**SECTION D. EXPEDITED REVIEW**

**I. Expedited Review Eligibility**

1. Is any part of the project in the watershed of a surface water with an existing or designated use of exceptional value or high quality pursuant to Chapter 93 (relating to water quality standards), in an exceptional value wetland in accordance with 25 Pa. Code § 105.17, or in the watershed of an impaired surface water where the cause of the impairment is identified as siltation?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
2. Will the project in which the well pad will be constructed be in or on a floodplain?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
3. Is any earth disturbance located or proposed to be located on land known to be contaminated by the release of regulated substances as defined in Section 103 of Act 2, 35 P.S. § 6026.103?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
4. Will naturally occurring geologic formations or soil conditions provide hazards to the project or surrounding environment or have the potential to cause or contribute to pollution when disturbed?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
5. Do any unresolved non-compliance issues exist with the applicant or the facility?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
6. Is the project a transmission project?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No

Site #	Site Name	Site Address	Latitude	Longitude	City	State	Zip Code	County	Municipality	Directions To Site

**If yes to any of the above questions the project is not eligible for Expedited Review; If the project is eligible for Expedited Review, all the following items must be completed.**

**II. Expedited Review Process**

1. Is the technically and administratively complete and accurate NOI package prepared and certified by a licensed professional?	<input type="checkbox"/> Yes <input type="checkbox"/> No
2. Are E&S and PCSM/Site Restoration Plan drawings and narrative prepared and sealed by a licensed professional? <i>(Include interim restoration details when needed)</i>	<input type="checkbox"/> Yes <input type="checkbox"/> No
3. Include a Resource Delineation Report and answer the following questions: (If the answer to question a. is "Yes" then skip to #4. If the answer to a. is "No" the applicant must answer "Yes" to at least one of the questions, b. through d. to be eligible for expedited review.)	
a. Were all wetland resources delineated during the growing season?	<input type="checkbox"/> Yes <input type="checkbox"/> No
b. If not during the growing season, was a follow-up visit conducted during the growing season to verify/adjust boundaries and look for potentially missed resources?	<input type="checkbox"/> Yes <input type="checkbox"/> No
c. Was a quality assurance field review conducted at a later date by an independent qualified wetland professional to verify boundaries and look for potentially missed resources? (If yes, attach Quality Assurance Field Review Report)	<input type="checkbox"/> Yes <input type="checkbox"/> No
d. Was a Jurisdictional Determination (JD) or Preliminary JD conducted by the US Army Corps of Engineers on the whole project? (If yes, attach Preliminary or Jurisdictional Determination Report)	<input type="checkbox"/> Yes <input type="checkbox"/> No
4. If applicable, have you included PNDI clearance letters or other documentation from applicable resource agencies?	<input type="checkbox"/> Yes <input type="checkbox"/> No
5. If the project site contains, is along, or within 100 feet of a river, stream, creek, lake, pond or reservoir, will you establish new or preserve existing riparian forest buffer at least 100 feet in width between the top of streambank or normal pool elevation of a lake, pond or reservoir and areas of earth disturbances. If no, will a waiver be obtained? <input type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Yes <input type="checkbox"/> No
6. Name of Licensed Professional	
Company	
Address	
Phone	

6. Will the project be conducted as a phased permit project?  Yes  No  
 If Yes, Include Master Site Plan Estimated Timetable for Phased Projects.  Additional sheet(s) attached.

Phase No. or Name	Description	Total Area	Disturbed Area	Start Date	End Date
1	Adelphia Gateway	18.36 AC	18.36 AC	09/15/20	06/01/21
2A	Tilghman & Parkway Laterals (Transco to DE/PA State Line)	0.15 AC	0.15 AC	09/15/20	06/01/21
2B	Tilghman Lateral	24.76 AC	24.76 AC	01/01/21	06/01/21

7. List existing and previous land use for a minimum of the previous 5 years.  
 The existing use for the Quakertown Compressor Station is a partially developed meter site with gravel and brush.  
 Skippack Pike Meter Station, Cromby Blowdown, Mainline Valve 2 and Chester Creek Blowdown are existing valve sites with gravel and grass.  
 The existing use for the Quakertown Compressor Station is a partially developed site with an adjacent meter site. The area to be distributed is primarily meadow.  
 Marcus Hook Compressor Station is a fully developed compressor site that is primarily gravel in existing conditions.

8. Other Pollutants: Will the stormwater discharge contain polluttional substances other than sediment?  Yes  No  
 If yes, explain and provide any available quantitative data.

9. Will fuels, chemicals, solvents, other hazardous waste or materials be used or stored on site during earth disturbance activities or will Horizontal Directional Drilling (HDD) activities be conducted?  
 Yes  No  **(If yes, Preparedness, Prevention and Contingency (PPC) Plan must be maintained on site during earth disturbance. See NOI Instructions, E.9 PPC Plan Guidance for further information.)**

10. Is the project in the watershed of an impaired surface water where the cause of the impairment is identified as siltation?  
 Yes  No  **(If yes, show how the project will not result in a net change in volume, rate or water quality. See section I below, and E.10 of NOI instructions.)**

11. Are there potentially hazardous naturally occurring geological or soil conditions in any portion of the project or surrounding area? Yes  No   
 If yes, do the potentially hazardous geologic or soil conditions have the potential to cause or contribute to pollution as a result of the proposed earth disturbance activities?  
 If no, provide an explanation. **Refer to PCSM Narrative, Section VII**  
 If yes, Geologic Hazard Mitigation Plan must be attached and explain where in this application details are provided.

12. Has the Act 14 Municipal Notification and proof of receipt of notification been attached to the NOI?  
 Yes  No  **(If not, the NOI is not complete, see E.12 and #4 Municipal Notification in the NOI Instructions for additional guidance.)**

13. Has the PNDI receipt been attached to the NOI?  
 Yes  No  **(If not, the NOI is not complete, see E.13 and #5 PNHP in the NOI Instructions for additional guidance.)**

14. Have the E&S Plan and PCSM/SR Plan been planned and designed to be consistent?  
 Yes  No

15. Have existing and/or proposed Riparian Forest Buffers been identified?  
 Yes  N/A  **(If yes, they must be shown on the E&S Plan as well as the PCSM/SR Plans.)**

16. Have antidegradation implementation requirements for special protection waters been addressed?  
 Yes  No  N/A  **(If yes, antidegradation requirements must be included in the plan.)**

17. Has the seasonal high groundwater level been identified and 20-inch separation established at all excavation locations for pits for conventional operations and Well Development Impoundments for unconventional operations?  
 Yes  No  N/A

18. Receiving Waters	Chapter 93, Designated Use Stream Classification	Chapter 93, Existing Use Stream Classification
<u>Tohickon Creek</u>	<input type="checkbox"/> HQ <input type="checkbox"/> EV <input checked="" type="checkbox"/> Other <u>TSF</u> <input checked="" type="checkbox"/> Siltation-impaired	<input type="checkbox"/> HQ <input type="checkbox"/> EV <input checked="" type="checkbox"/> Other <u>TSF</u> <input checked="" type="checkbox"/> Siltation-impaired

Non-Surface Receiving Water: (include off-site discharges)

**SECTION F. EROSION AND SEDIMENT CONTROL (E&S) PLAN**  
**See the attached Instructions for additional guidance with E&S Plans**

Erosion and Sediment Control Plan BMPs should be designed to minimize accelerated erosion and sedimentation through limiting the extent and duration of earth disturbance, protection of existing drainage and vegetation, limiting soil compaction and controlling the generation of increased runoff. The Department recommends the use of the *Pennsylvania Erosion & Sedimentation Pollution Control Program Manual (E&S Manual)* (363-2134-008) to achieve this goal. The E&S Plan must meet the requirements of Pa. Code § 102.4(b) and submitted with the NOI. Also, see section 2. of the NOI instruction for detailed information on completing the E&S plan and additional requirements.

**a. E&S Plan Summary**

Provide a summary of proposed E&S BMPs and their performance to manage E&S for the project.

The following measures are aimed at controlling accelerated erosion and sedimentation during construction. Temporary erosion and sediment control will be accomplished by utilizing Best Management Practices, such as Rock Construction Entrance, Compost Filter Sock, Inlet Protection, Compost Sock Washout Facility, Pumped Water Filter Bags, Erosion Control Blanket, Temporary Wetland Crossings and Rock Filters. The extent and duration of earth disturbance is to be minimized to limit impacts of erosion and sedimentation to neighboring and downstream properties.

For project site in HQ watersheds, the E&S Design includes ABACT measures to ensure limited erosion and sedimentation.

**b. E&S Plan BMP Design**

Check those that apply:

- E&S Plan is designed using BMPs in the *E&S Manual*.
- E&S Plan is designed using an alternative BMP or design standard approved by DEP.

*Note: NOI packages submitted with alternate BMPs not approved by the Department will be returned to the Applicant.*

c. Do you have any information regarding riparian buffer which differs from Section G, Riparian Buffer?

