EXECUTIVE SUMMARY

Groundwater and Environmental Services, Inc. (GES) has prepared this Data Gap Pre-Design Investigation Report: Volume 2 Groundwater and Surface Water on behalf of the Pennsylvania Department of Environmental Protection (DEP) for the Bishop Tube HSCA Site (Site) located in East Whiteland Township, Chester County, Pennsylvania. On July 15, 2026, GES finalized Volume 1 of the report, which discusses the soil investigation activities. The purposes of the groundwater and surface water data gap pre-design investigation were to (1) install a new nested monitoring well set in the vicinity of the western Village Way cul-de-sac to investigate a groundwater quality data gap in that area; and (2) conduct a complete synchronous groundwater and surface water monitoring and sampling event of the full monitoring well network to evaluate Site groundwater and surface water for perfluoroalkyl and polyfluoroalkyl substances (PFAS), hexavalent chromium [Cr(VI)], and all other current Site constituents of concern (COCs).

The source property is an approximate 13.7-acre former stainless steel tube manufacturing facility located at 1 South Malin Road in Malvern, Pennsylvania. The area defined as the Site includes the area within the Source Property boundaries and the extent of groundwater contamination beyond the Source Property boundaries.

In January 2021, Roux Associates (Roux) submitted a Remedial Investigation Report and Feasibility Study (RI/FS), which were accepted by DEP. The RI/FS identified the Site COCs to include compounds related to historical manufacturing operations at the Site. Specifically, the RI/FS COCs for the Site included among other contaminants chlorinated solvents and inorganics (metals and fluoride).

In 2021 and 2022, Roux conducted additional investigation activities to complete soil delineation, refine the COC list for the Site, and evaluate PFAS in groundwater and surface water. The soil samples were analyzed for total chromium, Cr(VI), nickel, and fluoride. The results of this sampling concluded that the Cr(VI) was not detected at concentrations above PA Act 2 medium specific concentrations (MSCs). However, fluoride was detected at concentrations above the PA Act 2 MSCs in multiple locations. Also, a partial round of groundwater samples was collected from a subset of the wells within the monitoring well network and analyzed for PFAS. It was determined that select PFAS compounds were detected at concentrations above the PA Act 2 MSCs established at that time. As a result of the additional investigation activities conducted by Roux, DEP updated the COC list for the Site to include perfluorooctanoic acid (PFOA) in addition to the COCs in the originally defined list presented in the RI/FS. Additionally, in its September 2022 Statement of Decision (SOD) for the Site, DEP determined that further delineation of fluoride in soils and of PFAS in soils and groundwater was needed.

GES completed the groundwater and surface water gap pre-design investigation activities between March and June 2026. The groundwater and surface water investigation activities conducted by GES at the Site during this time period included: advancement of an open rock pilot borehole; a downhole geophysical investigation; packer testing of select intervals within the pilot borehole; installation of a new nested monitoring well set to isolate three water-bearing intervals; and completion of a full round of groundwater and surface water sampling to evaluate current concentrations of Site COCs and determine distribution of PFAS, fluoride, and Cr(VI) at the Site.

The full monitoring well network included 57 overburden wells, 43 shallow bedrock wells, 17 intermediate bedrock wells, and 23 deep bedrock monitoring wells at the Site.

The following conclusions can be drawn based on review of the groundwater and surface water data gap pre-design investigation analytical results:

- Chlorinated solvents, which were previously identified as Site COCs, were detected at concentrations above the PA Act 2 MSC for a Residential, Used Aquifer in newly installed nested monitoring well set MW-85A and MW-85B. These exceedances of the relevant standards indicate that the shallow and intermediate bedrock zones are impacted on the east side of Little Valley Creek and in closer proximity to the residential homes on the west end of Village Way than had been originally identified.
- PFOA and PFOS were detected at concentrations above the PA Act 2 Residential, Used Aquifer MSCs in groundwater samples. The highest concentrations of PFOA were detected in overburden groundwater in proximity to the former vapor degreaser located in Building 8.
- PFOA and PFOS were detected at concentrations above relevant surface water screening values in all sampling locations (SW-1 and SW-3 through SW-10).
- Cr(VI) was detected at concentrations above the applicable surface water screening criteria in all sampling locations (SW-3 through SW-10), except SW-1 (the most upstream location).
- Groundwater elevations and related flow directions and gradients are consistent with previous investigations. However, localized mounding and sinks observed in the intermediate and deep bedrock groundwater monitoring zones may affect localized flow dynamics in the vicinity of the east side of Little Valley Creek and in closer proximity to the residential homes on the west end of Village Way.

Based on the conclusions listed above, the following activities are recommended:

- Sampling of monitoring wells that could not be accessed or located during this round of sampling, including monitoring wells located inside Building 5 (i.e., MW-26, MW-66), should be attempted again after the building is demolished.
- During any future groundwater sampling of the full monitoring well network and surface water sampling for VOC analysis, all samples where high concentrations of VOCs are not expected should be analyzed at a low-level concentration (or Selected Ion Monitoring [SIM]) method to attain necessary reporting limits (i.e., 1,2-dichloroethane).
- Additional investigation to the east of the Source Property, including:
 - o Implementation of a supplemental vapor intrusion (VI) assessment in the vicinity of MW-85 including an evaluation of potential preferential vapor migration pathways.

- o Installation and sampling of additional monitoring wells to the southeast and east-southeast of MW-85 to further define the extent of impacts in the overburden and shallow bedrock zones in this area of the Site.
- Additional investigation along the northern edge of the approximate TCE plume boundary, including:
 - o Implementation of a supplemental vapor intrusion (VI) evaluation, including an evaluation of potential preferential vapor migration pathways.
 - o Potential installation and sampling of an additional monitoring well within the current approximate extent of the TCE plume and where the approximate plume intersects Conestoga Road to further define the extent of impacts in the shallow bedrock zones in this area of the Site.
- Additional delineation of the PFAS overburden groundwater plume to the west and south of the former vapor degreaser area in Building 8 to evaluate potential contributions from off-property sources in addition to the impacts identified to be correlated to the former vapor degreaser in Building 8.
- Based on the exceedance for PFOS in the Field Blank collected on June 5, 2026, confirmatory PFAS sampling at select monitoring wells (MW-13, MW-30CR, MW-85A, MW-85B, PZ-1, PZ-6, PZ-7, and PZ-9) is recommended.
- Based on the widespread detections and exceedances of select PFAS compounds at the Site, a plume-wide evaluation of PFAS mixtures is recommended to determine concentrations of various compounds spatially across the plume. This information will be utilized to determine potential off-site sources and/or additional source areas.
- Based on the observation of localized groundwater mounding and sinks in the intermediate and deep bedrock zones and the potential for large fluctuations in groundwater levels in these areas due to the effects of fracture flow, long-duration water level transducer monitoring is recommended for monitoring wells MW-43C, MW-57B, MW-85B, and other, to be determined, surrounding monitoring wells, to better understand the localized flow dynamics between the groundwater monitoring zones in these areas.

1 Introduction

Groundwater and Environmental Services, Inc. (GES) has prepared this Data Gap Pre-Design Investigation Report: Volume 2 Groundwater and Surface Water on behalf of the Pennsylvania Department of Environmental Protection (DEP) for the Bishop Tube Hazardous Sites Cleanup Act (HSCA) Site (Site), located in East Whiteland Township, Chester County, Pennsylvania, to document specific additional investigation activities and analyses that were conducted by GES at the Site from March 2026 through June 2026. On July 15, 2026, GES finalized Volume 1 of the report which discusses the soil investigation activities. A map depicting the location of the Site with topographic information on the surrounding area is presented as **Figure 1**. The purposes of the groundwater and surface water data gap pre-design investigation were to (1) install a new nested monitoring well set in the vicinity of the western Village Way cul-de-sac to investigate a groundwater quality data gap in that area; and (2) conduct a complete synchronous groundwater and surface water monitoring and sampling event of the full monitoring well network to evaluate Site groundwater and surface water for perfluoroalkyl and polyfluoroalkyl substances (PFAS), hexavalent chromium (Cr(VI)), and all other current Site constituents of concern (COCs).

The remainder of this report is organized as follows:

- **Site Description and Background** - This section provides a discussion of Site background information, including the location and description of the Site physical conditions, the physiographic setting, and Site history.
- **Groundwater and Surface Water Investigation Activities** – This section describes the data gap pre-design groundwater investigation plan, sampling activities, analysis methodologies, and modifications to the original Work Plan.
- **Summary of Groundwater and Surface Water Data Gap Pre-Design Investigation Analytical Results** – This section discusses the laboratory analytical results for the groundwater and surface water samples collected during the data gap pre-design investigation activities.
- **Investigation Derived Waste Disposal** – This section summarizes the waste classification and handling prior to disposal.
- **Conclusions** – This section summarizes the conclusions that were made based on the results of the investigation.
- **Recommendations** – This section presents recommendations for additional work determined to be needed at the Site based on the conclusions made from the additional data collected during this investigation.

During all field activities, GES personnel followed all appropriate worker health and safety guidelines as per Occupational Safety and Health Administration (OSHA) 29 CFR 1910.120. All operations were conducted using Level D protection measures with proper respiratory protection equipment and additional protective clothing readily available for use if site conditions warranted

an upgrade to Level C protection. A site-specific health and safety plan (HASP) detailing applicable safety precautions, as well as specific emergency procedures, was prepared for this Site. A copy of the site-specific health and safety plan is on file at GES and DEP offices.

2 Site Description and Background

A Site Description and Background discussion was previously included as Section 2 of the Data Gap Pre-Design Investigation Report Volume 1: Soil. The figures from Volume 1 were included in this report for ease of reference:

- **Figure 1** (Site Location Map) illustrates the location of the Site on the U.S. Geological Survey (USGS) 7.5-Minute Topographic Map for Malvern, Pennsylvania.
- **Figure 2** (Site Map) is an aerial photograph, which illustrates the layout of the source property.
- **Figure 3** (Target Treatment Area) includes Areas of Concern (AOCs) in soil.

3 Groundwater and Surface Water Investigation Activities

This section describes the groundwater and surface water investigation activities conducted by GES at the Site from March 2026 through June 2026 including: advancement of an open rock pilot borehole; a downhole geophysical investigation; packer testing of select intervals within the pilot borehole; installation of a new nested monitoring well set; and completion of a full round of groundwater and surface water sampling to evaluate current concentrations of Site COCs and determine distribution of PFAS, fluoride, and Cr(VI) at the Site.

3.1 Pilot Open Rock Borehole Advancement

GES retained Cascade Drilling, LP (Cascade) to complete the installation of a new nested monitoring well set (MW-85) to isolate three water-bearing intervals. Prior to initiating subsurface work, the Pennsylvania One Call System (POCS) was utilized to request location of underground lines within the project area to satisfy requirements of the Underground Utility Line Protection Law, Pennsylvania Act 287 of 1974, amended by Act 50 of 2017. Additionally, the monitoring well location was hand-cleared to five (5) feet below ground surface (bgs) with a hand auger.

