Hydraflow Hydrographs Extension (Reference #7) was used to calculate the peak runoff during the pre-development conditions, post-development conditions without BMPs, and post-development conditions with BMPs. The peak discharge for each condition was calculated for the 2-yr, 10-yr, 50-yr, and 100-yr - 24-hr storm events. The following table summarizes the peak discharges for all conditions and the resulting changes. As demonstrated by the table, all the post-development conditions with BMPs produced discharges that were less than the peak runoffs from the pre-development conditions. Hydraflow documentation is included in Attachment C.

| Storm Frequency | Pre-Development   | Post-Development            |  |                               | Change (cfs) |
|-----------------|-------------------|-----------------------------|--|-------------------------------|--------------|
|                 | Peak Runoff (cfs) | Peak Outflow (No BMP) (cfs) | Watershed Runoff Vol. (with BMPs) (cf) | Peak Outflow (with BMP) (cfs) |              |
| 2-yr            | 1.85              | 2.3                         | 5,424                                  | 1.37                          | -0.47        |
| 10-yr           | 3.99              | 4.7                         | 10,626                                 | 3.13                          | -0.87        |
| 50-yr           | 6.78              | 7.8                         | 17,545                                 | 5.96                          | -0.82        |
| 100-yr          | 8.19              | 9.3                         | 20,799                                 | 7.61                          | -0.58        |

<sup>1</sup> Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS). Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values. Please refer to NOAA Atlas 14 document for more information.

### MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service  
 Web Soil Survey URL: <http://websoilsurvey.nrcs.usda.gov>  
 Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Westmoreland County, Pennsylvania  
 Survey Area Data: Version 9, Nov 16, 2015

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Mar 27, 2011—Oct 9, 2011

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

## Map Unit Legend

## Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments

## Custom Soil Resource Report

on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

## Westmoreland County, Pennsylvania

### CaB—Cavode silt loam, 3 to 8 percent slopes

#### Map Unit Setting

*National map unit symbol:* 18s4

*Elevation:* 1,000 to 1,700 feet

*Mean annual precipitation:* 36 to 46 inches

*Mean annual air temperature:* 41 to 62 degrees F

*Frost-free period:* 130 to 160 days

*Farmland classification:* Farmland of statewide importance

#### Map Unit Composition

*Cavode and similar soils:* 85 percent

*Minor components:* 15 percent

*Estimates are based on observations, descriptions, and transects of the mapunit.*

#### Description of Cavode

##### Setting

*Landform:* Hills

*Landform position (two-dimensional):* Backslope, summit

*Landform position (three-dimensional):* Interfluve

*Down-slope shape:* Linear, concave

*Across-slope shape:* Concave

*Parent material:* Acid clayey residuum weathered from clayey shale

##### Typical profile

*Ap - 0 to 10 inches:* silt loam

*Btg - 10 to 47 inches:* silty clay loam

*BCg - 47 to 57 inches:* channery silt loam

*R - 57 to 61 inches:* bedrock

##### Properties and qualities

*Slope:* 3 to 8 percent

*Depth to restrictive feature:* 40 to 90 inches to lithic bedrock

*Natural drainage class:* Somewhat poorly drained

*Runoff class:* Very high

*Capacity of the most limiting layer to transmit water (Ksat):* Moderately low to moderately high (0.06 to 0.20 in/hr)

*Depth to water table:* About 6 to 18 inches

*Frequency of flooding:* None

*Frequency of ponding:* None

*Available water storage in profile:* Moderate (about 7.4 inches)

##### Interpretive groups

*Land capability classification (irrigated):* None specified

*Land capability classification (nonirrigated):* 3w

*Hydrologic Soil Group:* C/D

*Hydric soil rating:* No

#### Minor Components

##### Gilpin

*Percent of map unit:* 10 percent

*Landform:* Hills

## Custom Soil Resource Report

*Landform position (two-dimensional):* Summit, shoulder  
*Landform position (three-dimensional):* Interfluve  
*Down-slope shape:* Convex  
*Across-slope shape:* Convex, linear  
*Hydric soil rating:* No

### **Brinkerton**

*Percent of map unit:* 5 percent  
*Landform:* Draws, hills  
*Landform position (two-dimensional):* Toeslope, footslope  
*Landform position (three-dimensional):* Head slope, base slope  
*Down-slope shape:* Linear, concave  
*Across-slope shape:* Linear, concave  
*Hydric soil rating:* Yes

## **GwF—Gilpin-Weikert channery silt loams, 25 to 60 percent slopes**

### **Map Unit Setting**

*National map unit symbol:* l8q3  
*Elevation:* 800 to 1,700 feet  
*Mean annual precipitation:* 36 to 46 inches  
*Mean annual air temperature:* 41 to 62 degrees F  
*Frost-free period:* 130 to 160 days  
*Farmland classification:* Not prime farmland