Yes  No

Explain:

**d. Thermal Impacts Analysis**

Explain how thermal impacts associated with this project were avoided, minimized, or mitigated.

Thermal impacts associated with the project will be minimized and/or mitigated through the incorporation of various BMPs, which include a subsurface and subsurface MRC basins and a subsurface infiltration bed. Runoff from the impervious areas will be directed to the BMPs where the travel time is increased to infiltrate and/or store runoff, reducing the quantity and temperature of the runoff.

The surface basin at Marcus Hook Compressor Station will be vegetated. Landscaping and vegetative cover will mimic natural ecosystems, resulting in a system that is resistant to climatic stresses. Additionally, the basin's outlet structure is designed to promote the slow release of outflow to the surface waters.

The subsurface basin at Transco Meter Station will temporarily store stormwater runoff beneath the surface, away from direct sunlight and will promote infiltration which will release water into the groundwater instead of discharging to the surface waters.

The subsurface basin at Quakertown Compressor Station will temporarily store stormwater runoff beneath the surface, away from direct sunlight and will promote the slow release of outflow to the surface waters.

At the main line valve sites, thermal impacts will be avoided by site restoration activities. The disturbed areas will be restored and seeded as soon as practicable and /or directing runoff to vegetated areas to reduce the temperature of runoff prior to discharge into the streams.

**e. Off-Site Discharge Analysis**

Does the activity propose any off-site discharges to areas other than surface waters?  Yes  No

If yes, it is the applicant's responsibility to ensure that they have legal authority for any off-site discharge to neighboring properties.

The applicant must provide a demonstration in both E&S and PCSM/SR plans that the discharge will not cause erosion, damage, or a nuisance to off-site properties.

**SECTION G. RIPARIAN BUFFER**

1. Will you be protecting, converting or establishing a voluntary riparian forest buffer as part of this project?  Yes  No  
If yes, as part of the PCSM/SR Plan, provide a Buffer Management Plan.

2. Will proposed earth disturbance activities be conducted in an EV or HQ watershed AND within 150 feet of a perennial or intermittent river, stream, or creek, or lake, pond, or reservoir?  Yes  No

If no, proceed to the next section/module.

3. Does this project qualify for an exception (see § 102.14(d)(1))?  Yes  No

If yes, indicate below the type of project for which the exception applies by marking the appropriate box.

Oil and gas activities for which site reclamation or restoration is part of the permit authorization in Chapter 78 and 78a.

Road maintenance activities.

The repair or maintenance of existing pipelines and utilities.

Other (see §102.14(d)(1))

If exceptions are checked, explain how existing riparian buffer will be undisturbed to the extent practicable. Provide a demonstration that the requirements of §102.14(b) are met, or provide the necessary information to request a riparian buffer waiver.

4. Are you requesting a riparian buffer waiver for this project (see § 102.14(d)(2))?  Yes  No

If yes, indicate below the type of project for which you are requesting a waiver by marking the appropriate box.

Linear project that may include pipelines, public roadways, rail lines, or utility lines.

Project is of a temporary nature where the site will be fully restored to its preexisting conditions during the ESCGP permit term.

Project where compliance with mandatory riparian buffers is not appropriate or feasible due to site characteristics or existing structures at the project site.

Other (see §102.14(d)(2)):

If waivers are checked, explain how existing riparian buffers will be undisturbed to the extent practicable.

Note: If "Yes" to #2 **AND** "No" to #3 and #4, provide an attachment to demonstrate how the requirements of §102.14 are met.

**Refer to PCSM Report, Section XII**

**SECTION H. POST CONSTRUCTION STORMWATER MANAGEMENT (PCSM) AND/OR SITE RESTORATION(SR) PLAN**

**See NOI Instructions for additional guidance with PCSM Plans**

PCSM/SR BMPs should be designed to use natural measures to eliminate pollution, infiltrate runoff, not require extensive construction/maintenance, promote pollutant reduction, and preserve the integrity of stream channels. All PCSM/SR BMPs proposed in the PCSM/SR Plan must be designed in accordance with Ch. 102, Ch. 78a for unconventional operations, Ch. 78 for conventional operations and the *Pennsylvania Stormwater Best Management Practices Manual (Stormwater BMP Manual)* (363-0300-002). If alternate design criteria are utilized for the proposed project, they must have prior approval by the Department, or the NOI Application will be returned to the Applicant.

After construction is completed, how much of the entire disturbed area will be restored to meadow in good condition or better, or existing conditions?  All  Partial  None

Include PCSM narrative and drawings for remaining impervious area. Also include a map showing the proposed contours of the site restoration plan.

If there are additional stages of the project prior to permit termination or expiration, list the stages and provide the documents required by subsection 'a' to section 'g' for each stage (e.g. partial restoration or changes to the amount of compacted areas, gravel, and/or impervious areas). Upload a narrative for each additional stage in addition to the drawings.

**EXAMPLE**

Stage No	Stage Name	PCSM Plan	SR Plan
Stage 1	Phase 1: Adelphia Gateway	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Stage 2	Phase 2A: Tilghman & Parkway Laterals (PA/DE State line to Transco)	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Stage 3	Phase 2B: Tilghman Lateral	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Stage 4		<input type="checkbox"/>	<input type="checkbox"/>

**Act 167 Consistency.** Check those that apply.

**Site:**

Is there an Act 167 Plan?  Yes  No

**Chester Creek Blowdown**

The attached PCSM/SR Plan is consistent with an applicable approved Act 167 Plan.

Complete the following for all approved Act 167 Stormwater Management Plans. (Use additional sheets if necessary)

Act 167 Plan Name	Date Adopted	Consistency Letter Included	<input type="checkbox"/>
<u>Chester Creek Watershed</u>	<u>June 2002</u>	Verification Report Included	<input checked="" type="checkbox"/>

*Note: A consistency letter is not required if a verification report is provided. See NOI Instructions. The PCSM/SR Plan must satisfy either sub paragraph 1, 2, or 3 below. Check those that apply.*

- Act 167 Plan approvals on or after January 2005 – The attached PCSM/SR Plan, in its entirety, is consistent with all requirements pertaining to rate, volume, and water quality from an Act 167 Stormwater Management Plan approved by DEP on or after January 2005. Box 1 must be checked if a current, DEP approved Act 167 plan exists.
- The PCSM/SR Plan meets the standard design criteria from sections 102.8(g)(2) and (3) and the *Stormwater BMP Manual*. For projects involving oil and gas activities authorized by a permit issued under Chapter 78 or Chapter 78a (well pads) or pipelines and other similar utility infrastructure, post construction stormwater management requirements are met for all areas that are restored to preconstruction conditions or to a condition of meadow in good condition or better. [Note: PCSM plans must meet both the volume and rate requirements in the regulations, which are provided in the 2 sections mentioned in this paragraph].
- Alternative Design Standard – The attached PCSM/SR Plan was developed using approaches as provided in 102.8(g)(2)(iv) and 102.8(g)(3)(iii). Demonstrate/explain in the space provided below how this standard will be either more protective than what is required in 102.8(g)(2) and 102.8(g)(3) or will maintain and protect existing water quality and existing and designated uses.

**PCSM/SR BMP Alternative Standards:**

Has the alternative BMP or design standard been approved by the Department?

Yes

No – Do not submit the ESCGP-3 application and see Section (H) of the NOI Instructions concerning the alternative BMP approval process.

**Water Quality Compliance:**

Does the PCSM/SR plan comply with requirements for volume control?  Yes  No

If yes, is at least 90% of the disturbed area controlled by a PCSM BMP?  Yes  No

If yes, do you have the Standard PCSM Worksheet # 10 attached to show water quality compliance has achieved?

Yes  No → **SITE RESTORATION ONLY - MEET SECTION 102.8(g)(2) and (3),  
WORKSHEET #10, #12 & #13 ARE NOT APPLICABLE**

If no, attach Standard PCSM Worksheets # 12 and #13 to show water quality compliance has achieved.

If PCSM/SR plan is not complying with the requirements for volume control, attach Standard PCSM Worksheets # 11, # 12 and #13 to show water quality compliance has achieved.

**a. PCSM/SR Plan Summary**

Provide a summary of proposed BMPs and their performance to manage PCSM/SR for the project.

All sites will be restored to pre-existing conditions. By limiting the disturbed areas, limiting extent and duration of disturbance and performing site restoration, these practices will eliminate the net change in rate, volume and water quality after construction.

Check all that apply  PCSM BMPs  SR BMPs

**b.** Do you have any information regarding riparian buffer which differs from what was submitted in the Section G, Riparian Buffer?

Yes  No

Explain:

**c. Thermal Impacts Analysis**

Explain how thermal impacts associated with this project were avoided, minimized, or mitigated.

Thermal impacts have been minimized by limiting the disturbed area to the maximum extent practicable. By minimizing the extent of the disturbed area, vegetative clearing has been minimized. Thermal impacts will also be minimizing the duration of disturbance and reseeding and restoring vegetative growth as soon as possible.

