Subject: Pennsylvania Pipeline Project - Stormwater Consistency Letter

Megan,

We understand that the H&H Report for the Houston Injection Station Site Plan indicates that the grading will not increase the 100-year base flood elevation by more than one (1) foot at any point. Please verify that the Pennsylvania Pipeline Project does not contain any additional areas which proposed contour alterations within a FEMA Special Hazard Flood Area.

In addition, we have enclosed our most recent review letter for the Houston Injection Station Site Plan. We cannot issue a Stormwater Consistency Letter until the outstanding comments/issues are addressed.

Should you have any questions/concerns regarding this information, please do not hesitate to contact us.

Thanks,

Rob Herring, E.I.T.