Nested monitoring well MW-85 was installed over two separate mobilizations. During the first mobilization, from March 10 through March 19, 2026, a 6-inch diameter open rock pilot borehole was advanced to a total depth of 240 feet below ground surface (bgs). The pilot borehole was advanced utilizing sonic drilling methodologies to allow for completion of downhole geophysics to evaluate bedrock fracture depth, orientation, and vertical groundwater flow components; and implementation of packer testing to determine fracture yield and to collect constituent concentration data from yielding fracture intervals. During the advancement of the pilot borehole, GES identified the depth to weathered bedrock, the depth to competent bedrock, and fractured/water-bearing zones. Additionally, the composition, color, texture, and moisture content of the soil and bedrock was monitored as it was recovered and recorded on a subsurface log

(Appendix A). The overburden and bedrock (limestone) lithologies identified during the pilot borehole installation were consistent with previous investigations at the Site.

3.2 Downhole Geophysics

GES retained Advanced Geophysical Services, Inc. (AGS) to complete a downhole geophysical investigation of the pilot borehole to assist with locating water-bearing zones and/or fractures, confirming groundwater flow conditions, and identifying primary monitoring intervals in each zone. On March 20 and 24, 2026, AGS completed the following suite of geophysical analyses: heat pulse flowmeter, optical televiewer, acoustic televiewer, and 3-arm caliper. Following the analyses, AGS produced a geophysical well log showing borehole features, including borehole diameter, fracture depth/location/orientation, and vertical water flow direction within the borehole.

The results of the downhole geophysical investigation confirmed that the bedrock was generally competent with discreet fractured intervals exhibiting relatively low groundwater yield at the MW-85 well nest location. Based on the geophysical log provided by AGS, the following depth intervals were identified for packer testing: 65-80 feet, 100-115 feet, 135-150 feet, 165-180 feet, and 190-205 feet. A copy of the downhole geophysical well log and report can be found in **Appendix B**.

3.3 Packer Testing

GES retained EarthData Northeast (EDN) to complete packer testing of fractured/water bearing intervals identified during the downhole geophysical investigation. Between March 31 and April 2, 2026, EDN conducted testing of the 65-80 feet, 100-115 feet, 135-150 feet, 165-180 feet, and 190-205 feet depth intervals within the pilot borehole to determine yield and groundwater quality. The packer testing consisted of collecting static head pressure data, completing a falling head slug test, purging groundwater from the packer intervals, collecting discrete groundwater samples, and collecting recovery head pressure data for each targeted fracture location. A copy of the packer testing results is included in **Appendix C**.

All intervals were evaluated based on their measured groundwater yield, and the four highest yielding zones were selected for sampling. A submersible pump was utilized to purge approximately three (3) packer interval volumes and collect groundwater samples from the following intervals: 65-80 feet, 135-150 feet, 165-180 feet, and 190-205 feet. The groundwater samples were submitted to Eurofins Lancaster Laboratories Environmental, Inc. (ELLE) for analysis of Target Compound List (TCL) VOCs (including TCE and PCE and all daughter products) via EPA Method 8260D. A copy of the laboratory analytical results and packer testing logs for each interval are included in **Appendix D**.

3.4 Monitoring Well Installation

After completion of the downhole geophysical investigation and packer testing, Cascade remobilized to the Site to complete installation of nested monitoring well MW-85, which included three well intervals (i.e., one shallow and two intermediate interval wells). The purpose of this nested monitoring well set is to evaluate groundwater conditions and quality in the northeast

corner of the source property portion of the Site. Based on the results of the downhole geophysical investigation and packer testing results, the following depth intervals were selected: 66-76 feet, 135-145 feet, and 190-205 feet. The 66-76 foot interval is within the previously established shallow bedrock zone for the Site, and the 135-145 foot and 190-205 foot intervals are within the previously established intermediate bedrock zone for the Site. The 6-inch diameter open pilot borehole was reamed via sonic drilling methodologies to proper diameters for construction of each nested interval: a 10-inch diameter hole was reamed across the 66-76 foot depth interval for the shallow interval well; an 8-inch diameter hole was reamed across the 135-145 foot depth interval for the first intermediate interval well; and the 190-205 foot depth interval was left at the 6-inch diameter hole for the second intermediate interval well. Upon completion of the reaming activities, the bottom of the pilot borehole was grouted from a depth of 205 feet to the hole bottom (240 feet) to ensure proper sealing of the bottom interval. This bottom interval did not intersect any water-bearing fractures.

The nested monitoring wells were constructed with two-inch diameter Schedule 40 polyvinyl chloride (PVC) riser and 0.020-inch slotted Schedule 40 PVC screen, with the exception of the deeper intermediate nested well (190-205 foot interval), which was constructed utilizing Schedule 80 PVC riser and screen due to the depth. The annular space between the borehole wall and the PVC screen intervals was filled with No. 2 sand to approximately two feet above the top of the screened intervals. The sand packs for the intermediate and shallow nested wells also extend approximately two feet below the screened intervals. A bentonite seal was placed above the sand pack intervals of each nested monitoring well screen and the annular space between the deeper intermediate/intermediate/shallow screened intervals was grouted to approximately 2 feet below the start of the next screened interval. Sufficient time (one-hour minimum) was allotted for each bentonite seal to set before grouting between each screened interval. A three-foot thick bentonite seal was placed above the sand pack of the shallow nested monitoring well and the remaining annular space was grouted to surface grade. The nested well was finished as a locking steel stickup, set approximately three feet above ground surface. A watertight locking gripper plug was fitted to each nested monitoring well PVC riser within the steel stickup to restrict access. The new wells were identified as MW-85A (66 – 76 ft), MW-85B (135 – 145 ft), and MW-85C (190 – 205 ft). Well construction diagrams for this nested well set are presented in **Appendix A**.

Following the installation of the nested monitoring well set and prior to initiating groundwater monitoring activities, GES developed the newly installed monitoring wells in accordance with generally accepted practices outlined in the GES SOP for Monitoring Well Development included in the Sampling Analysis Plan/Quality Assurance Project Plan (SAP/QAPP). It should be noted that after completion of the installation of the nested well, a pinch in the well casing was identified in MW-85C, which did not allow for complete development or the installation of a sampling device. Therefore, this well was not included in the gauging and sampling event described in **Section 3.5**.

3.5 Groundwater Sampling

On April 23-24 and April 30, 2026, GES conducted Site reconnaissance to locate all monitoring wells within the network. During the reconnaissance, GES documented location, condition, presence of existing passive sampling tethers, and access to all monitoring wells. It was

determined that 19 wells were inaccessible, could not be located, were previously abandoned, or were assumed destroyed. After completion of the reconnaissance, GES prepared for a complete synchronous sampling event of the wells that could be located by ordering all necessary HydraSleeve™ samplers, new tethers, and tether weights.

Between May 19 and June 5, 2026, GES conducted groundwater monitoring and sampling of the full monitoring well network in accordance with the SAP/QAPP. The full monitoring well network included the newly installed nested monitoring well set (MW-85), 57 overburden wells, 43 shallow bedrock wells, 17 intermediate bedrock wells, and 23 deep bedrock monitoring wells at the Site. The monitoring well locations can be found on **Figure 4**. The groundwater sampling activities utilized disposable HydraSleeve™ samplers for all wells, with the exception of MW-85A, which was sampled via traditional low-flow sampling methodologies due to a slight pinch in the well casing that would not allow installation of a HydraSleeve™ sampler.

Initially, GES mobilized to all monitoring wells included in the sampling plan to gauge depth to water, gauge depth to bottom, and deploy the tethers and HydraSleeve™ samplers. During the effort, GES field personnel noted any discrepancies in current conditions versus previously recorded well sampling equipment settings and adjusted the tethers accordingly. After deployment of the sampling equipment, GES allowed a minimum of 24 hours prior to collection of the samples. As per the Work Plan for this sampling event, a subset of wells (i.e., the monitoring wells located to the south of Lancaster Avenue) were identified for additional inorganic analyses (dissolved metals, Cr(VI), and fluoride). To achieve the sample collection for select wells in this group, a second HydraSleeve™ was deployed after collection of the primary (VOC and PFAS) samples to obtain additional volume for the inorganic analyses. The additional HydraSleeve™ samplers were deployed for a minimum of 24 hours prior to collection of the additional sample volume.

The collected groundwater samples were packed in a cooler on ice and submitted via laboratory courier or hand delivered under proper chain-of custody procedures to ELLE for standard turn-around time (TAT) analyses. ELLE is accredited by the Pennsylvania Bureau of Laboratories, Laboratory Accreditation Program (LAP), for all analytical parameters, methods, and technologies used per 25 Pa. Code, Chapter 252 under the National Environmental Laboratory Accreditation Program (NELAP).

The complete set of groundwater samples were submitted for laboratory analysis of TCL VOCs via EPA Method 8260D, and PFAS via EPA Method 1633A. Groundwater samples from the monitoring wells south of Lancaster Avenue were also submitted for laboratory analysis of dissolved metals via EPA Method 6020B, dissolved Cr(VI) via EPA Method 218.6, and dissolved fluoride via EPA Method 9056A.

Quality Assurance/Quality Control (QA/QC) samples during the groundwater sampling activities included one duplicate sample and one field blank per every 20 samples or fraction thereof. One trip blank, per day, per cooler, with VOC samples, was also submitted.

3.6 Surface Water Sampling

On June 8, 2026, GES conducted surface water sampling at the previously established surface water sampling locations, SW-1 through SW-10, at the Site.

Surface water samples were collected using disposable bailers with as little agitation as possible. The surface water sample collection sequence was, as follows: samples for VOC analysis were collected first; samples for PFAS analysis were collected second; samples for dissolved metals analysis were collected third; and samples for fluoride analysis were collected last. Note that surface water sampling location SW-2 could not be sampled, as it was observed to have minimal, stagnant water present with excessive algae buildup. All other surface water sample locations were sampled without issue.

The surface water samples were packed in a cooler on ice and hand-delivered under proper chain-of custody procedures to ELLE for standard turn-around time (TAT) analyses. The surface water samples were submitted for laboratory analysis of TCL VOCs via EPA Method 8260D, dissolved metals via EPA Method 6020B, dissolved Cr(VI) via EPA Method 218.6, dissolved fluoride via EPA Method 9056A, and PFAS via EPA Method 1633A. In addition, surface water samples were submitted for laboratory analysis of total manganese, as well as dissolved magnesium, and dissolved calcium (for total hardness calculation) via EPA Method 6020B.

QA/QC samples for surface water samples included one duplicate sample and one field blank per every 20 samples or fraction thereof. One trip blank per day, per cooler, with VOC samples, was also submitted.

3.7 Work Plan Deviations

During the groundwater and surface water sampling activities, the following deviations from the Work Plan were necessary for the reasons identified.