**d. Off-Site Discharge Analysis.**

Does the activity propose any off-site discharges to areas other than surface waters?  Yes  No

If yes, it is the applicant's responsibility to ensure that they have legal authority for any off-site discharge to neighboring properties.

The Applicant must provide a demonstration in both the E&S and PCSM/SR Plans that the discharge will not cause erosion, damage, or a nuisance to off-site properties.

**See PCSM Narrative, Section XI, Page 15**

**e. Summary Table for Supporting Calculation and Measurement Data**  
 (See NOI Instructions for additional guidance with this section)  
 The remainder of this section (Summary Table for Calculation and Measurement Data) does not need to be completed for areas of projects involving oil and gas activities authorized by Chapter 78 or Chapter 78a (well pads) or pipelines and other similar utility infrastructure which will be restored to meadow in good condition or better or existing conditions.

<b>Watershed Name: Chester Creek</b>			
Volume Control design storm frequency <u>N/A</u> Rainfall amount <u>N/A</u> inches	Pre-construction	Post Construction	Net Change
Impervious area (acres)	N/A	N/A	N/A
Volume of stormwater runoff (acre-feet) without planned stormwater BMPs	N/A	N/A	N/A
Volume of stormwater runoff (acre-feet) with planned stormwater BMPs		N/A	N/A
Stormwater discharge rate for the design frequency storm	Pre-construction	Post Construction	Net Change
1) 2-Year/24-Hour	N/A	N/A	N/A
2) 10-Year/24-Hour	N/A	N/A	N/A
3) 50-year/24-Hour	N/A	N/A	N/A
4) 100-year/24-Hour	N/A	N/A	N/A

**f. Summary Description of PCSM/SR BMPs SITE RESTORATION ONLY**

In the lists below, check the BMPs identified in the PCSM Plan. The primary function(s) of the BMP listed in the functions column (infiltration/recharge; detention/retention; water quality). Additional functions may be added if applicable to that BMP. List the stormwater volume and area of runoff to be treated by each BMP type when calculations are required. If any BMP in the PCSM/SR Plan is not listed below, describe it in the space provided after "Other". A summary table with infiltration testing information (Attachment E, included in the NOI Instructions) must be submitted for all Bio-infiltration BMPs included in PCSM/SR plan.

For Rate control provide the volume of stormwater treated and acres treated for the 100-year/24-hour storm event.

For volume control and water quality provide the volume of stormwater treated and acres treated for the 2-year/24-hour storm event.

Key for BMP purpose(s): VC = Volume Control; RC = Rate Control; and WQ = Water Quality

BMP	Function(s)	Purpose(s)	Volume of stormwater treated	Acres treated
<b>Site Restoration ONLY</b> <input checked="" type="checkbox"/> Restore Site to Meadow in Good Condition or Better, or Existing Conditions	Infiltration/Recharge Detention/WQ Treatment	<input checked="" type="checkbox"/> VC <input checked="" type="checkbox"/> RC <input checked="" type="checkbox"/> WQ	_____	_____

**g. Critical PCSM Plan stages**

Identify and list critical stages of implementation of the PCSM Plan for which a licensed professional or designee shall be present on site.

License professional to be present during the site restoration activities as noted the in Site Restoration Schedule.

**SECTION H. POST CONSTRUCTION STORMWATER MANAGEMENT (PCSM) AND/OR SITE RESTORATION(SR) PLAN**

**See NOI Instructions for additional guidance with PCSM Plans**

PCSM/SR BMPs should be designed to use natural measures to eliminate pollution, infiltrate runoff, not require extensive construction/maintenance, promote pollutant reduction, and preserve the integrity of stream channels. All PCSM/SR BMPs proposed in the PCSM/SR Plan must be designed in accordance with Ch. 102, Ch. 78a for unconventional operations, Ch. 78 for conventional operations and the *Pennsylvania Stormwater Best Management Practices Manual (Stormwater BMP Manual)* (363-0300-002). If alternate design criteria are utilized for the proposed project, they must have prior approval by the Department, or the NOI Application will be returned to the Applicant.

After construction is completed, how much of the entire disturbed area will be restored to meadow in good condition or better, or existing conditions?  All  Partial  None

Include PCSM narrative and drawings for remaining impervious area. Also include a map showing the proposed contours of the site restoration plan.

If there are additional stages of the project prior to permit termination or expiration, list the stages and provide the documents required by subsection 'a' to section 'g' for each stage (e.g. partial restoration or changes to the amount of compacted areas, gravel, and/or impervious areas). Upload a narrative for each additional stage in addition to the drawings.

**EXAMPLE**

Stage No	Stage Name	PCSM Plan	SR Plan
Stage 1	Phase 1: Adelphia Gateway	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Stage 2	Phase 2A: Tilghman & Parkway Laterals (PA/DE State line to Transco)	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Stage 3	Phase 2B: Tilghman Lateral	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Stage 4		<input type="checkbox"/>	<input type="checkbox"/>

**Act 167 Consistency.** Check those that apply.

Is there an Act 167 Plan?  Yes  No

The attached PCSM/SR Plan is consistent with an applicable approved Act 167 Plan.

**Site:**  
**Schuylkill River Blowdown**  
**Cromby Blowdown**  
**French Creek Blowdown**

Complete the following for all approved Act 167 Stormwater Management Plans. (Use additional sheets if necessary)

Act 167 Plan Name	Date Adopted	Consistency Letter Included	<input type="checkbox"/>
<u>Chester County-wide</u>	<u>March 27, 2013</u>	Verification Report Included	<input checked="" type="checkbox"/>

*Note: A consistency letter is not required if a verification report is provided. See NOI Instructions. The PCSM/SR Plan must satisfy either sub paragraph 1, 2, or 3 below. Check those that apply.*

- Act 167 Plan approvals on or after January 2005 – The attached PCSM/SR Plan, in its entirety, is consistent with all requirements pertaining to rate, volume, and water quality from an Act 167 Stormwater Management Plan approved by DEP on or after January 2005. Box 1 must be checked if a current, DEP approved Act 167 plan exists.
- The PCSM/SR Plan meets the standard design criteria from sections 102.8(g)(2) and (3) and the *Stormwater BMP Manual*. For projects involving oil and gas activities authorized by a permit issued under Chapter 78 or Chapter 78a (well pads) or pipelines and other similar utility infrastructure, post construction stormwater management requirements are met for all areas that are restored to preconstruction conditions or to a condition of meadow in good condition or better. [Note: PCSM plans must meet both the volume and rate requirements in the regulations, which are provided in the 2 sections mentioned in this paragraph].
- Alternative Design Standard – The attached PCSM/SR Plan was developed using approaches as provided in 102.8(g)(2)(iv) and 102.8(g)(3)(iii). Demonstrate/explain in the space provided below how this standard will be either more protective than what is required in 102.8(g)(2) and 102.8(g)(3) or will maintain and protect existing water quality and existing and designated uses.

**PCSM/SR BMP Alternative Standards:**

Has the alternative BMP or design standard been approved by the Department?

Yes

No – Do not submit the ESCGP-3 application and see Section (H) of the NOI Instructions concerning the alternative BMP approval process.

**Water Quality Compliance:**

Does the PCSM/SR plan comply with requirements for volume control?  Yes  No

If yes, is at least 90% of the disturbed area controlled by a PCSM BMP?  Yes  No

If yes, do you have the Standard PCSM Worksheet # 10 attached to show water quality compliance has achieved?

Yes  No → **SITE RESTORATION ONLY - MEET SECTION 102.8(g)(2) and (3). Per 102.8(n), WORKSHEET #10, #12 & #13 ARE NOT APPLICABLE**

If no, attach Standard PCSM Worksheets # 12 and #13 to show water quality compliance has achieved.

If PCSM/SR plan is not complying with the requirements for volume control, attach Standard PCSM Worksheets # 11, # 12 and #13 to show water quality compliance has achieved.

**a. PCSM/SR Plan Summary**

Provide a summary of proposed BMPs and their performance to manage PCSM/SR for the project.

All sites will be restored to pre-existing conditions. By limiting the disturbed areas, limiting extent and duration of disturbance and performing site restoration, these practices will eliminate the net change in rate, volume and water quality after construction.

Check all that apply  PCSM BMPs  SR BMPs

**b.** Do you have any information regarding riparian buffer which differs from what was submitted in the Section G, Riparian Buffer?

Yes  No

Explain:

**c. Thermal Impacts Analysis**

Explain how thermal impacts associated with this project were avoided, minimized, or mitigated.

Thermal impacts have been minimized by limiting the disturbed area to the maximum extent practicable. By minimizing the extent of the disturbed area, vegetative clearing has been minimized. Thermal impacts will also be minimizing the duration of disturbance and reseeding and restoring vegetative growth as soon as possible.

**d. Off-Site Discharge Analysis.**

Does the activity propose any off-site discharges to areas other than surface waters?  Yes  No

If yes, it is the applicant's responsibility to ensure that they have legal authority for any off-site discharge to neighboring properties.