### **Map Unit Composition**

*Gilpin and similar soils:* 60 percent  
*Weikert and similar soils:* 25 percent  
*Minor components:* 15 percent  
*Estimates are based on observations, descriptions, and transects of the mapunit.*

### **Description of Gilpin**

#### **Setting**

*Landform:* Hillslopes  
*Landform position (two-dimensional):* Backslope  
*Landform position (three-dimensional):* Side slope  
*Down-slope shape:* Linear  
*Across-slope shape:* Linear  
*Parent material:* Acid fine-loamy residuum weathered from shale and siltstone

#### **Typical profile**

*O<sub>i</sub> - 0 to 1 inches:* slightly decomposed plant material  
*O<sub>e</sub> - 1 to 2 inches:* moderately decomposed plant material  
*A - 2 to 8 inches:* channery silt loam  
*B<sub>t</sub> - 8 to 24 inches:* channery silt loam  
*C - 24 to 30 inches:* very channery loam  
*R - 30 to 35 inches:* bedrock

#### **Properties and qualities**

*Slope:* 25 to 60 percent

## Custom Soil Resource Report

*Depth to restrictive feature:* 20 to 40 inches to lithic bedrock  
*Natural drainage class:* Well drained  
*Runoff class:* High  
*Capacity of the most limiting layer to transmit water (Ksat):* Moderately high to high  
(0.20 to 2.00 in/hr)  
*Depth to water table:* More than 80 inches  
*Frequency of flooding:* None  
*Frequency of ponding:* None  
*Available water storage in profile:* Low (about 3.8 inches)

### Interpretive groups

*Land capability classification (irrigated):* None specified  
*Land capability classification (nonirrigated):* 7e  
*Hydrologic Soil Group:* C  
*Hydric soil rating:* No

### Description of Weikert

#### Setting

*Landform:* Hillslopes  
*Landform position (two-dimensional):* Backslope  
*Landform position (three-dimensional):* Nose slope  
*Down-slope shape:* Convex  
*Across-slope shape:* Convex  
*Parent material:* Acid loamy residuum weathered from shale and siltstone

#### Typical profile

*O<sub>i</sub> - 0 to 1 inches:* slightly decomposed plant material  
*A - 1 to 5 inches:* channery silt loam  
*B<sub>w</sub> - 5 to 15 inches:* very channery silt loam  
*C - 15 to 18 inches:* extremely channery silt loam  
*R - 18 to 28 inches:* bedrock

#### Properties and qualities

*Slope:* 25 to 65 percent  
*Depth to restrictive feature:* 10 to 20 inches to lithic bedrock  
*Natural drainage class:* Well drained  
*Runoff class:* Medium  
*Capacity of the most limiting layer to transmit water (Ksat):* Moderately high to high  
(0.60 to 6.00 in/hr)  
*Depth to water table:* More than 80 inches  
*Frequency of flooding:* None  
*Frequency of ponding:* None  
*Available water storage in profile:* Very low (about 1.3 inches)

#### Interpretive groups

*Land capability classification (irrigated):* None specified  
*Land capability classification (nonirrigated):* 7s  
*Hydrologic Soil Group:* D  
*Hydric soil rating:* No

### Minor Components

#### Shelocta

*Percent of map unit:* 10 percent  
*Landform:* Hillslopes  
*Landform position (two-dimensional):* Backslope

## Custom Soil Resource Report

*Landform position (three-dimensional):* Side slope  
*Down-slope shape:* Concave  
*Across-slope shape:* Linear, convex  
*Hydric soil rating:* No

### **Wharton**

*Percent of map unit:* 5 percent  
*Landform:* Hillslopes  
*Landform position (two-dimensional):* Backslope  
*Landform position (three-dimensional):* Side slope  
*Down-slope shape:* Linear  
*Across-slope shape:* Linear  
*Hydric soil rating:* No

## **WrC—Wharton silt loam, 8 to 15 percent slopes**

### **Map Unit Setting**

*National map unit symbol:* 2t5mm  
*Elevation:* 620 to 2,160 feet  
*Mean annual precipitation:* 37 to 51 inches  
*Mean annual air temperature:* 47 to 53 degrees F  
*Frost-free period:* 161 to 205 days  
*Farmland classification:* Farmland of statewide importance

### **Map Unit Composition**

*Wharton and similar soils:* 80 percent  
*Minor components:* 20 percent  
*Estimates are based on observations, descriptions, and transects of the mapunit.*

### **Description of Wharton**

#### **Setting**

*Landform:* Hills  
*Landform position (two-dimensional):* Backslope, shoulder  
*Landform position (three-dimensional):* Side slope  
*Down-slope shape:* Convex  
*Across-slope shape:* Linear  
*Parent material:* Fine-loamy residuum weathered from shale and siltstone