- MW-85C was not included in the gauging and sampling activities.
 - o After installation of the nested monitoring well and during well development, it was determined that the PVC casing for MW-85C was pinched and sampling equipment could not be advanced to the desired depth.
 - o Based on an assessment by the drilling contractor, it is suspected that the curing temperature of the grout seal softened the PVC casing and allowed deformation from soil or rock settlement in that zone during tooling removal.
- Nineteen wells identified in the original sampling plan were not sampled because they were determined to be abandoned, destroyed, unable to be located, inaccessible due to safety concerns, or having insufficient water to collect a sample.
 - o The following monitoring wells were not gauged or sampled: MW-07, MW-07(MOBIL), MW-08, MW-12, MW-14D(MOBIL), MW-16, MW-17, MW-19, MW-23, MW-29, MW-30, MW-21, MW-34, MW-41, MW-55, MW-59A, MW-59B, MW-59C, MW-66, and MW-85C.

- o The monitoring wells that were removed from the sampling plan are identified in **Table 1** as destroyed, abandoned, inaccessible, could not be located, or had insufficient water for sample collection.
- Additional HydraSleeves™ for inorganics were deployed in select monitoring wells.
 - o For monitoring wells located south of Lancaster Avenue that included metals/inorganics analysis, deployment of a second HydraSleeve™ was necessary to obtain additional sample volume.
 - o Sample collection from the second HydraSleeve™ was completed a minimum of 24 hours after deployment.
 - o The monitoring well locations that required deployment of a second HydraSleeves™ are indicated on the field logs included in **Appendix E**.
- MW-85A was sampled via low flow methodologies instead of HydraSleeve™.
 - o After installation of the nested monitoring well and during well development, it was determined that the PVC casing for MW-85A had a slight pinch, which would not allow deployment of a HydraSleeve™ with a bottom weight attached. The well was sampled via low-flow methodology utilizing a peristaltic pump. GES field personnel followed GES' Standard Operating Procedure (FM-8.5 Rev. 005a) for low-flow sampling, and a copy of the low-flow sampling log is included in **Appendix E**.
- The metals analysis was completed following EPA Method 6020B instead of the originally proposed EPA Method 6010D. The subcontracted laboratory confirmed that both analytical methods were the same cost and that EPA Method 6020B would offer lower detection limits.

3.8 IDW Management

Used PPE (e.g., disposable gloves), disposable equipment (e.g., plastic baggies), and disposable sampling materials were containerized in 55-gallon drums. Additionally, all drilling fluids, purged or recovered groundwater, and solids generated during the monitoring well installation were containerized in bulk storage containers (i.e., roll-off, polyethylene holding tanks). All containers were properly labeled with the type of waste and date of accumulation, sealed and temporarily staged in the controlled work zone to minimize risk of contact by the general public until each waste stream could be characterized and transported off-site for proper disposal.

4 Summary of Pre-Design Data Gap Groundwater and Surface Water Investigation Analytical Results

This section presents the results for groundwater level monitoring and groundwater and surface water sample analyses that were conducted as part of the groundwater and surface water Pre-Design Data Gap Investigation sampling activities described above.

Groundwater level measurements were collected from the entire accessible monitoring network. These data are presented in **Table 1** and the results discussed in more detail in **Section 4.1**.

Groundwater analytical results were compared to relevant water quality criteria and are presented in **Tables 2A (VOCs), 2B (PFAS), and 2C (Inorganics)**. Surface water analytical results were compared to relevant surface water quality criteria and are presented in **Tables 3A (VOCs), 3B (PFAS), and 3C (Inorganics)**. Please note that the attached groundwater and surface water analytical tables only represent Site COCs; however, comprehensive tables showing all analyzed parameters for both media are included in **Appendix F**. More specifically, the groundwater analytical results were compared to the PA Act 2 Medium Specific Concentrations (MSC) for a Residential, Used Aquifer. The surface water laboratory analytical data were compared to PA Chapter 93 Criteria, with the exception of the PFAS analytical results, which were compared to the Environmental Protection Agency (EPA) Ambient Water Quality Criteria (AWQC) for Human Health and Aquatic Life. Note that the EPA AWQC are not ‘applicable’ as they have not been adopted and were only utilized as relevant criteria for the evaluation of the analytical data. When applicable Chapter 93 or EPA AWQC were not available for a particular compound, the surface water laboratory analytical result was compared to the PA Act 2 MSCs for a Residential, Used Aquifer. Findings, which may be drawn from the review of data from the comprehensive synchronous monitoring network sampling event are summarized in **Section 4.2 (Groundwater)** and **Section 4.3 (Surface Water)**.

Additionally, the results of quality control sampling and analysis that was conducted during these activities are presented in **Section 4.4**.

Laboratory analytical reports and chain-of-custody documentation are included in **Appendix G**.

4.1 Groundwater Level Monitoring

Between May 19 and May 29, 2026, GES completed liquid-level gauging activities of the entire accessible monitoring well network. The full monitoring well network included the newly installed nested well set (MW-85), 57 overburden wells, 43 shallow bedrock wells, 17 intermediate bedrock wells, and 23 deep bedrock monitoring wells. As mentioned previously (see **Section 3.7**), 19 monitoring wells of the previously listed wells were determined to be abandoned, destroyed, unable to be located, or inaccessible due to safety concerns and could not be gauged. The gauging data were recorded on field gauging sheets included in **Appendix F**.

Liquid-level data were then organized into four different depth zones (i.e., overburden, shallow bedrock, intermediate bedrock, and deep bedrock) and measurements were converted to groundwater elevations for each monitoring point based upon previously available survey information. The groundwater monitoring zones were established during previous investigations at the Site as follows: overburden zone (depth above top of rock); shallow bedrock zone (between top of rock and 120 feet bgs); intermediate bedrock zone (between 120-222 feet bgs); and deep bedrock (>222 feet bgs). Calculated groundwater elevations for each monitoring location organized by monitoring zone are presented in **Table 1**.

The groundwater elevation data were used to prepare groundwater elevation contour maps for the four monitoring zones: **Figure 5** presents groundwater elevation contours for the overburden zone; **Figure 6** presents groundwater elevation contours for the shallow bedrock zone; **Figure 7** presents groundwater elevation contours for the intermediate bedrock zone; and **Figure 8** presents groundwater elevation contours for the deep bedrock zone.

Based on these maps, the groundwater gradients and flow directions in the four monitoring zones are as follows:

- Overburden – 0.036 ft/ft to the north
- Shallow Bedrock – 0.036 ft/ft to the north
- Intermediate Bedrock – Generally 0.028 ft/ft to the northeast
- Deep Bedrock – Generally 0.032 ft/ft to the northeast, with a significant groundwater low on the north side of Lancaster Avenue

Groundwater flow directions and gradients for this monitoring event are consistent with previous observations. Water-table conditions generally exist in both the overburden and bedrock zones. Regularly spaced contours with no outlier conditions are observed in the overburden and shallow bedrock zones.

Some localized mounding and sinking are evident in the intermediate and deep bedrock monitoring zones. Fracture density in the rock is known to decrease with depth; consequently, fractures are more frequent and better interconnected in the shallow bedrock zone and become less frequent and less interconnected at greater depths. Groundwater elevation contours exhibiting localized mounding or sinking conditions are not uncommon in similar geologic conditions as observed in these deeper zones. Overall, elevation contours in the intermediate and deep bedrock zones remain consistent, at the larger scale, with conditions in the overburden and shallow groundwater.

Previous investigations omitted wells exhibiting localized anomalies from their contour maps. For example, deep bedrock monitoring well MW-43C consistently exhibits low groundwater elevations relative to surrounding locations, with recorded water levels of 133.66 ft above mean sea level (amsl) in 2010, dry in 2011, 96.95 ft amsl in 2012, 97.94 ft amsl in 2014, and 157.00 ft amsl in May 2026. Recontouring the May 2026 deep bedrock zone groundwater elevations without MW-43C (**Figure 9**) yields groundwater elevation contour patterns consistent with overlying zones, supporting the conclusion that the Site aquifer system generally behaves as a single unconfined aquifer. While regional groundwater flow and COC migration remain consistently toward the northeast, the localized mounds and sinks in the bedrock will govern the precise spatial distribution and geometry of COCs near these wells.

4.2 Groundwater Quality

A comparison of the laboratory analytical results to the applicable PA Act 2 Residential, Used Aquifer MSCs for the groundwater data gap pre-design investigation samples was conducted. Maps displaying the comparisons of groundwater concentrations for TCE, PFOA, fluoride,

chromium, manganese, nickel, and Cr(VI) in each groundwater zone to the PA Act 2 Residential, Used Aquifer MSCs were prepared to illustrate the spatial distributions of impacts in the aquifer at the Site. TCE was selected because it is the primary VOC COC at the Site, PFOA was selected because it was the most widespread PFAS compound detected in groundwater, and fluoride was selected based on the previously identified data gaps in groundwater characterization for this COC. The metals were selected to display their distribution on and off the Source Property. The data are presented as follows:

- The extent of TCE impacts in the overburden, shallow bedrock, intermediate bedrock, and deep bedrock monitoring zones are presented in **Figures 10, 11, 12, and 13**, respectively.
- The extent of PFOA impacts in the overburden, shallow bedrock, intermediate bedrock, and deep bedrock monitoring zones are presented in **Figures 14, 15, 16, and 17**, respectively.
- The extent of fluoride impacts in the overburden, shallow bedrock, intermediate bedrock, and deep bedrock monitoring zones is presented in **Figures 18, 19, 20, and 21**, respectively.
- The extent of chromium impacts in the overburden, shallow bedrock, intermediate bedrock, and deep bedrock monitoring zones is presented in **Figures 22, 23, 24, and 25**, respectively.
- The extent of manganese impacts in the overburden, shallow bedrock, intermediate bedrock, and deep bedrock monitoring zones is presented in **Figures 26, 27, 28, and 29**, respectively.
- The extent of nickel impacts in the overburden, shallow bedrock, intermediate bedrock, and deep bedrock monitoring zones is presented in **Figures 30, 31, 32, and 33**, respectively.
- The extent of Cr(VI) impacts in the overburden, shallow bedrock, intermediate bedrock, and deep bedrock monitoring zones is presented in **Figures 34, 35, 36, and 37**, respectively.
- A map presenting the combined maximum extent of the TCE exceedances of the relevant PA Act 2 Residential, Used Aquifer MSCs in groundwater for all monitoring zones was prepared and is included as **Figure 38**.

Observations made from these comparisons include the following.

- Chlorinated solvents, which were previously identified as Site COCs, were detected at concentrations comparable to historical levels in previously sampled locations. However, elevated TCE concentrations at the newly added pre-design MW-85 nested well set indicate the continued existence of a data gap in the northeastern portion of the Source Property that warrants additional investigation (e.g., TCE was detected at 28,000 µg/L in newly installed shallow bedrock well MW-85A).
 - o Overburden groundwater in this northeastern Source Property area exhibited low to trace TCE concentrations, including SMP-3 (3.7 µg/L), SMP-4 (2.5 µg/L), and SMP-5 (0.78 µg/L) (**Figure 10**).