The Applicant must provide a demonstration in both the E&S and PCSM/SR Plans that the discharge will not cause erosion, damage, or a nuisance to off-site properties.

**See PCSM Narrative, Section XI, Page 15**

**e. Summary Table for Supporting Calculation and Measurement Data**  
 (See NOI Instructions for additional guidance with this section)  
 The remainder of this section (Summary Table for Calculation and Measurement Data) does not need to be completed for areas of projects involving oil and gas activities authorized by Chapter 78 or Chapter 78a (well pads) or pipelines and other similar utility infrastructure which will be restored to meadow in good condition or better or existing conditions.

<b>Watershed Name: Schuylkill River</b>			
Volume Control design storm frequency <u>N/A</u> Rainfall amount <u>N/A</u> inches	Pre-construction	Post Construction	Net Change
Impervious area (acres)	N/A	N/A	N/A
Volume of stormwater runoff (acre-feet) without planned stormwater BMPs	N/A	N/A	N/A
Volume of stormwater runoff (acre-feet) with planned stormwater BMPs		N/A	N/A
Stormwater discharge rate for the design frequency storm	Pre-construction	Post Construction	Net Change
1) 2-Year/24-Hour	N/A	N/A	N/A
2) 10-Year/24-Hour	N/A	N/A	N/A
3) 50-year/24-Hour	N/A	N/A	N/A
4) 100-year/24-Hour	N/A	N/A	N/A

**f. Summary Description of PCSM/SR BMPs SITE RESTORATION ONLY**

In the lists below, check the BMPs identified in the PCSM Plan. The primary function(s) of the BMP listed in the functions column (infiltration/recharge; detention/retention; water quality). Additional functions may be added if applicable to that BMP. List the stormwater volume and area of runoff to be treated by each BMP type when calculations are required. If any BMP in the PCSM/SR Plan is not listed below, describe it in the space provided after "Other". A summary table with infiltration testing information (Attachment E, included in the NOI Instructions) must be submitted for all Bio-infiltration BMPs included in PCSM/SR plan.

For Rate control provide the volume of stormwater treated and acres treated for the 100-year/24-hour storm event.

For volume control and water quality provide the volume of stormwater treated and acres treated for the 2-year/24-hour storm event.

Key for BMP purpose(s): VC = Volume Control; RC = Rate Control; and WQ = Water Quality

**g. Critical PCSM Plan stages**

Identify and list critical stages of implementation of the PCSM Plan for which a licensed professional or designee shall be present on site.

License professional to be present during the site restoration activities as noted the in Site Restoration Schedule.

**SECTION H. POST CONSTRUCTION STORMWATER MANAGEMENT (PCSM) AND/OR SITE RESTORATION(SR) PLAN**

**See NOI Instructions for additional guidance with PCSM Plans**

PCSM/SR BMPs should be designed to use natural measures to eliminate pollution, infiltrate runoff, not require extensive construction/maintenance, promote pollutant reduction, and preserve the integrity of stream channels. All PCSM/SR BMPs proposed in the PCSM/SR Plan must be designed in accordance with Ch. 102, Ch. 78a for unconventional operations, Ch. 78 for conventional operations and the *Pennsylvania Stormwater Best Management Practices Manual (Stormwater BMP Manual)* (363-0300-002). If alternate design criteria are utilized for the proposed project, they must have prior approval by the Department, or the NOI Application will be returned to the Applicant.

After construction is completed, how much of the entire disturbed area will be restored to meadow in good condition or better, or existing conditions?  All  Partial  None

Include PCSM narrative and drawings for remaining impervious area. Also include a map showing the proposed contours of the site restoration plan.

If there are additional stages of the project prior to permit termination or expiration, list the stages and provide the documents required by subsection 'a' to section 'g' for each stage (e.g. partial restoration or changes to the amount of compacted areas, gravel, and/or impervious areas). Upload a narrative for each additional stage in addition to the drawings.

**EXAMPLE**

Stage No	Stage Name	PCSM Plan	SR Plan
Stage 1	Phase 1: Adelphia Gateway	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Stage 2	Phase 2A: Tilghman & Parkway Laterals (PA/DE State line to Transco)	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Stage 3	Phase 2B: Tilghman Lateral	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Stage 4		<input type="checkbox"/>	<input type="checkbox"/>

**Act 167 Consistency.** Check those that apply.

Is there an Act 167 Plan?  Yes  No

The attached PCSM/SR Plan is consistent with an applicable approved Act 167 Plan.

Complete the following for all approved Act 167 Stormwater Management Plans. (Use additional sheets if necessary)

Act 167 Plan Name	Date Adopted	Consistency Letter Included	<input type="checkbox"/>
<u>Naaman's Creek</u>	<u>N/A</u>	Verification Report Included	<input type="checkbox"/>

**Sites:**

**Transco Meter Station**  
**Marcus Hook Compressor Station**

*Note: A consistency letter is not required if a verification report is provided. See NOI Instructions. The PCSM/SR Plan must satisfy either sub paragraph 1, 2, or 3 below. Check those that apply.*

- Act 167 Plan approvals on or after January 2005 – The attached PCSM/SR Plan, in its entirety, is consistent with all requirements pertaining to rate, volume, and water quality from an Act 167 Stormwater Management Plan approved by DEP on or after January 2005. Box 1 must be checked if a current, DEP approved Act 167 plan exists.
- The PCSM/SR Plan meets the standard design criteria from sections 102.8(g)(2) and (3) and the *Stormwater BMP Manual*. For projects involving oil and gas activities authorized by a permit issued under Chapter 78 or Chapter 78a (well pads) or pipelines and other similar utility infrastructure, post construction stormwater management requirements are met for all areas that are restored to preconstruction conditions or to a condition of meadow in good condition or better. [Note: PCSM plans must meet both the volume and rate requirements in the regulations, which are provided in the 2 sections mentioned in this paragraph].
- Alternative Design Standard – The attached PCSM/SR Plan was developed using approaches as provided in 102.8(g)(2)(iv) and 102.8(g)(3)(iii). Demonstrate/explain in the space provided below how this standard will be either more protective than what is required in 102.8(g)(2) and 102.8(g)(3) or will maintain and protect existing water quality and existing and designated uses.

**PCSM/SR BMP Alternative Standards:**

Has the alternative BMP or design standard been approved by the Department?

Yes

No – Do not submit the ESCGP-3 application and see Section (H) of the NOI Instructions concerning the alternative BMP approval process.

**Water Quality Compliance:**

Does the PCSM/SR plan comply with requirements for volume control?  Yes  No

If yes, is at least 90% of the disturbed area controlled by a PCSM BMP?  Yes  No

If yes, do you have the Standard PCSM Worksheet # 10 attached to show water quality compliance has achieved?

Yes  No

If no, attach Standard PCSM Worksheets # 12 and #13 to show water quality compliance has achieved.

If PCSM/SR plan is not complying with the requirements for volume control, attach Standard PCSM Worksheets # 11, # 12 and #13 to show water quality compliance has achieved. **See PCSM Narrative, Section VII & App. D.1**

**a. PCSM/SR Plan Summary**

Provide a summary of proposed BMPs and their performance to manage PCSM/SR for the project.

The following Best Management Practices (BMP), in accordance with Pennsylvania Stormwater BMP Manual, dated December 2006, have been integrated into the design to reduce runoff volume, reduce peak rates and improve water quality. These structural BMPs will result in the prevention or minimization of increased stormwater runoff rate, volume and/or changes in stormwater runoff. Implementing these controls will preserve the integrity of stream channels and maintain and protect the physical, biological and chemical qualities of the receiving stream.

A vegetated MRC BMP will be constructed at Marcus Hook Compressor Station. This structural BMP serves the functions of volume reduction, runoff quality and peak rate reduction. A subsurface infiltration bed (BMP 6.4.3, StormTank) will be constructed at Transco Meter Station. This structural BMP serves the functions of volume reduction, runoff quality and peak rate reduction.

Check all that apply  PCSM BMPs  SR BMPs

**b. Do you have any information regarding riparian buffer which differs from what was submitted in the Section G, Riparian Buffer?**

Yes  No

Explain:

**c. Thermal Impacts Analysis**

Explain how thermal impacts associated with this project were avoided, minimized, or mitigated.

Thermal impacts associated with the project will be minimized and/or mitigated through the incorporation of a vegetated MRC BMP. Runoff from the impervious areas will be directed to the BMPs where the travel time is increased to infiltrate and/or store runoff, reducing the quantity and temperature of the runoff.

The subsurface basin at Transco Meter Station will temporarily store stormwater runoff beneath the surface, away from direct sunlight and will promote infiltration which will release water into the groundwater instead of discharging to the surface waters. The surface basin at Marcus Hook Compressor Station will be vegetated. Landscaping and vegetative cover will mimic natural ecosystems, resulting in a system that is resistant to climatic stresses. Additionally, the basin's outlet structure is designed to promote the slow release of outflow to the surface waters.