#### **Typical profile**

*Ap - 0 to 9 inches:* silt loam  
*Bt1 - 9 to 16 inches:* silt loam  
*Bt2 - 16 to 22 inches:* silt loam  
*Bt3 - 22 to 31 inches:* silt loam  
*BC - 31 to 46 inches:* silty clay loam  
*C - 46 to 69 inches:* channery silty clay loam  
*Cr - 69 to 79 inches:* bedrock

#### **Properties and qualities**

*Slope:* 8 to 15 percent

## Custom Soil Resource Report

*Depth to restrictive feature:* 40 to 71 inches to paralithic bedrock  
*Natural drainage class:* Moderately well drained  
*Capacity of the most limiting layer to transmit water (Ksat):* Very low (0.00 to 0.00 in/hr)  
*Depth to water table:* About 16 to 28 inches  
*Frequency of flooding:* None  
*Frequency of ponding:* None  
*Available water storage in profile:* High (about 9.5 inches)

### Interpretive groups

*Land capability classification (irrigated):* None specified  
*Land capability classification (nonirrigated):* 3e  
*Hydrologic Soil Group:* C/D  
*Hydric soil rating:* No

### Minor Components

#### Gilpin

*Percent of map unit:* 10 percent  
*Landform:* Hillslopes  
*Landform position (two-dimensional):* Backslope, shoulder  
*Landform position (three-dimensional):* Side slope  
*Down-slope shape:* Convex  
*Across-slope shape:* Convex, linear  
*Hydric soil rating:* No

#### Rarden

*Percent of map unit:* 5 percent  
*Landform:* Hills  
*Landform position (two-dimensional):* Summit  
*Landform position (three-dimensional):* Interfluvium  
*Down-slope shape:* Convex  
*Across-slope shape:* Linear  
*Hydric soil rating:* No

#### Ernest

*Percent of map unit:* 5 percent  
*Landform:* Hillslopes  
*Landform position (two-dimensional):* Footslope  
*Landform position (three-dimensional):* Base slope  
*Down-slope shape:* Concave  
*Across-slope shape:* Concave  
*Hydric soil rating:* No

## DIVERSION DITCH DESIGN

### DESIGN DISCHARGE

| Channel | Design Discharge (cfs) |
|---------|------------------------|
| DD-1*   | 4.75                   |

DD-1 is designated as the watershed labeled as "Koontz Rd - Post - Undetained" from Attachment C. The design discharge is the 100-year 24-hour storm runoff from the watershed.

### CHANNEL LINING

The collection channels will be vegetated and lined with a North American Green Synthetic Lining, or approved equivalent if needed for stability. The North American Green Erosion Control Materials Design Software, Version 5.0 was used to analyze the channel lining stability and hydraulic characteristics of the channel.

### FREEBOARD

| Channel | Velocity (ft/s) | Depth (ft) | Minimum Required Freeboard (ft) | Minimum Required Depth (ft) |
|---------|-----------------|------------|---------------------------------|-----------------------------|
| DD-1    | 2.56            | 0.75       | 0.50                            | 1.25                        |

### CHANNEL CONFIGURATION SUMMARY

| Channel | Bed Slope (%) | Bottom Width (ft) | Side Slopes |          | Channel Lining | Total Depth (ft) |
|---------|---------------|-------------------|-------------|----------|----------------|------------------|
|         |               |                   | (_LH:1V)    | (_RH:1V) |                |                  |
| DD-1    | 6%            | 1                 | 2           | 2        | NAG P300       | 1.50             |

Notes:

1. Channel velocities and flow depths were obtained from the included computer output .
2. The channel section characteristics resulting in the largest total depth were used.

### LEVEL SPREADER DESIGN

| CHANNEL DESIGNATION | ENERGY DISSIPATOR TYPE | LENGTH (ft) | Downslope Protection | Q (cfs) |
|---------------------|------------------------|-------------|----------------------|---------|
| DD-1                | Earthen Level Spreader | 109         | Grass/Rock           | 7.1     |

$$Q = C_w \times L \times H^{3/2} \quad (\text{Ref \#5})$$

Q = Flow (cfs)

L = Length of Level Spreader (ft)

C<sub>w</sub> = Weir Coefficient 3.27

H = Driving Head (ft) 0.07 Based on V(allowable) = 1.33

$$V = 1.5 \times C_w \times H^{1/2} \quad (\text{Ref \#5})$$

V = Allowable velocity at the Level Spreader (fps)

Grass/Ticket = 1.33

Gravel = 1.5 (Table G.2, Ref #5)

Mulch (trees, Shrubs) = 0.67