- o In contrast, shallow and intermediate bedrock exhibit significantly elevated TCE concentrations in this northeastern Source Property area, with MW-85A at 28,000 µg/L and MW-85B at 2,200 µg/L, respectively (**Figures 11 and 12**).
- o Overall, TCE mass distribution generally increases with depth toward the northeast; however, observations at the MW-85 set demonstrate a localized eastward component of TCE movement within the bedrock (**Figures 10-13**).
- o The spatial distribution of the TCE plume within the bedrock zones on the northeastern Source Property area, combined with coincidental groundwater mounding and sinking observed in groundwater elevation contours in the intermediate and deep bedrock zones across this area and Western Village Way (**Figures 7 and 8**), suggests these hydrogeologic features influence localized COC distribution in this area of the Site and require further evaluation.
- o The spatial distribution along the northern extent of the TCE plume in the shallow bedrock zone is not fully delineated. It was previously thought that Valley Creek would be the discharge point and maintain control along the northern length of the plume. This investigation showed that TCE impacts in shallow bedrock may be migrating underneath and beyond the stream; therefore, additional delineation/VI evaluation is recommended in this area (see **Figure 38**).
- PFAS compounds, including perfluorooctanoic acid (PFOA), perfluorononanoic acid (PFNA), and perfluorooctanesulfonic acid (PFOS), were detected at concentrations above the applicable PA Act 2 Residential, Used Aquifer MSCs. Note, the highest concentration of PFOS was detected in MW-33 located off the Source property at a concentration of 660 ng/L (**Figures 14-17 and Table 3B**).
- Fluoride was detected at concentrations above the PA Act 2 Residential, Used Aquifer MSCs in 15 of the 62 monitoring wells sampled for the compound. The fluoride concentrations detected above the PA Act 2 Residential, Used Aquifer MSC were concentrated on the Source Property in all zones.
- Other metals, including chromium (5 locations), manganese (16 locations), and nickel (2 locations) were detected at concentrations above the PA Act 2 Residential, Used Aquifer MSCs. The metals concentrations detected above the PA Act 2 Residential, Used Aquifer MSCs were concentrated on the Source Property.
 - o Chromium exceeded in samples collected from the overburden (MW-65, SMP-3, SMP-4, and SMP-5) and intermediate bedrock (MW-85B) zones on the Source Property. Note that detections above the PA Act 2 Residential, Used Aquifer MSC are concentrated along the northeastern plume.
 - o Manganese had exceedances in overburden, shallow bedrock, and intermediate bedrock zones.
 - o Nickel exceeded in samples collected from the overburden (SMP-4) and shallow bedrock (MW-22) zones.
 - o Cr(VI) does not have a PA Act 2 Residential, Used Aquifer MSC; however, when the concentrations are compared against the Total Chromium PA Act 2 MSC for a Residential, Used Aquifer, there are exceedances in the overburden, shallow bedrock, and intermediate bedrock zones.

From **Figures 10-13**, the following was observed from each zone:

- The highest TCE concentrations are observed to persist in the overburden groundwater monitoring zone in proximity to the former vapor degreaser in Building 8 and extend off of the Source Property to the northeast across Lancaster Avenue;
- The highest TCE concentrations are observed to persist in the shallow bedrock monitoring zone in the eastern portion of the Source Property at the newly installed monitoring well MW-85A location at a concentration of 28,000 µg/L and extend off of the Source Property to the northeast across Lancaster Avenue and Conestoga Road;
- The highest TCE concentrations are observed to persist in the intermediate groundwater monitoring zone just off of the Source Property to the northeast and extend across Lancaster Avenue;
- The highest TCE concentrations are observed to persist in the deep bedrock monitoring zone in the northern portion of the Source Property, where the highest concentrations of Site VOC COCs in any zone were detected (i.e., highest detections of TCE in MW-26C, MW-75A, MW-75B, and MW-78C) and extend off of the Source Property to the northeast across Lancaster Avenue toward Conestoga Road.

Figures 14-17 show a potential source area of PFOA in proximity to the former vapor degreaser area in Building 8 (**Figure 14**) and movement of the center of mass of this COC in the shallow, intermediate, and deep bedrock zones (**Figures 15-17**, respectively) is consistent with the TCE plume. Currently, no monitoring wells are present directly upgradient of the known VOC source area in Building 8.

Figures 18-21 show that the highest concentrations and exceedances of fluoride were detected in the overburden zone and stream monitoring points (SMPs) along the east side of Little Valley Creek, and in the shallow bedrock zone in proximity to the former cesspool area located south of Building 5.

Figures 22-25 show that the highest concentrations and exceedances of the PA Act 2 Residential, Used Aquifer MSC for dissolved total chromium were detected in the overburden zone (SMP-3 through SMP-5 and MW-65) and in the intermediate bedrock zone (MW-85B) along the east side of Little Valley Creek.

Figures 26-29 show that the highest concentrations and exceedances of the PA Act 2 Residential, Used Aquifer MSC for dissolved manganese were detected in the overburden, shallow bedrock, and intermediate bedrock zones in proximity to the former vapor degreaser area in the western portion of Building 8; in the parking area east of Building 8; and to the north of the Source Property across the railroad tracks.

Figures 30-33 show that the highest concentrations and exceedances of the PA Act 2 Residential, Used Aquifer MSC for dissolved nickel were detected in the overburden zone in SMP-4 along the east side of Little Valley Creek, and in the shallow bedrock zone in proximity to the former drum storage area (MW-22) located south of Building 8.

Figures 34-37 show that the highest concentrations for dissolved Cr(VI) were detected in the overburden zone (SMP-3 through SMP-5, and MW-65), in the shallow bedrock zone (MW-22), and in the intermediate bedrock zone (MW-85B) along the east side of Little Valley Creek.

4.3 Surface Water Quality

A comparison of the laboratory analytical results to the applicable Chapter 93 criteria or relevant EPA AWQC criteria, or PA Act 2 MSCs (when no applicable or relevant criteria were available) for the surface water data gap pre-design investigation samples showed the following:

- TCE was detected in surface water at concentrations above the Chapter 93 Surface Water Criteria for Human Health in four (4) locations: SW-3, SW-4, SW-5, and SW-6. Surface Water sample locations can be found on **Figure 39**.
- 1,2,4-Trichlorobenzene was detected in surface water at concentrations above the Chapter 93 Surface Water Criteria for Human Health in one (1) location: SW-3.
- Four (4) additional Site COCs, including benzene, carbon tetrachloride, 1,1,2-trichloroethane, and vinyl chloride, were reported at non-detectable levels in the various surface water sampling locations but had laboratory reporting limits (RLs) exceeding the applicable surface water criteria.
- PFAS compounds, including perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were detected in surface water at concentrations above the relevant EPA AWQC in all sampled locations (SW-1 and SW-3 through SW-10).
- Fluoride was not detected in surface water at concentrations above the applicable Chapter 93, Table 3: Specific Surface Water Quality Criteria.
- Cr(VI) was detected in surface water in samples from eight (8) sampling locations (SW-3 through SW-10) at concentrations above the Chapter 93 Surface Water Quality Fish and Aquatic Life Criteria for Continuous Concentrations. Note that this specific criterion was selected as a conservative, relevant criteria for comparison purposes; however, this criterion is typically only applicable to multiple rounds of sampling.

As part of the data evaluation, several steps were necessary to determine and/or calculate applicable or relevant surface water criteria for select parameters:

- Dissolved nickel was detected in samples collected from all locations (SW-1 through SW-10). Surface water criteria for nickel is calculated using a hardness (H)-based equation. As such, the following was subsequently requested and provided by ELLE:
 - o Calculated Total Hardness (SM 2340B-2011) as Calcium Carbonate (CaCO_3) for all surface water samples using the Calcium and Magnesium analytical data for each location.

- The following Surface Water Criteria were then calculated for Nickel:
 - o Chapter 93 Surface Water Quality Fish and Aquatic Life Criteria - Continuous Concentrations (CCC) using the following equation:
$$CCC = 0.997 \times \text{Exp}(0.846 \times \ln[H] + 0.0584)$$
 - o Chapter 93 Surface Water Quality Fish and Aquatic Life Criteria - Maximum Concentrations (CMC) using the following equation:
$$CMC = 0.998 \times \text{Exp}(0.846 \times \ln[H] + 2.255)$$
 - o Where $\ln[H]$ is the Natural Logarithm of the Hardness of the stream as CaCO_3 .
 - o Using the lowest Total Hardness value of 88 mg/L, lower and more conservative standards were then calculated for nickel, resulting in the following:
 - CCC = 0.047 mg/L
 - CMC = 0.420 mg/L
- The nickel concentrations in the surface water samples were then compared to all relevant criteria and determined to be below the most stringent standard of 0.047 mg/L.

4.4 Quality Assurance/Quality Control

QA/QC samples were collected as discussed in **Section 3**. A summary of the QA/QC sample data evaluation is provided below.

Groundwater - VOCs

- 2-Butanone, acetone, chloroform, and methylene chloride were detected at concentrations below the PA Act 2 MSCs for a Residential, Used aquifer in the aqueous Field Blank QA/QC samples.
- Acetone was also detected at concentrations below the PA Act 2 MSCs for a Residential, Used aquifer in one aqueous Trip Blank QA/QC sample.
- 1,1,2,2-Tetrachloroethane, 1,2-dibromo-3-chloropropane (DBCP) and 1,2-dibromoethane were not detected at concentrations above the laboratory RL; however, the laboratory RLs exceeded the PA Act 2 MSCs for a Residential, Used aquifer in all the aqueous QA/QC samples.

Groundwater - PFAS

- PFOS was detected at a concentration above the PA Act 2 MSC for a Residential, Used aquifer in the aqueous Field Blank QA/QC sample collected on June 5, 2026.

Groundwater - Fluoride

- Fluoride was not detected at concentrations above the laboratory RL in the aqueous QA/QC samples.

Groundwater - Metals

- Manganese was detected at a concentration below the PA Act 2 MSC for a Residential, Used aquifer in one aqueous Field Blank QA/QC sample.

Surface Water - VOCs

- 1,1,2-Trichloroethane, 1,1,2,2-tetrachloroethane, 1,2-dichloropropane, 1,2,4-trichlorobenzene, 1,3-dichloropropene, benzene, carbon disulfide, carbon tetrachloride, chlorodibromomethane, TCE, and vinyl chloride were not detected at concentrations above the laboratory RL; however, the laboratory RLs exceeded applicable or relevant surface water criteria in the one (1) aqueous Field Blank and Trip Blank QA/QC sample.

Surface Water - PFAS

- PFOA and PFOS were detected at a concentration above the relevant surface water criteria in the one (1) aqueous Field Blank QA/QC sample.

Surface Water - Fluoride

- Fluoride was not detected at concentrations above the laboratory RL in the one (1) aqueous Field Blank QA/QC sample.