**d. Off-Site Discharge Analysis.**

Does the activity propose any off-site discharges to areas other than surface waters?  Yes  No

If yes, it is the applicant's responsibility to ensure that they have legal authority for any off-site discharge to neighboring properties.

The Applicant must provide a demonstration in both the E&S and PCSM/SR Plans that the discharge will not cause erosion, damage, or a nuisance to off-site properties.

**See PCSM Narrative, Section XI, Page 15**

**e. Summary Table for Supporting Calculation and Measurement Data**

*(See NOI Instructions for additional guidance with this section)*

The remainder of this section (Summary Table for Calculation and Measurement Data) does not need to be completed for areas of projects involving oil and gas activities authorized by Chapter 78 or Chapter 78a (well pads) or pipelines and other similar utility infrastructure which will be restored to meadow in good condition or better or existing conditions.

**Watershed Name: Naamans Creek (Site - Marcus Hook Compressor Site)**

Volume Control design storm frequency <u>2-yr</u> Rainfall amount <u>3.4</u> inches	Pre-construction	Post Construction	Net Change
Impervious area (acres)	0.80	1.44	0.64
Volume of stormwater runoff (acre-feet) without planned stormwater BMPs	1.220	1.320	+0.100
Volume of stormwater runoff (acre-feet) with planned stormwater BMPs		0.427	+0.327
Stormwater discharge rate for the design frequency storm	Pre-construction	Post Construction	Net Change
1) 2-Year/24-Hour	24.85	16.66	-8.19
2) 10-Year/24-Hour	39.80	25.84	-13.99
3) 50-year/24-Hour	60.98	43.13	-17.85
4) 100-year/24-Hour	73.05	51.46	-21.59

**f. Summary Description of PCSM/SR BMPs**

In the lists below, check the BMPs identified in the PCSM Plan. The primary function(s) of the BMP listed in the functions column (infiltration/recharge; detention/retention; water quality). Additional functions may be added if applicable to that BMP. List the stormwater volume and area of runoff to be treated by each BMP type when calculations are required. If any BMP in the PCSM/SR Plan is not listed below, describe it in the space provided after "Other". A summary table with infiltration testing information (Attachment E, included in the NOI Instructions) must be submitted for all Bio-infiltration BMPs included in PCSM/SR plan.

For Rate control provide the volume of stormwater treated and acres treated for the 100-year/24-hour storm event.

For volume control and water quality provide the volume of stormwater treated and acres treated for the 2-year/24-hour storm event.

Key for BMP purpose(s): VC = Volume Control; RC = Rate Control; and WQ = Water Quality

**g. Critical PCSM Plan stages**

Identify and list critical stages of implementation of the PCSM Plan for which a licensed professional or designee shall be present on site.

A licensed professional should be present and witness the following stages in construction:

Excavation and final grading of the BMP.

Placement of geotextile and aggregate within the BMP.

Construction of the outlet structure and discharging of piping from the BMP.

**SECTION H. POST CONSTRUCTION STORMWATER MANAGEMENT (PCSM) AND/OR SITE RESTORATION(SR) PLAN**

**See NOI Instructions for additional guidance with PCSM Plans**

PCSM/SR BMPs should be designed to use natural measures to eliminate pollution, infiltrate runoff, not require extensive construction/maintenance, promote pollutant reduction, and preserve the integrity of stream channels. All PCSM/SR BMPs proposed in the PCSM/SR Plan must be designed in accordance with Ch. 102, Ch. 78a for unconventional operations, Ch. 78 for conventional operations and the *Pennsylvania Stormwater Best Management Practices Manual (Stormwater BMP Manual)* (363-0300-002). If alternate design criteria are utilized for the proposed project, they must have prior approval by the Department, or the NOI Application will be returned to the Applicant.

After construction is completed, how much of the entire disturbed area will be restored to meadow in good condition or better, or existing conditions?  All  Partial  None

Include PCSM narrative and drawings for remaining impervious area. Also include a map showing the proposed contours of the site restoration plan.

If there are additional stages of the project prior to permit termination or expiration, list the stages and provide the documents required by subsection 'a' to section 'g' for each stage (e.g. partial restoration or changes to the amount of compacted areas, gravel, and/or impervious areas). Upload a narrative for each additional stage in addition to the drawings.

**EXAMPLE**

Stage No	Stage Name	PCSM Plan	SR Plan
Stage 1	Phase 1: Adelphia Gateway	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Stage 2	Phase 2A: Tilghman & Parkway Laterals (PA/DE State line to Transco)	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Stage 3	Phase 2B: Tilghman Lateral	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Stage 4		<input type="checkbox"/>	<input type="checkbox"/>

**Act 167 Consistency.** Check those that apply.

**Site:**

Is there an Act 167 Plan?  Yes  No

**Skippack Pike Meter Blowdown**

The attached PCSM/SR Plan is consistent with an applicable approved Act 167 Plan.

Complete the following for all approved Act 167 Stormwater Management Plans. (Use additional sheets if necessary)

Act 167 Plan Name	Date Adopted	Consistency Letter Included	<input type="checkbox"/>
<u>East Branch of Perkiomen Creek</u>	<u>May 5, 2004</u>	Verification Report Included	<input checked="" type="checkbox"/>

*Note: A consistency letter is not required if a verification report is provided. See NOI Instructions. The PCSM/SR Plan must satisfy either sub paragraph 1, 2, or 3 below. Check those that apply.*

- Act 167 Plan approvals on or after January 2005 – The attached PCSM/SR Plan, in its entirety, is consistent with all requirements pertaining to rate, volume, and water quality from an Act 167 Stormwater Management Plan approved by DEP on or after January 2005. Box 1 must be checked if a current, DEP approved Act 167 plan exists.
- The PCSM/SR Plan meets the standard design criteria from sections 102.8(g)(2) and (3) and the *Stormwater BMP Manual*. For projects involving oil and gas activities authorized by a permit issued under Chapter 78 or Chapter 78a (well pads) or pipelines and other similar utility infrastructure, post construction stormwater management requirements are met for all areas that are restored to preconstruction conditions or to a condition of meadow in good condition or better. [Note: PCSM plans must meet both the volume and rate requirements in the regulations, which are provided in the 2 sections mentioned in this paragraph].
- Alternative Design Standard – The attached PCSM/SR Plan was developed using approaches as provided in 102.8(g)(2)(iv) and 102.8(g)(3)(iii). Demonstrate/explain in the space provided below how this standard will be either more protective than what is required in 102.8(g)(2) and 102.8(g)(3) or will maintain and protect existing water quality and existing and designated uses.

**PCSM/SR BMP Alternative Standards:**

Has the alternative BMP or design standard been approved by the Department?

Yes

No – Do not submit the ESCGP-3 application and see Section (H) of the NOI Instructions concerning the alternative BMP approval process.

**Water Quality Compliance:**

Does the PCSM/SR plan comply with requirements for volume control?  Yes  No

If yes, is at least 90% of the disturbed area controlled by a PCSM BMP?  Yes  No

If yes, do you have the Standard PCSM Worksheet # 10 attached to show water quality compliance has achieved?

Yes  No

**SITE RESTORATION ONLY - MEET SECTION 102.8(g)(2) and (3). Per 102.8(n), WORKSHEET #10, #12 & #13 ARE NOT APPLICABLE**

If no, attach Standard PCSM Worksheets # 12 and #13 to show water quality compliance has achieved.

If PCSM/SR plan is not complying with the requirements for volume control, attach Standard PCSM Worksheets # 11, # 12 and #13 to show water quality compliance has achieved.

**a. PCSM/SR Plan Summary**

Provide a summary of proposed BMPs and their performance to manage PCSM/SR for the project.

All sites will be restored to pre-existing conditions. By limiting the disturbed areas, limiting extent and duration of disturbance and performing site restoration, these practices will eliminate the net change in rate, volume and water quality after construction.

Check all that apply  PCSM BMPs  SR BMPs

**b.** Do you have any information regarding riparian buffer which differs from what was submitted in the Section G, Riparian Buffer?

Yes  No

Explain:

**c. Thermal Impacts Analysis**

Explain how thermal impacts associated with this project were avoided, minimized, or mitigated.

Thermal impacts have been minimized by limiting the disturbed area to the maximum extent practicable. By minimizing the extent of the disturbed area, vegetative clearing has been minimized. Thermal impacts will also be minimizing the duration of disturbance and reseeding and restoring vegetative growth as soon as possible.

**d. Off-Site Discharge Analysis.**

Does the activity propose any off-site discharges to areas other than surface waters?  Yes  No

If yes, it is the applicant's responsibility to ensure that they have legal authority for any off-site discharge to neighboring properties.

The Applicant must provide a demonstration in both the E&S and PCSM/SR Plans that the discharge will not cause erosion, damage, or a nuisance to off-site properties.

**See PCSM Narrative, Section XI, Page 15**

**e. Summary Table for Supporting Calculation and Measurement Data**  
 (See NOI Instructions for additional guidance with this section)  
 The remainder of this section (Summary Table for Calculation and Measurement Data) does not need to be completed for areas of projects involving oil and gas activities authorized by Chapter 78 or Chapter 78a (well pads) or pipelines and other similar utility infrastructure which will be restored to meadow in good condition or better or existing conditions.

<b>Watershed Name: Perkiomen Creek</b>			
Volume Control design storm frequency <u>N/A</u> Rainfall amount <u>N/A</u> inches	Pre-construction	Post Construction	Net Change

**g. Critical PCSM Plan stages**

Identify and list critical stages of implementation of the PCSM Plan for which a licensed professional or designee shall be present on site.

License professional to be present during the site restoration activities as noted the in Site Restoration Schedule.

**SECTION H. POST CONSTRUCTION STORMWATER MANAGEMENT (PCSM) AND/OR SITE RESTORATION(SR) PLAN**

**See NOI Instructions for additional guidance with PCSM Plans**

PCSM/SR BMPs should be designed to use natural measures to eliminate pollution, infiltrate runoff, not require extensive construction/maintenance, promote pollutant reduction, and preserve the integrity of stream channels. All PCSM/SR BMPs proposed in the PCSM/SR Plan must be designed in accordance with Ch. 102, Ch. 78a for unconventional operations, Ch. 78 for conventional operations and the *Pennsylvania Stormwater Best Management Practices Manual (Stormwater BMP Manual)* (363-0300-002). If alternate design criteria are utilized for the proposed project, they must have prior approval by the Department, or the NOI Application will be returned to the Applicant.

After construction is completed, how much of the entire disturbed area will be restored to meadow in good condition or better, or existing conditions?  All  Partial  None

Include PCSM narrative and drawings for remaining impervious area. Also include a map showing the proposed contours of the site restoration plan.

If there are additional stages of the project prior to permit termination or expiration, list the stages and provide the documents required by subsection 'a' to section 'g' for each stage (e.g. partial restoration or changes to the amount of compacted areas, gravel, and/or impervious areas). Upload a narrative for each additional stage in addition to the drawings.

**EXAMPLE**

Stage No	Stage Name	PCSM Plan	SR Plan
Stage 1	Phase 1: Adelphia Gateway	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Stage 2	Phase 2A: Tilghman & Parkway Laterals (PA/DE State line to Transco)	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Stage 3	Phase 2B: Tilghman Lateral	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Stage 4		<input type="checkbox"/>	<input type="checkbox"/>

**Act 167 Consistency.** Check those that apply.

**Site:**

Is there an Act 167 Plan?  Yes  No

**Quakertown Compressor Station**

The attached PCSM/SR Plan is consistent with an applicable approved Act 167 Plan.

Complete the following for all approved Act 167 Stormwater Management Plans. (Use additional sheets if necessary)

Act 167 Plan Name	Date Adopted	Consistency Letter Included	<input type="checkbox"/>
<u>Tohickon Creek</u>	<u>February 28, 2002</u>	Verification Report Included	<input checked="" type="checkbox"/>

*Note: A consistency letter is not required if a verification report is provided. See NOI Instructions. The PCSM/SR Plan must satisfy either sub paragraph 1, 2, or 3 below. Check those that apply.*

- Act 167 Plan approvals on or after January 2005 – The attached PCSM/SR Plan, in its entirety, is consistent with all requirements pertaining to rate, volume, and water quality from an Act 167 Stormwater Management Plan approved by DEP on or after January 2005. Box 1 must be checked if a current, DEP approved Act 167 plan exists.
- The PCSM/SR Plan meets the standard design criteria from sections 102.8(g)(2) and (3) and the *Stormwater BMP Manual*. For projects involving oil and gas activities authorized by a permit issued under Chapter 78 or Chapter 78a (well pads) or pipelines and other similar utility infrastructure, post construction stormwater management requirements are met for all areas that are restored to preconstruction conditions or to a condition of meadow in good condition or better. [Note: PCSM plans must meet both the volume and rate requirements in the regulations, which are provided in the 2 sections mentioned in this paragraph].
- Alternative Design Standard – The attached PCSM/SR Plan was developed using approaches as provided in 102.8(g)(2)(iv) and 102.8(g)(3)(iii). Demonstrate/explain in the space provided below how this standard will be either more protective than what is required in 102.8(g)(2) and 102.8(g)(3) or will maintain and protect existing water quality and existing and designated uses.

**PCSM/SR BMP Alternative Standards:**

Has the alternative BMP or design standard been approved by the Department?

Yes

No – Do not submit the ESCGP-3 application and see Section (H) of the NOI Instructions concerning the alternative BMP approval process.

**Water Quality Compliance:**

Does the PCSM/SR plan comply with requirements for volume control?  Yes  No

If yes, is at least 90% of the disturbed area controlled by a PCSM BMP?  Yes  No

If yes, do you have the Standard PCSM Worksheet # 10 attached to show water quality compliance has achieved?

Yes  No

If no, attach Standard PCSM Worksheets # 12 and #13 to show water quality compliance has achieved.

If PCSM/SR plan is not complying with the requirements for volume control, attach Standard PCSM Worksheets # 11, # 12 and #13 to show water quality compliance has achieved.

**See PCSM Narrative, Section VII & App. D.1**

**a. PCSM/SR Plan Summary**

Provide a summary of proposed BMPs and their performance to manage PCSM/SR for the project.

The following Best Management Practices (BMP), in accordance with Pennsylvania Stormwater BMP Manual, dated December 2006, have been integrated into the design to reduce runoff volume, reduce peak rates and improve water quality. These structural BMPs will result in the prevention or minimization of increased stormwater runoff rate, volume and/or changes in stormwater runoff. Implementing these controls will preserve the integrity of stream channels and maintain and protect the physical, biological and chemical qualities of the receiving stream.

A non-vegetated managed release concept (MRC) BMP will be installed at Quakertown Compressor Station. The MRC BMP will be non-vegetated with underground storage chambers (Storm-tank). A stormwater swale with check dams will be installed upstream of the MRC BMP. This combination of structural BMPs serves the functions of volume reduction, runoff quality and peak rate reduction.

Check all that apply  PCSM BMPs  SR BMPs

**b. Do you have any information regarding riparian buffer which differs from what was submitted in the Section G, Riparian Buffer?**

Yes  No

Explain:

**c. Thermal Impacts Analysis**

Explain how thermal impacts associated with this project were avoided, minimized, or mitigated.

Thermal impacts associated with the project will be minimized and/or mitigated through the incorporation a subsurface MRC basin and a stormwater swale with check dams. Runoff from the impervious areas will be directed to the BMPs where the travel time is increased to store runoff, reducing the quantity and temperature of the runoff.

The subsurface basin at Quakertown Compressor Station will temporarily store stormwater runoff beneath the surface, away from direct sunlight and will promote the slow release of outflow to the surface waters.

**d. Off-Site Discharge Analysis.**

Does the activity propose any off-site discharges to areas other than surface waters?  Yes  No

If yes, it is the applicant's responsibility to ensure that they have legal authority for any off-site discharge to neighboring properties.

The Applicant must provide a demonstration in both the E&S and PCSM/SR Plans that the discharge will not cause erosion, damage, or a nuisance to off-site properties.

**See PCSM Narrative, Section XI, Page 15**

**e. Summary Table for Supporting Calculation and Measurement Data**  
 (See NOI Instructions for additional guidance with this section)  
 The remainder of this section (Summary Table for Calculation and Measurement Data) does not need to be completed for areas of projects involving oil and gas activities authorized by Chapter 78 or Chapter 78a (well pads) or pipelines and other similar utility infrastructure which will be restored to meadow in good condition or better or existing conditions.

<b>Watershed Name: Tohickon Creek (Site - Quakertown Compressor Site)</b>			
Volume Control design storm frequency 2-yr Rainfall amount 3.16 inches	Pre-construction	Post Construction	Net Change
Impervious area (acres)	0.006	0.390	0.384
Volume of stormwater runoff (acre-feet) without planned stormwater BMPs	0.203	0.295	+0.092
Volume of stormwater runoff (acre-feet) with planned stormwater BMPs		0.148	-0.056
Stormwater discharge rate for the design frequency storm	Pre-construction	Post Construction	Net Change
1) 2-Year/24-Hour	3.32	2.38	-0.94
2) 10-Year/24-Hour	5.85	3.67	-2.18
3) 50-year/24-Hour	9.48	5.44	-4.04
4) 100-year/24-Hour	11.54	6.67	-4.87

**f. Summary Description of PCSM/SR BMPs**

In the lists below, check the BMPs identified in the PCSM Plan. The primary function(s) of the BMP listed in the functions column (infiltration/recharge; detention/retention; water quality). Additional functions may be added if applicable to that BMP. List the stormwater volume and area of runoff to be treated by each BMP type when calculations are required. If any BMP in the PCSM/SR Plan is not listed below, describe it in the space provided after "Other". A summary table with infiltration testing information (Attachment E, included in the NOI Instructions) must be submitted for all Bio-infiltration BMPs included in PCSM/SR plan.