Surface Water - Inorganics

- None of the analyzed compounds were detected at concentrations above the laboratory RL in the one (1) aqueous Field Blank QA/QC sample. Note that the Cr(VI) samples submitted for laboratory analysis were received at the laboratory at a low pH (9.1). The field preservation/buffering was completed to ensure the samples did not exceed the maximum pH range (9.3-9.7). Therefore, the laboratory completed buffering of the samples to within the method range. Only surface water samples SW-3, SW-6, and Field Blank SW could not be adjusted to within range at the laboratory.

Based on the summarized QA/QC results above, the PFOS detection (9.4 ng/L) above the PA Act 2 MSC for a Residential, Used Aquifer in Field Blank #6 collected on June 5, 2026, compromises the data from other PFAS samples collected on that date. It is recommended that recollection of confirmatory PFAS samples from select monitoring wells (MW-13, MW-30CR, MW-85A, MW-85B, PZ-1, PZ-6, PZ-7, and PZ-9) be completed. Additionally, future Cr(VI) samples should be either correctly field preserved/buffered, or laboratory filtering/buffering requested. Finally, due to the laboratory RLs for select VOC parameters exceeding the PA Act 2 MSCs for a Residential, Used Aquifer adding uncertainty to the data results, alternative analytical methods should be considered for future sampling events (e.g., a low-level concentration (or Selected Ion Monitoring [SIM]) method). This will allow further evaluation of potential groundwater influence on surface water at the Site. A summary of all qualifiers and laboratory case narrative documentation is included in the laboratory analytical reports included in **Appendix G**.

5 Investigation Derived Waste Disposal

Upon completion of site characterization activities, solid and liquid samples were collected for the appropriate analyses in accordance with the recommended disposal facility's requirements and any applicable municipal or regulatory agency requirements to determine waste disposition.

The waste classification samples were submitted to ELLE for analysis to determine appropriate waste classification and handling requirements. All waste classification and handling activities were conducted in accordance with relevant hazardous and residual waste regulations, including the requirements of 25 Pa. Code, Articles VII, Chapters 260a through 270a and 25 Pa. Code, Article IX, Chapter 287. ELLE is accredited by the Pennsylvania Bureau of Laboratories, Laboratory Accreditation Program (LAP), for all analytical parameters, methods, and technologies used per 25 Pa. Code, Chapter 252 under the National Environmental Laboratory Accreditation Program (NELAP).

Based on the waste classification analytical results, the bidding waste contractors indicated that the waste would meet non-hazardous classification requirements. A copy of the waste classification analytical data report is included in **Appendix H**. Pending approval of the recommended subcontractor and disposal facility, the waste will be removed from the Site and properly disposed.

6 Conclusions

The following conclusions can be drawn based on review of the groundwater and surface water data gap pre-design investigation analytical results:

- Chlorinated solvents, which were previously identified as Site COCs, were detected at concentrations above the PA Act 2 Residential, Used Aquifer MSC in newly installed monitoring wells MW-85A and MW-85B. These exceedances of the relevant standards indicate that the shallow and intermediate bedrock zones are impacted on the east side of Little Valley Creek in closer proximity to the residential homes on the west end of Village Way than had been originally identified.
- PFOA and PFOS were detected at concentrations above the PA Act 2 Residential, Used Aquifer MSCs in groundwater samples during the data gap pre-design investigation. The highest concentrations of PFOA were detected in overburden groundwater in proximity to the former vapor degreaser in Building 8.
- PFOA and PFOS were detected at concentrations above the relevant surface water screening value in all sampling locations (SW-1 and SW-3 through SW-10).
- Cr(VI) was detected at concentrations above the applicable surface water criteria in all sampling locations (SW-3 through SW-10) except SW-1 (the most upstream location).
- Groundwater elevations and related flow directions and gradients are consistent with previous investigations. However, localized mounding and sinks observed in the intermediate and deep bedrock groundwater monitoring zones may affect localized flow dynamics in the vicinity of the east side of Little Valley Creek and in closer

proximity to the residential homes on the west end of Village Way. These localized flow dynamics may be affecting the spatial distribution of the TCE plume within the bedrock zones on the northeastern Source Property area and in the vicinity of western Village Way.

7 Recommendations

Based on the conclusions listed above, the following activities are recommended:

- Sampling of monitoring wells that could not be accessed or located during this round of sampling, including monitoring wells located inside Building 5 (i.e., MW-23, MW-66), should be attempted again.
- During any future groundwater sampling of the full monitoring well network and surface water sampling for VOC analysis, all samples where high concentrations of VOCs are not expected should be run at a low-level concentration (or Selected Ion Monitoring [SIM]) method to attain necessary reporting limits (i.e., 1,2-dichloroethane).
- Additional investigation to the east of the Source Property, including:
 - o Implementation of a supplemental vapor intrusion (VI) assessment in the vicinity of MW-85 including an evaluation of potential preferential vapor migration pathways.
 - o Installation and sampling of additional monitoring wells to the southeast and east-southeast of MW-85 to further define the extent of impacts in the overburden and shallow bedrock zones in this area of the Site.
- Additional investigation along the northern edge of the approximate TCE plume boundary, including:
 - o Implementation of a supplemental vapor intrusion (VI) evaluation, including an evaluation of potential preferential vapor migration pathways.
 - o Potential installation and sampling of an additional monitoring well within the current approximate extent of the TCE plume and where the approximate plume intersects Conestoga Road to further define the extent of impacts in the shallow bedrock zones in this area of the Site.
- Additional delineation of the PFAS overburden groundwater plume to the west and south of the former vapor degreaser area in Building 8 to evaluate potential contributions from off-property sources in addition to the impacts identified to be correlated to the former vapor degreaser in Building 8.
- Based on the exceedance for PFOS in the Field Blank collected on June 5, 2026, it is recommended that collection of confirmatory PFAS samples from select monitoring wells (MW-13, MW-30CR, MW-85A, MW-85B, PZ-1, PZ-6, PZ-7, and PZ-9) be completed.

- Based on the widespread detections and exceedances of select PFAS compounds at the Site, a plume-wide PFAS evaluation is recommended to determine the concentrations of various compounds spatially across the plume. This information will be utilized to determine potential off-site sources and/or additional source areas.
- Based on the observation of localized groundwater mounding and sinks in the intermediate and deep bedrock zones and the potential for large fluctuations in groundwater levels in these areas due to the effects of fracture flow, long-duration water level transducer monitoring is recommended in monitoring wells MW-43C, MW-57B, MW-85B, and other, to be determined, surrounding monitoring wells, to better understand the localized flow dynamics between the groundwater monitoring zones in these areas.

Notes:
DEP: Pennsylvania Department of Environmental Protection
SHS: Statewide Health Standard
ng/L: nanograms per liter
NS: No standard
NA: Not Analyzed
RL: Reporting Limit
ND: Indicates analysis was performed for the test but it was not detected. The sampling reporting limit is reported.
J: Result is less than the reporting limit but greater than or equal to the method detection limit and the concentration is an approximate value
H: Sample was prepped or analyzed beyond the specified holding time. This does not meet regulatory requirements.
B : Analyte was found in the blank.
Bolded results indicate a detection
Indicates concentrations exceed the applicable DEP Act 2 Standard.
DEP Act 2 Standards were converted to ng/L from µg/L due to laboratory reporting all data in ng/L
HFPO-DA is the ionic compound of the Hexafluoropropylene Oxide Dimer Acid (Gen-X) Ammonium Salt and shares the same proposed MSC.
PFBS is the ionic compound of the potassium perfluorobutane sulfonate salt and shares the same proposed MSC.
K+PFBS and HFPO-DA not analyzed under EPA 1633A. These compounds are reported as acid or anion species per the analytical method

Table 2C – Groundwater Analytical Data Summary: Inorganics

Notes:
DEP: Pennsylvania Department of Environmental Protection
SHS: Statewide Health Standard
mg/L: milligrams per liter
NS: No standard
RL: Reporting Limit
ND: Indicates analysis was performed for the test but it was not detected. The sample reproting limit is reported.
J: Result is less than the reporting limit but greater than or equal to the method detection limit and the concentration is an approximate value
Indicates laboratory method detection limits exceed the applicable DEP Act 2 Standard.
Indicates concentrations exceed the applicable DEP Act 2 Standard.
Bolded results indicate a detection
DEP Act 2 Standards were converted to mg/L from µg/L due to laboratory reporting all data in mg/L
Table 2c and Appendix Table 2c report the same analytes, and have been included in both locations for consistency.

Appendix B – Downhole Geophysical Report

AGS Lead Number	12709
Company	GES
Report Created	03 / 27 / 2026
Geophysicist	Corey Miller, M.S., P.G.
Email	corey@advancedgeo.com
Date Completed	20 March 2026
Project Name	GES Bishop Tube HSCA Site – GTAC 8-1-472 East Whiteland Township, PA Borehole
Project Address	1 S Malin Rd, Malvern, PA 19355
Enclosed	Annotated & Interpreted Geophysical Logs (PDF)

Project Objectives

The primary objectives of this investigation were to characterize the depth and three-dimensional orientation of planar bedrock features (e.g., fractures and joints), to identify potential water-bearing zones, and to assess the lithologic and other physical properties of the formations intersected by the well. The borehole geophysical data will meet these objectives by delineating the depth and vertical extent of individual fractures and fracture zones, defining their dip and azimuth, and clarifying their relationships to the local geologic setting and physical properties of respective formations.

Borehole Geophysical Methods

To meet the objectives of this investigation, Advanced Geophysical Services (AGS) deployed five instruments: (1) a three-arm caliper, which provides a continuous log of borehole diameter; (2) a combined fluid resistivity (FRES), fluid temperature (Temp), and gamma ray (Gamma) tool, which characterizes potential groundwater flow and lithologic properties within the well; (3) an optical televiewer (OTV), which generates a detailed 360-degree visual image of the borehole wall, enabling analysis of fractures, joints, bedding planes, and formation color variations; (4) an acoustic televiewer (ATV), which produces a high-resolution 360-degree relative acoustic amplitude image of the borehole wall for structural interpretation of fractures, joints, and bedding planes; and (5) a heat-pulse flowmeter (HPFM), which measures potential vertical flow conditions within the well and is commonly used to identify water-producing and water-receiving zones.

Instrument & Log Descriptions

Caliper Log

The caliper log records the relative changes in borehole diameter as the tool is raised through the well (typically beginning at its deepest point). Variations in borehole size can indicate the presence of fractures, changes in lithology, or the overall condition of the borehole walls. Fractured zones often consist of openings in weathered or semi-consolidated rock, which may become loosened or partially collapse during drilling. As a result, these zones typically manifest as increases in borehole diameter on the caliper log.

Fluid Resistivity Logs

The fluid resistivity log provides continuous measurements of the electrical resistivity of the borehole water column as the tool is run through the well. Because the measurement has minimal depth of penetration, formation influences are negligible. Variations in fluid resistivity are useful for identifying zones of vertical flow, as well as intervals where the well is gaining or losing water. When water enters the borehole through a fracture, its resistivity may differ from that of the existing borehole fluid, producing a distinct change in the fluid-resistivity profile.