For Rate control provide the volume of stormwater treated and acres treated for the 100-year/24-hour storm event.

For volume control and water quality provide the volume of stormwater treated and acres treated for the 2-year/24-hour storm event.

Key for BMP purpose(s): VC = Volume Control; RC = Rate Control; and WQ = Water Quality

BMP	Function(s)	Purpose(s)	Volume of stormwater treated	Acres treated
<b>Site Restoration ONLY</b> <input type="checkbox"/> Restore Site to Meadow in Good Condition or Better, or Existing Conditions	Infiltration/Recharge Detention/WQ Treatment	<input type="checkbox"/> VC <input type="checkbox"/> RC <input type="checkbox"/> WQ	_____	_____

**g. Critical PCSM Plan stages**

Identify and list critical stages of implementation of the PCSM Plan for which a licensed professional or designee shall be present on site.

A licensed professional should be present and witness the following stages in construction:

Excavation and final grading of the BMP.

Placement of geotextile and aggregate within the BMP.

Construction of the outlet structure and discharging of piping from the BMP.

**SECTION H. POST CONSTRUCTION STORMWATER MANAGEMENT (PCSM) AND/OR SITE RESTORATION(SR) PLAN**

**See NOI Instructions for additional guidance with PCSM Plans**

PCSM/SR BMPs should be designed to use natural measures to eliminate pollution, infiltrate runoff, not require extensive construction/maintenance, promote pollutant reduction, and preserve the integrity of stream channels. All PCSM/SR BMPs proposed in the PCSM/SR Plan must be designed in accordance with Ch. 102, Ch. 78a for unconventional operations, Ch. 78 for conventional operations and the *Pennsylvania Stormwater Best Management Practices Manual (Stormwater BMP Manual)* (363-0300-002). If alternate design criteria are utilized for the proposed project, they must have prior approval by the Department, or the NOI Application will be returned to the Applicant.

After construction is completed, how much of the entire disturbed area will be restored to meadow in good condition or better, or existing conditions?  All  Partial  None

Include PCSM narrative and drawings for remaining impervious area. Also include a map showing the proposed contours of the site restoration plan.

If there are additional stages of the project prior to permit termination or expiration, list the stages and provide the documents required by subsection 'a' to section 'g' for each stage (e.g. partial restoration or changes to the amount of compacted areas, gravel, and/or impervious areas). Upload a narrative for each additional stage in addition to the drawings.

**EXAMPLE**

Stage No	Stage Name	PCSM Plan	SR Plan
Stage 1	Phase 1: Adelphia Gateway	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Stage 2	Phase 2A: Tilghman & Parkway Laterals (PA/DE State line to Transco)	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Stage 3	Phase 2B: Tilghman Lateral	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Stage 4		<input type="checkbox"/>	<input type="checkbox"/>

**Act 167 Consistency.** Check those that apply.

**Site:**

**Mainline Valve 2**

Is there an Act 167 Plan?  Yes  No

The attached PCSM/SR Plan is consistent with an applicable approved Act 167 Plan.

Complete the following for all approved Act 167 Stormwater Management Plans. (Use additional sheets if necessary)

Act 167 Plan Name	Date Adopted	Consistency Letter Included	<input type="checkbox"/>
<u>Valley Creek</u>	<u>July 30, 2010</u>	Verification Report Included	<input checked="" type="checkbox"/>

*Note: A consistency letter is not required if a verification report is provided. See NOI Instructions. The PCSM/SR Plan must satisfy either sub paragraph 1, 2, or 3 below. Check those that apply.*

- Act 167 Plan approvals on or after January 2005 – The attached PCSM/SR Plan, in its entirety, is consistent with all requirements pertaining to rate, volume, and water quality from an Act 167 Stormwater Management Plan approved by DEP on or after January 2005. Box 1 must be checked if a current, DEP approved Act 167 plan exists.
- The PCSM/SR Plan meets the standard design criteria from sections 102.8(g)(2) and (3) and the *Stormwater BMP Manual*. For projects involving oil and gas activities authorized by a permit issued under Chapter 78 or Chapter 78a (well pads) or pipelines and other similar utility infrastructure, post construction stormwater management requirements are met for all areas that are restored to preconstruction conditions or to a condition of meadow in good condition or better. [Note: PCSM plans must meet both the volume and rate requirements in the regulations, which are provided in the 2 sections mentioned in this paragraph].
- Alternative Design Standard – The attached PCSM/SR Plan was developed using approaches as provided in 102.8(g)(2)(iv) and 102.8(g)(3)(iii). Demonstrate/explain in the space provided below how this standard will be either more protective than what is required in 102.8(g)(2) and 102.8(g)(3) or will maintain and protect existing water quality and existing and designated uses.

**PCSM/SR BMP Alternative Standards:**

Has the alternative BMP or design standard been approved by the Department?

Yes

No – Do not submit the ESCGP-3 application and see Section (H) of the NOI Instructions concerning the alternative BMP approval process.

**Water Quality Compliance:**

Does the PCSM/SR plan comply with requirements for volume control?  Yes  No

If yes, is at least 90% of the disturbed area controlled by a PCSM BMP?  Yes  No

If yes, do you have the Standard PCSM Worksheet # 10 attached to show water quality compliance has achieved?

Yes  No

→ **SITE RESTORATION ONLY - MEET SECTION 102.8(g)(2) and (3). Per 102.8(n), WORKSHEET #10, #12 & #13 ARE NOT APPLICABLE**

If no, attach Standard PCSM Worksheets # 12 and #13 to show water quality compliance has achieved.

If PCSM/SR plan is not complying with the requirements for volume control, attach Standard PCSM Worksheets # 11, # 12 and #13 to show water quality compliance has achieved.

**a. PCSM/SR Plan Summary**

Provide a summary of proposed BMPs and their performance to manage PCSM/SR for the project.

All sites will be restored to pre-existing conditions. By limiting the disturbed areas, limiting extent and duration of disturbance and performing site restoration, these practices will eliminate the net change in rate, volume and water quality after construction.

Check all that apply  PCSM BMPs  SR BMPs

**b.** Do you have any information regarding riparian buffer which differs from what was submitted in the Section G, Riparian Buffer?

Yes  No

Explain:

**c. Thermal Impacts Analysis**

Explain how thermal impacts associated with this project were avoided, minimized, or mitigated.

Thermal impacts have been minimized by limiting the disturbed area to the maximum extent practicable. By minimizing the extent of the disturbed area, vegetative clearing has been minimized. Thermal impacts will also be minimizing the duration of disturbance and reseeding and restoring vegetative growth as soon as possible.

**d. Off-Site Discharge Analysis.**

Does the activity propose any off-site discharges to areas other than surface waters?  Yes  No

If yes, it is the applicant's responsibility to ensure that they have legal authority for any off-site discharge to neighboring properties.

The Applicant must provide a demonstration in both the E&S and PCSM/SR Plans that the discharge will not cause erosion, damage, or a nuisance to off-site properties.

**See PCSM Narrative, Section XI, Page 15**

**e. Summary Table for Supporting Calculation and Measurement Data**  
 (See NOI Instructions for additional guidance with this section)

The remainder of this section (Summary Table for Calculation and Measurement Data) does not need to be completed for areas of projects involving oil and gas activities authorized by Chapter 78 or Chapter 78a (well pads) or pipelines and other similar utility infrastructure which will be restored to meadow in good condition or better or existing conditions.

**Watershed Name: Valley Creek**

Volume Control design storm frequency <u>N/A</u> Rainfall amount <u>N/A</u> inches	Pre-construction	Post Construction	Net Change
Impervious area (acres)	N/A	N/A	N/A
Volume of stormwater runoff (acre-feet) without planned stormwater BMPs	N/A	N/A	N/A
Volume of stormwater runoff (acre-feet) with planned stormwater BMPs		N/A	N/A
Stormwater discharge rate for the design frequency storm	Pre-construction	Post Construction	Net Change
1) 2-Year/24-Hour	N/A	N/A	N/A
2) 10-Year/24-Hour	N/A	N/A	N/A
3) 50-year/24-Hour	N/A	N/A	N/A
4) 100-year/24-Hour	N/A	N/A	N/A

**f. Summary Description of PCSM/SR BMPs SITE RESTORATION ONLY**

In the lists below, check the BMPs identified in the PCSM Plan. The primary function(s) of the BMP listed in the functions column (infiltration/recharge; detention/retention; water quality). Additional functions may be added if applicable to that BMP. List the stormwater volume and area of runoff to be treated by each BMP type when calculations are required. If any BMP in the PCSM/SR Plan is not listed below, describe it in the space provided after "Other". A summary table with infiltration testing information (Attachment E, included in the NOI Instructions) must be submitted for all Bio-infiltration BMPs included in PCSM/SR plan.

For Rate control provide the volume of stormwater treated and acres treated for the 100-year/24-hour storm event.

For volume control and water quality provide the volume of stormwater treated and acres treated for the 2-year/24-hour storm event.