Temperature Log

The temperature log records variations in water (and air) temperature with depth within the well, measuring the ambient temperature at intervals of 0.1 feet. Temperature anomalies can indicate the presence of formation fluids entering the well through fractures or porous media. In particular, changes in the slope of the temperature profile may signify zones where formation water is flowing into the borehole.

Gamma Ray Log

The natural gamma ray (NGR) probe is a passive instrument that measures the intensity of naturally occurring gamma radiation emitted from rock and sediment as the tool is lowered through the borehole typically recorded in counts per second (cps). The primary purpose of the gamma ray log is to provide lithologic characterization within the well. Potassium, present in feldspars and micas (approximately 0.012% potassium-40), is a key contributor to gamma radiation and commonly weathers to form clay minerals. Clays further concentrate naturally occurring radioactive elements through ion exchange and adsorption, resulting in elevated gamma ray counts. Shales, with their high clay content, similarly produce strong gamma responses. In contrast, rocks such as limestones and sandstones, which contain low levels of radioactive elements, exhibit correspondingly low gamma ray counts.

Optical Televiewer Log

AGS employed an Optical Televiewer (OTV) probe, which captures a continuous 360-degree optical image of the borehole wall. The resulting imagery is typically displayed in an unwrapped format, providing a complete view of the internal borehole surface. Planar fractures intersecting the borehole manifest as sinusoidal features on the unwrapped image; these sinusoids can be modeled to accurately determine the fracture's azimuth and dip. The OTV log offers high-resolution fracture characterization and a detailed depiction of formation features. Additionally, the optical imagery preserves formation color, aiding in the identification of rock type, lithologic characteristics, and overall borehole conditions. All OTV data are referenced to magnetic north.

Acoustic Televiewer Log

The acoustic televiewer (ATV) log produces an oriented, high-resolution image of the borehole wall using high-frequency acoustic pulses. The resulting dataset is presented in both amplitude and travel-time formats, enabling detailed characterization of features such as fractures, lithologic contacts, and voids. The ATV acquires 256 radial measurements at intervals of 0.02 feet along the borehole, generating a fully digitized and orientation-corrected image that accounts for borehole deviation and tool rotation. This processing allows for accurate determination of fracture dip and azimuth, as well as the orientation of other structural features.

Heat Pulse Flowmeter Log

The heat-pulse flowmeter measures vertical flow rates within a borehole, allowing identification of contributing fracture zones under both natural and pumping conditions. The tool operates by heating a wire grid situated between two thermistors; the heated water is displaced toward one of the thermistors in response to the vertical component of flow within the well. Positive and negative values on the log correspond to upward and downward flow, respectively. Flow rates are calibrated in gallons per minute (GPM), and the heat-pulse flowmeter used in this investigation is capable of detecting vertical flow rates ranging from 0.03 to 1.0 GPM.

In formations with strong interconnectivity between bedding planes or fractures, minimal or no head differences and little to no flow between fractures would be expected. Conversely, in confined rock aquifers, upward or downward flow may occur within the well between discrete confined fractures. Under pumping conditions, heat-pulse flowmeter (HPFM) logs can provide valuable information on the relative interconnectivity of bedding planes and fracture zones. All instrument responses were integrated and cross-correlated for the final interpretation. The collection of numerous physical measurements within the wells significantly enhanced the confidence in the interpretations and minimized potential ambiguities that could arise from relying on a limited dataset.

Logging Procedures

The downhole logging procedures at the site followed standard industry protocols. The instrument was first attached to the cable head of a 4-conductor wireline, and the “zero” depth was set at the designated reference point (ground surface or top of casing). Logging was initiated, and the probe was lowered through the well at a rate of approximately 3 to 12 feet per minute until reaching total depth, at which point recording was stopped. Up-log measurements were then collected to verify the accuracy and reproducibility of the geophysical responses, ensuring close agreement in depth with the down-log. Because of its mechanical design, the caliper instrument was only capable of collecting up-log data.

Well Construction

The well construction data for each well is presented in Table 1 below. AGS used ground level as the reference point for all logs. The well was constructed of 6” inner diameter (ID) steel casing.

Well Parameter	MW-18
Casing Size	6" ID
Cased Depth	55.3'
Water Level	5.25'
Total Depth	239.4'
Stickup	5.5"

Geologic Setting

MW-18 at the Bishop Tube site is located nearby a contact between the Conestoga Fm. and the Octoraro Fm. The Conestoga Fm. is comprised primarily of thinly bedded blue limestone, primarily gray to blue, interbedded with thin graphitic slate. The Octoraro Fm. is part of the larger Wissahickon Fm. In this case, the Octoraro is comprised of Wissahickon mica schist, younger in age than Wissahickon gneiss. Cores from MW-18 left at the Bishop Tube site were limestone, characterized to match descriptions of the Conestoga Fm., and were found to contain well-formed pyrite inclusions throughout.

Results Summary

The geophysical well logs collected in MW-18 are presented at the conclusion of this report, with all depths referenced to ground level. The data have been organized into six tracks on the figures: Track 1 displays caliper logs; Track 2 shows depth; Track 3 presents the temperature, fluid resistivity, and HPFM data; Track 4 contains the acoustic televiewer (ATV) image; Track 5 is a tadpole plot; Track 6 displays the optical televiewer (OTV) image, and Track 7 depicts the acoustic logs. Four plots are included with this report: (1) a 20-foot scale plot highlighting detailed features observed in the OTV and ATV images; (2) a 100-foot scale plot emphasizing larger-scale features evident in the gamma ray, temperature, and fluid resistivity logs; and (3) a Wulff polar projection plot illustrating the dip and azimuth of structural features such as major open fractures/joints, minor open fractures/joints, bedding/banding/foliation, and filled fractures/joints.

The results are presented in three formats: (a) a table listing depth, azimuth, dip, and feature type (e.g., fracture or bedding plane) for fractures dipping less than 80 degrees; (b) a table showing depth range, azimuth, and type for near-vertical fractures; and (c) a bulleted text summary highlighting the most significant features and notable aspects of the data.

The data from MW-18 indicated the numerous and notable borehole features and measured physical characteristics as described below:

- The most prominent feature observed in MW-18 was a large, sub-vertical fracture located at 59' to 64', along with a west-dipping horizontal fracture located at 65'. These features corresponded with a small change in fluid resistivity, fluid conductivity, and temperature.
- MW-18 exhibited positive but very low flow conditions throughout the profile. All HPFM measurements were below the lower threshold of the probe.
- Overall, MW-18 showed sparse fracturing. Where fractures were present, most were in-filled, and were not expressed in the acoustic televiewer data. MW-18 appears to be highly competent.

Monitoring Well MW-18

The following data table provides a list of important borehole features that were detected in well MW-18. The information listed in the tables reflects the log data presented on the geophysical logs (attached PDFs).

Data Quality

The quality of the geophysical logs was excellent, with consistent and repeatable responses observed during quality control test runs. The data collection and interpretation methods employed in this investigation are consistent with standard practices for similar geophysical studies. Correlations between geophysical responses and probable subsurface features are informed by results from comparable surveys; however, some site-specific variations may exist.

Closing

Thank you for the opportunity to assist with this project. We look forward to working with you on future geophysical investigations.

Sincerely,

PUMPING RECORD		Miscellaneous Notes																																
Pumping Interval:	65	Interconnection with bottom zone during slug test and pump test. PRE-INFLATION and POST-INFLATION readings taken prior to slug test. PRE-PUMPING readings recorded after slug was removed and pump was lowered. Pumping zone was 31.34 prior to pulling the Redi-flo and swapping with Monsoon. Pumping zone was 24.67 when Monsoon was started again. No check valve used on the monsoon so initial recovery surge of ~2.5' due to water from the poly returning to the zone.																																
Pumping Rate:	0.5 gal/min																																	
Pumping Duration:	0:56																																	
Maximum Drawdown:	51.59																																	
Zone Volume	22	SLUG TEST SEQUENCE																																
Volume Purged	~25gal			TIME		WATER LEVEL (ft)																												
Nature of Discharge:	clear	Start		11:41		2.39																												
Recovery Time	0:56	Peak		11:41		-1.26																												
Percentage Recovery	97.85%	Recovery		11:46		2.40																												
RATE ADJUSTMENTS																																		
Pump started at 12:12 PM at 0.5gpm. Rate lowered to 0.45gpm at 12:27 PM. Due to drawdown, rate naturally slowed overtime and was set back to 0.5gpm at 12:35 PM. Redi-flo stopped at 12:39 PM and swapped with monsoon. Monsoon started at 12:46 PM at 0.5gpm. Rate increased to 1.0gpm at 1:04 PM. Dewatered and pump turned off at 1:08 PM. Pump turned on again at 1:59 PM to take samples.																																		
SUMMARY																																		
~25gal of water was purged from the zone during the 49 minute pumping interval (this accounts for the 7 minutes it took to swap pumps and resume pumping). There was a 97.76% recovery (accounting for the surge of water from the poly when the pump was turned off) of the zone during the 56 minutes it was observed.

**STRADDLE PACKER TESTING FIELD INFORMATION**

WELL:	MW-85	INTERVAL:	135	150
PROJECT:	GES - Bishop Tube	CLIENT:	GES	
PERSONNEL:	RC, DD	DATE:	4/1/2026	W.O.#: FS1604

SETTING DEPTHS		DATA COLLECTION CALIBRATION					Initial Pipe Tally:		20
Pump Location:	127.85	Configuration Filename: x							
Upper Packer - Top:	131.7	Current V = static water level (ft)					Pipes That Remain on Truck: 14		
Upper Packer - Bottom:	135	Open Air V = transducer depth (ft)							
Water Intake:	147.9								
Lower Packer - Top:	150								
Lower Packer - Bottom:	153.3								
Assembly Bottom:	155.1								
PACKER INFLATION (psi)		Additional Calibration Notes							
TOP	BOTTOM	Open Air V used from 3/31							
Minimum Required	Minimum Required								
201	208								
Actual PSI Used									
220	240								
TEST SEQUENCE		WATER LEVELS (ft)							
		Open Hole Static Water Level: 3.00							
Begin Logging	8:24								
Start Inflation	8:34								
Begin Pumping	8:51								
End Pumping	9:42								
End Logging	10:41								
PUMPING RECORD									
Pumping Interval:	135								
Pumping Rate:	0.75 gal/min								
Pumping Duration:	0:51								
Maximum Drawdown:	119.75								
Zone Volume	22								
Volume Purged	-30gal								
Nature of Discharge:	Clear								
Recovery Time	0:59								
Percentage Recovery	17.13%								
RATE ADJUSTMENTS									
SUMMARY									