Key for BMP purpose(s): VC = Volume Control; RC = Rate Control; and WQ = Water Quality

BMP	Function(s)	Purpose(s)	Volume of stormwater treated	Acres treated

**g. Critical PCSM Plan stages**

Identify and list critical stages of implementation of the PCSM Plan for which a licensed professional or designee shall be present on site.

License professional to be present during the site restoration activities as noted the in Site Restoration Schedule.

## CHESTER CREEK

### SECTION I. ANTIDegradation ANALYSIS

**This section must be completed where earth disturbance activities will be conducted in the watershed of a surface water with an existing or designated use of exceptional value or high quality pursuant to Chapter 93 (relating to water quality standards), projects where any part is located in an exceptional value wetland in accordance with 25 Pa. Code § 105.17, and projects where any part is located in the watershed of an impaired surface water where the cause of impairment is identified as siltation.**

#### Part 1 - NONDISCHARGE ALTERNATIVES EVALUATION

The applicant must consider and describe any and all non-discharge alternatives for the entire project area which are environmentally sound and will:

- Minimize accelerated erosion and sedimentation during the earth disturbance activity
- Achieve no net change from pre-development to post-development volume, rate and concentration of pollutants in water quality

#### E & S Plan

#### PCSM/SR Plan

Check off the environmentally sound nondischarge Best Management Practices (BMPs) listed below to be used prior to, during, and after earth disturbance activities that have been incorporated into your E & S Plan based on the site analysis. For non-discharge BMPs not checked, provide an explanation of why they were not utilized. Also for BMPs checked, provide an explanation of why they were utilized. (Provide the analysis and attach additional sheets if necessary)

Check off the environmentally sound nondischarge Best Management Practices (BMPs) listed below to be used after construction that have been incorporated into the PCSM/SR Plan based on your site analysis. For non-discharge BMPs not checked, provide an explanation of why they were not utilized. Also for BMPs checked, provide an explanation of why they were utilized. (Provide the analysis and attach additional sheets if necessary)

An alternative location, configuration or location of discharge was not utilized since upgrades are required at these existing sites; however, LOD is minimized. Regulations do not require a riparian forest buffer due to proximity to site.

An alternative location, configuration or location of discharge was not utilized since upgrades are required at these existing sites; however, LOD is minimized. Regulations do not require a riparian forest buffer due to proximity to site. No BMPs proposed, therefore no infiltration and water reuse is applicable .

#### **Nondischarge BMPs**

- Alternative Siting
  - Alternative location
  - Alternative configuration
  - Alternative location of discharge
- Limited Disturbed Area
- Limiting Extent & Duration of Disturbance (Phasing, Sequencing)
- Riparian Buffers (150 ft. min.)
- Riparian Forest Buffer (150 ft. min.)
- Other \_\_\_\_\_

Will the non-discharge alternative BMPs eliminate the net change in rate, volume and quality during construction?

- Yes  No

If yes, antidegradation analysis is complete.  
 If no, proceed to Part 2.

Will the non-discharge alternative BMPs eliminate the net change in rate, volume and quality after construction?

- Yes  No

If yes, antidegradation analysis is complete.  
 If no, proceed to Part 2.

## NAAMANS CREEK

### PART 2 - ANTIDEGRADATION BEST AVAILABLE COMBINATION OF TECHNOLOGIES (ABACT)

If the net change in stormwater discharge from or after construction is not fully managed by nondischarge BMPs, the applicant must utilize ABACT BMPs to manage the difference. The Applicant must specify whether the discharge will occur during construction, post-construction or both, and identify the technologies that will be used to ensure that the discharge will be a non-degrading discharge. ABACT BMPs include but are not limited to:

**SECTION J. COMPLIANCE HISTORY REVIEW**

Is/was the applicant(s) in violation of any Department regulation, order, schedule of compliance or permit or in violation of any department regulated activities within the past five years?

Yes     No

If yes, provide the permit number or facility name, a brief description of the violation, the compliance schedule (including dates and steps to achieve compliance) and the current compliance status. (Attach additional information on a separate sheet, when necessary)

**Permit Program or Activity:** \_\_\_\_\_ **Permit Number (if applicable):** \_\_\_\_\_

**Brief Description of non-compliance:**

Steps taken to achieve compliance

Date(s) compliance achieved

Current Compliance Status:  In-Compliance     In Non-Compliance

If in non-compliance, attach schedule for achieving compliance.

**SECTION K. CERTIFICATION BY PERSON PREPARING E&S AND PCSM/SR PLANS**

I do hereby certify to the best of my knowledge, information, and belief, that the Erosion and Sediment Control and PCSM/Site Restoration Plans are true and correct, represent actual field conditions, and are in accordance with the 25 Pa. Code Chapters 78/78a and 102 of the Department's rules and regulations. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment.

**EXPEDITED REVIEW PROCESS**

In addition to the certification required above, applicants using the expedited permit review process must attach an E&S and PCSM/Site Restoration Plans developed and sealed by a licensed professional engineer, surveyor or professional geologist. The plans shall contain the following certification:

*I do hereby certify to the best of my knowledge, information, and belief, that the E & S Control and PCSM/SR BMPs are true and correct, represent actual field conditions and are in accordance with the 25 Pa. Code Chapters 78 / 78a and 102 of the Department's rules and regulations. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment.*

**SECTION L. APPLICANT CERTIFICATION**

Applicant Certification

I certify under penalty of law, as provided by 18 Pa. C.S.A. § 4904, that this application and all related attachments were prepared by me or under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my own knowledge and on inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. The responsible official's signature also verifies that the activity is eligible to participate in the ESCGP, and that the applicant agrees to abide by the terms and conditions of the permit. BMP's, E&S Plan, PPC Plan, PCSM Plan, and other controls are being or will be, implemented to ensure that water quality standards and effluent limits are attained.

I grant permission to the agencies responsible for the permitting of this work, or their duly authorized representative to enter the project site for inspection purposes. I will abide by the conditions of the permit if issued and will not begin work prior to permit issuance.

(For individuals no indication of title is necessary, choose the box below. All others proceed to the next paragraph)

**Individual; proceed to signature portion.**

I hereby certify under penalty of law, as provided by 18 Pa. C.S.A. § 4904, that I am the person who is responsible for decision-making regarding environmental compliance functions for Adelphia Gateway, LLC, the manager of one or more manufacturing, production, or operating facilities of the applicant and am authorized to make management decisions which govern the operation of regulated facility including having explicit or implicit duty of making major capital investment recommendations, and initiating and directing other comprehensive measures to assure the applicant's long term environmental compliance with environmental laws and regulations; and I am responsible for ensuring that the necessary systems are established or actions taken to gather complete and accurate information for permit application requirements.

Summary of Bio-Infiltration BMPs														
Proposed Structural bio-Infiltration BMPs (site specific)	Infiltration Information					Drainage Information				BMP Information				
	Measured Infiltration Rate <sup>1</sup> (in./hr)	Factor of safety (min. of 2)	Design Infiltration rate (in./hr)	De-watering time <sup>2</sup> (hr)	Elevation of limiting zone-water table bedrock, etc. <sup>3</sup>	Total drainage area to BMP (sq. ft)	Total impervious drainage area to BMP (sq. ft)	Infiltration BMP Surface area (sq. ft)	Volume of runoff tributary to BMP during the 2yr/24 hr design storm <sup>4</sup> (cf)	Calculated removed volume (cf)	Maximum water surface elevation in BMP from 2yr storm <sup>6</sup>	Infiltration elevation bottom of bed/basin <sup>6</sup>	Elevation of infiltration test <sup>7</sup>	Elevation of E&S sediment basin bottom (if applies)
Transco: Subsurface Infiltration Bed	0.26	2	0.13	71	N/A	33,410	6,446	4,385	3,233	N/A	N/A	N/A	N/A	N/A
Marcus Hook: Vegetated MRC BMP	N/A	N/A	N/A	N/A	N/A	95,997	22,777	16,833	18,619	N/A	N/A	N/A	N/A	N/A
Quakertown: Non-vegetated MRC BMP	N/A	N/A	N/A	N/A	N/A	47,481	15,068	3,755	6,451	N/A	N/A	N/A	N/A	N/A

All information should be based on the 2-yr/24-hr storm.

Provide page numbers from the stormwater narrative identifying the location of the above information.

<sup>1</sup>The infiltration testing information should be located on the plan view of the PCSM plan and should include infiltration test elevation and rate

<sup>2</sup>Can include active infiltration time-dewatering time should not exceed 72 hours after the 2-yr/24-hr storm

<sup>3</sup>Depth to limiting zone is recommended to be at least 2 ft below infiltration

<sup>4</sup>The value should be greater than or equal to the volume to be infiltrated or managed by the BMP

<sup>6</sup>A maximum of 2 ft hydraulic head is recommended

<sup>7</sup>Provide supporting field notes/documentation from soil evaluation

Any deviation from the recommendations above should be adequately justified by a qualified professional and included with the application.

**Note: This chart is for summary purposes only and should be consistent with all design calculations and worksheets.**