Packer Dimensions	
SPREAD	15 ft
A- Top of Packer to Top of Bladder	3.85 ft
B- Length of Bladder	3.3 ft
C- Bottom of Bladder to Bottom of Packer	3.1 ft
D- Pipe Spread	5.3 ft
Length of Slotted Piece and L-Zap	4.5 ft
E- Top of Packer to Top of Bladder	2.1 ft
F- Length of Bladder	3.3 ft
H- Bottom of Bladder to Bottom of Packer	1.8 ft
Total Length of Top Packer	10.25 ft
Total Length of Bottom Packer	7.2 ft
Total Assembly Length	27.25 ft

Transducer Locations	
Top	2 (Distance Above Upper Packer Top)
Middle	8 (Distance Below Upper Packer Bottom)
Bottom	0 (If Different from Bottom of Assembly)

Important Dimensions	
Pipe Lengths	21 ft
Pipe diameter	2.00 in
Upper packer diameter	3.5 in
Lower packer diameter	3.5 in
Well diameter	6 in

Inflation Numbers	
Stretch PSI-Upper	125 PSI
Stretch PSI-Lower	125 PSI
Top Packer Inflation	201 PSI
Bottom Packer Inflation	208 PSI

Pipe Tally	
Stickup	3.2 ft
Point A	127.9 ft
Total Length of Pipe	131.0 ft
No. of Full-Length Pipes	6 pipes
Feet of Odds	5.0 ft

Pump Time	
Number of Volumes To Purge	3 Volumes
Zone Volume	22 gallons
GPM	0.75 gal/min
Run time	88 minutes

Transducer Serial Number	
Top	
Middle	
Bottom

Assembly Bottom:	155.1	Additional Calibration Notes								
PACKER INFLATION (psi)										
TOP	BOTTOM									
Minimum Required	Minimum Required									
201	208									
Actual PSI Used										
220	220	WATER LEVELS (ft)								
TEST SEQUENCE		Open Hole Static Water Level:					3.00			
Begin Logging	14:53									
Start Inflation	14:55									
Begin Pumping	x									
End Pumping	x									
End Logging	15:20									
PUMPING RECORD										
Pumping Interval:	135									
Pumping Rate:	0.5 gal/min									
Pumping Duration:	#VALUE!									
Maximum Drawdown:	#VALUE!									
Zone Volume	22									
Volume Purged	x									
Nature of Discharge:	x									
Recovery Time	#VALUE!									
Percentage Recovery	#VALUE!									
RATE ADJUSTMENTS										
SUMMARY										
This sheet includes data for the slug test ONLY. There was slight interconnection between the middle and bottom zones.										

Packer Dimensions	
SPREAD	15 ft
A- Top of Packer to Top of Bladder	3.85 ft
B- Length of Bladder	3.3 ft
C- Bottom of Bladder to Bottom of Packer	3.1 ft
D- Pipe Spread	5.3 ft
Length of Slotted Piece and L-Zap	4.5 ft
E- Top of Packer to Top of Bladder	2.1 ft
F- Length of Bladder	3.3 ft
H- Bottom of Bladder to Bottom of Packer	1.8 ft
Total Length of Top Packer	10.25 ft
Total Length of Bottom Packer	7.2 ft
Total Assembly Length	27.25 ft

Transducer Locations	
Top	2 (Distance Above Upper Packer Top)
Middle	8 (Distance Below Upper Packer Bottom)
Bottom	0 (If Different from Bottom of Assembly)

Important Dimensions	
Pipe Lengths	21 ft
Pipe diameter	2.00 in
Upper packer diameter	3.5 in
Lower packer diameter	3.5 in
Well diameter	6 in

Inflation Numbers	
Stretch PSI-Upper	125 PSI
Stretch PSI-Lower	125 PSI
Top Packer Inflation	201 PSI
Bottom Packer Inflation	208 PSI

Pipe Tally	
Stickup	3.2 ft
Point A	127.9 ft
Total Length of Pipe	131.0 ft
No. of Full-Length Pipes	6 pipes
Feet of Odds	5.0 ft

Pump Time	
Number of Volumes To Purge	3 Volumes
Zone Volume	22 gallons
GPM	0.5 gal/min
Run time	132 minutes

Transducer Serial Number	
Top	
Middle	
Bottom

Packer Dimensions	
SPREAD	15 ft
A- Top of Packer to Top of Bladder	3.85 ft
B- Length of Bladder	3.3 ft
C- Bottom of Bladder to Bottom of Packer	3.1 ft
D- Pipe Spread	5.3 ft
Length of Slotted Piece and L-Zap	4.5 ft
E- Top of Packer to Top of Bladder	2.1 ft
F- Length of Bladder	3.3 ft
H- Bottom of Bladder to Bottom of Packer	1.8 ft
Total Length of Top Packer	10.25 ft
Total Length of Bottom Packer	7.2 ft
Total Assembly Length	27.25 ft

Transducer Locations	
Top	2 (Distance Above Upper Packer Top)
Middle	8 (Distance Below Upper Packer Bottom)
Bottom	0 (If Different from Bottom of Assembly)

Important Dimensions	
Pipe Lengths	21 ft
Pipe diameter	2.00 in
Upper packer diameter	3.5 in
Lower packer diameter	3.5 in
Well diameter	6 in

Inflation Numbers	
Stretch PSI-Upper	125 PSI
Stretch PSI-Lower	125 PSI
Top Packer Inflation	232 PSI
Bottom Packer Inflation	238 PSI

Pipe Tally	
Stickup	2.2 ft
Point A	182.9 ft
Total Length of Pipe	185.0 ft
No. of Full-Length Pipes	8 pipes
Feet of Odds	17.0 ft

Pump Time	
Number of Volumes To Purge	3 Volumes
Zone Volume	22 gallons
GPM	1.0 gal/min
Run time	66 minutes

Transducer Serial Number	
Top	
Middle	
Bottom

TEST SEQUENCE		Open Hole Static Water Level:					2.10				
Begin Logging	11:55										
Start Inflation	11:56										
Begin Pumping	x										
End Pumping	x										
End Logging	12:30										
PUMPING RECORD											
Pumping Interval:	100	PRE- INFLATION		POST- INFLATION		PRE- PUMPING		PUMPING LEVEL		RECOVERY	
Pumping Rate:	x gal/min	2.41		1.53		x		x		x	
Pumping Duration:	#VALUE!	2.41		0.80		x		x		x	
Maximum Drawdown:	#VALUE!	2.44		-0.02		x		x		x	
Zone Volume	22										
Volume Purged	x										
Nature of Discharge:	x										
Recovery Time	#VALUE!										
Percentage Recovery	#VALUE!										
RATE ADJUSTMENTS											
x											
SUMMARY											
Slug test only. Recovery was observed for 26 minutes and the zone had not fully recovered in that time. GES decided no pumping or sampling was going to be done due to extremely low production.

240	250	WATER LEVELS (ft)							
TEST SEQUENCE		Open Hole Static Water Level:					2.40		
Begin Logging	13:07								
Start Inflation	13:09								
Begin Pumping	13:49								
End Pumping	14:22								
End Logging	16:13								
PUMPING RECORD									
Pumping Interval:	165	180							
Pumping Rate:	1 gal/min								
Pumping Duration:	0:33								
Maximum Drawdown:	124.83								
Zone Volume	22								
Volume Purged	~25gal								
Nature of Discharge:	Clear								
Recovery Time	1:51								
Percentage Recovery	11.00%								
Miscellaneous Notes									
POST-INFLATION numbers recorded prior to lowering the slug. Interconnection seen between middle and bottom zones while pumping. Bottom zone at 2:19 PM showed a rapid drawdown of a few feet and then leveled out. After pump was turned off at 2:22 PM, initial surge of water from the poly returned to the zone from 124' to 119'. Recovery numbers input prior to turning pump on to sample at 4:10 PM.									
SLUG TEST SEQUENCE									
		TIME		WATER LEVEL (ft)					
Start		13:26		-0.30					
Peak		13:27		-3.04					
Recovery		13:32		-0.30					
RATE ADJUSTMENTS									
Started pump at 1:48 PM at 1.0gpm. Due to drawdown overtime, rate naturally slowed to 0.35gpm at 2:20 PM. Pump turned off at 2:22 PM due to dewatering.									
SUMMARY									
~25gal of water was purged from the zone during the 33 minute pumping interval. There was an 6.67% recovery (accounting for the 5' of recovery from the water in the poly returning to the zone after turning off the pump) over the 111 minutes it was observed.									

Packer Dimensions	
SPREAD	15 ft
A- Top of Packer to Top of Bladder	3.85 ft
B- Length of Bladder	3.3 ft
C- Bottom of Bladder to Bottom of Packer	3.1 ft
D- Pipe Spread	5.3 ft
Length of Slotted Piece and L-Zap	4.5 ft
E- Top of Packer to Top of Bladder	2.1 ft
F- Length of Bladder	3.3 ft
H- Bottom of Bladder to Bottom of Packer	1.8 ft
Total Length of Top Packer	10.25 ft
Total Length of Bottom Packer	7.2 ft
Total Assembly Length	27.25 ft

Transducer Locations	
Top	2 (Distance Above Upper Packer Top)
Middle	8 (Distance Below Upper Packer Bottom)
Bottom	0 (If Different from Bottom of Assembly)

Important Dimensions	
Pipe Lengths	21 ft
Pipe diameter	2.00 in
Upper packer diameter	3.5 in
Lower packer diameter	3.5 in
Well diameter	6 in

Inflation Numbers	
Stretch PSI-Upper	125 PSI
Stretch PSI-Lower	125 PSI
Top Packer Inflation	219 PSI
Bottom Packer Inflation	225 PSI

Pipe Tally	
Stickup	4.2 ft
Point A	157.9 ft
Total Length of Pipe	162.0 ft
No. of Full-Length Pipes	7 pipes
Feet of Odds	15.0 ft

Pump Time	
Number of Volumes To Purge	3 Volumes
Zone Volume	22 gallons
GPM	1.0 gal/min
Run time	66 minutes

Transducer Serial Number	
Top	
Middle	
Bottom

Appendix D – Packer Testing Groundwater Analytical Report and Chain-of-Custody Documentation

ANALYTICAL REPORT

PREPARED FOR

Attn: Mr. Tim Uhler
Groundwater & Environmental Services Inc
410 Eagleview Boulevard
Suite 110
Exton, Pennsylvania 19341-2577

Generated 4/7/2026 4:34:03 PM

JOB DESCRIPTION

GTAC-Bishop Tube HSCA Site

JOB NUMBER

410-273812-1

Eurofins Lancaster Laboratories Environment Testing, LLC

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Authorization

Authorized for release by
Amek Carter, Project Manager
Loran.Carter@et.eurofinsus.com
(717)556-7252

Generated
4/7/2026 4:34:03 PM

Compliance Statement

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.

- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time. This does not meet regulatory requirements.
H3	Sample was received and analyzed past holding time. This does not meet regulatory requirements.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Client: Groundwater & Environmental Services Inc
Project: GTAC-Bishop Tube HSCA Site

Job ID: 410-273812-1

Job ID: 410-273812-1

Eurofins Lancaster Laboratories Environment

Job Narrative 410-273812-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt

The samples were received on 4/3/2026 2:15 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 3.2°C.

Receipt Exceptions

The Chain-of-Custody (COC) was incomplete as received. The COC is missing the Sample Type (Grab or Composite)>. This does not meet regulatory requirements.

GC/MS VOA

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Question	Answer	Comment
The cooler's custody seal is intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature acceptable, where thermal pres is required ($\leq 6^{\circ}\text{C}$, not frozen).	True	
Cooler Temperature is recorded.	True	
WV: Container Temp acceptable, where thermal pres is required ($\leq 6^{\circ}\text{C}$, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	False	Refer to Job Narrative for details.
There are no discrepancies between the containers received and the COC.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Is the Field Sampler's name present on COC?	True	
Sample custody seals are intact.	True	
VOA sample vials do not have headspace $> 6\text{mm}$ in diameter (none, if from WV)?	False	Headspace greater than 6mm in diameter in some but not all containers

Notes:
DEP: Pennsylvania Department of Environmental Protection
SHS: Statewide Health Standard
mg/L: milligrams per liter
RL: Reporting Limit
ND: Indicates analysis was performed for the test but it was not detected. The sample reproting limit is reported.
J: Result is less than the reporting limit but greater than or equal to the method detection limit and the concentration is an approximate value
Indicates laboratory method detection limits exceed the applicable DEP Act 2 Standard.
Indicates concentrations exceed the applicable DEP Act 2 Standard.
Bolded results indicate a detection
DEP Act 2 Standards were converted to mg/L from µg/L due to laboratory reporting all data in mg/L
Table 2c and Appendix Table 2c report the same analytes, and have been included in both locations for consistency.

Notes:

1. EPA Region III Freshwater Screening Benchmarks are only presented for select compounds where applicable DEP surface water criteria are not available for comparison.

2. Concentrations shown are a summation of the cis-1,3-Dichloropropene and trans-1,3-Dichloropropene results for each sample, as DEP Chapter 93 SW Standards are not available for those isomers.

DEP: Pennsylvania Department of Environmental Protection

SHS: Statewide Health Standard

µg/L: micrograms per liter

NA: Not applicable

NS: No standard

RL: Reporting Limit

ND: Indicates analysis was performed for the test but it was not detected. The sample reporting limit is reported.

J: Result is less than the reporting limit but greater than or equal to the method detection limit and the concentration is an approximate value

Applicable DEP Surface Water Standard

Relevant EPA Surface Water Standard

Indicates laboratory reporting limits exceed the applicable DEP Standard.

Indicates concentrations exceed the applicable DEP Standard.

Bolded results indicates a concentration was detected

Notes:
1. EPA Region III Freshwater Screening Benchmarks are only presented for select compounds where applicable DEP surface water criteria are not available for comparison.
2. Concentrations shown are a summation of the cis-1,3-Dichloropropene and trans-1,3-Dichloropropene results for each sample, as DEP Chapter 93 SW Standards are not available for those isomers.
DEP: Pennsylvania Department of Environmental Protection
SHS: Statewide Health Standard
µg/L: micrograms per liter
NA: Not applicable
NS: No standard
RL: Reporting Limit
ND: Indicates analysis was performed for the test but it was not detected. The sample reporting limit is reported.
J: Result is less than the reporting limit but greater than or equal to the method detection limit and the concentration is an approximate value
Applicable DEP Surface Water Standard
Relevant EPA Surface Water Standard
Indicates laboratory reporting limits exceed the applicable DEP Standard.
Indicates concentrations exceed the applicable DEP Standard.
Bolded results indicates a concentration was detected

RL: Reporting Limit

ND: Indicates analysis was performed for the test but it was not detected. The sample reporting limit is reported.

J: Result is less than the reporting limit but greater than or equal to the method detection limit and the concentration is an approximate value

Relevant Surface Water Criteria

Indicates laboratory reporting limits exceed the relevant surface water criteria.

Indicates concentrations exceed the relevant surface water criteria.

Bolded results indicates a concentration was detected

HFPO-DA is the ionic compound of the Hexafluoropropylene Oxide Dimer Acid (Gen-X) Ammonium Salt and shares the same proposed MSC.

PFBS is the ionic compound of the potassium perfluorobutane sulfonate salt and shares the same proposed MSC.

K+PFBS and HFPO-DA not analyzed under EPA 1633A. These analytes are only reported as acid/anion species in the instrumentation for these compounds.

DEP: Pennsylvania Department of Environmental Protection

SHS: Statewide Health Standard

ng/L: nanograms per liter

NS: No standard

RL: Reporting Limit

ND: Indicates analysis was performed for the test but it was not detected. The sample reporting limit is reported.

J: Result is less than the reporting limit but greater than or equal to the method detection limit and the concentration is an approximate value

Relevant Surface Water Criteria

Indicates laboratory reporting limits exceed the relevant surface water criteria.

Indicates concentrations exceed the relevant surface water criteria.

Bolded results indicates a concentration was detected

HFPO-DA is the ionic compound of the Hexafluoropropylene Oxide Dimer Acid (Gen-X) Ammonium Salt and shares the same proposed MSC.

PFBS is the ionic compound of the potassium perfluorobutane sulfonate salt and shares the same proposed MSC.

K+PFBS and HFPO-DA not analyzed under EPA 1633A. These analytes are only reported as acid/anion species in the instrumentation for these compounds.

Exton, Pennsylvania 19341-2577

Generated 8/7/2026 5:51:35 PM Revision 1

JOB DESCRIPTION

GTAC-Bishop Tube HSCA Site

JOB NUMBER

410-285561-1

Eurofins Lancaster Laboratories Environment Testing, LLC

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Authorization

Authorized for release by
Amek Carter, Project Manager
Loran.Carter@et.eurofinsus.com

Revision 1

Compliance Statement

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
^c	CCV Recovery is outside acceptance limits.
cn	Refer to Case Narrative for further detail
F2	MS/MSD RPD exceeds control limits
FH	MS and/or MSD recovery above control limits.
FL	MS and/or MSD recovery below control limits.
H	Sample was prepped or analyzed beyond the specified holding time. This does not meet regulatory requirements.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

HPLC/IC

Qualifier	Qualifier Description
FH	MS and/or MSD recovery above control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

LCMS

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
*5-	Isotope dilution analyte is outside acceptance limits, low biased.
*5+	Isotope dilution analyte is outside acceptance limits, high biased.
^c	CCV Recovery is outside acceptance limits.
cn	Refer to Case Narrative for further detail
F2	MS/MSD RPD exceeds control limits
FL	MS and/or MSD recovery below control limits.
H	Sample was prepped or analyzed beyond the specified holding time. This does not meet regulatory requirements.
I	Ion ratio outside limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)

REVISION

The report being provided is a revision of the original report sent on 6/23/2026. The report (revision 1) is being revised due to VOCs and PFAS added to sample MW-76.

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt

The samples were received on 5/28/2026 6:15 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.1°C and 5.9°C.

Receipt Exceptions

Backup volume for 1633 method was placed in the freezer upon receipt. MW-57B (410-285561-2), MW-57C (410-285561-3), MW-78A (410-285561-4), MW-78B (410-285561-5), MW-78C (410-285561-6), Field Blank #1 (410-285561-7), MW-77 (410-285561-8), MW-76 (410-285561-9) and MW-64 (410-285561-11)

One 125-mL plastic unpreserved container for the following sample was received leaking: MW-57A (410-285561-1). Lid was not secure and came off during transit. Sufficient volume remains for analysis.

GC/MS VOA

Method 8260D: The continuing calibration verification (CCV) associated with batch 410-825910 recovered outside acceptance criteria, low biased, for cis-1,2-Dichloroethene, trans-1,2-Dichloroethene and Chloroform. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Non-detections of the affected analytes are reported. Any detections are considered estimated.

Method 8260D: The continuing calibration verification (CCV) associated with batch 410-831502 recovered above the upper control limit for trans-1,3-Dichloropropene, Carbon tetrachloride and Bromoform. Non-detections of the affected analytes are reported. Any detections are considered estimated.

Method 8260D: The continuing calibration verification (CCV) associated with batch 410-833147 recovered above the upper control limit for 4-Methyl-2-pentanone, Cyclohexane, 2-Hexanone and Acetone. Non-detections of the affected analytes are reported. Any detections are considered estimated.

Method 8260D: The following samples were diluted due to the abundance of target analytes: MW-77 (410-285561-8) and MW-64 (410-285561-11). Elevated reporting limits (RLs) are provided.

Method 8260D: The continuing calibration verification (CCV) associated with batch 410-863819 recovered outside acceptance criteria, low biased, for 4-Methyl-2-pentanone, 2-Hexanone, Chloromethane, Vinyl chloride, 2-Butanone, Methyl acetate and 1,2-Dibromo-3-Chloropropane. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Non-detections of the affected analytes are reported. Any detections are considered estimated.

Method 8260D: The following sample was analyzed outside of analytical holding time due to laboratory error: MW-76 (410-285561-9).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

PFAS

Method 1633A: Due to TSS greater than 50 mg/L when compared to a visual standard, the samples were spiked with extracted internal standards, shaken and centrifuged. The aqueous portion was decanted into the original container and extracted. The affected samples are MW-78C (410-285561-6), MW-35 (410-285561-14), PZ-5 (410-285561-15), PZ-8 (410-285561-16), MW-80A (410-285561-17) and MW-80B (410-285561-18).

Method 1633A: Due to TSS greater than 50 mg/L when compared to a visual standard, the samples were spiked with extracted internal standards, shaken and centrifuged. The aqueous portion was decanted into the original container and extracted. The affected samples are MW-58B (410-285561-21), MW-84A (410-285561-24), MW-84B (410-285561-25), MW-84B (410-285561-25[MS]), MW-84B (410-285561-25[MSD]) and Duplicate 1 (410-285561-26).

Method 1633A: The recovery for labeled isotope: 13C3-3:3 FTCA is outside the QC acceptance limits in the opening and closing continuing calibration verification standard associated with the following samples MW-57C (410-285561-3), MW-78A (410-285561-4), MW-78B (410-285561-5), MW-78C (410-285561-6), Field Blank #1 (410-285561-7), MW-77 (410-285561-8), MW-64 (410-285561-11), MW-32 (410-285561-12), MW-33 (410-285561-13), MW-35 (410-285561-14), PZ-5 (410-285561-15), PZ-8 (410-285561-16), MW-80A (410-285561-17), MW-80B (410-285561-18) and MW-80C (410-285561-19), biased high. Since the recovery for target analytes is within the limits, the data is reported.

Method 1633A: The labeled isotopes 13C3-3:3 FTCA are outside QC acceptance limits. Since the recovery in sample MW-78B (410-285561-5), Field Blank #1 (410-285561-7), MW-32 (410-285561-12) and MW-80C (410-285561-19) is less than 200%, the data is reported.

Method 1633A: The recovery for labeled isotope(s) 13C3-PFDoS were outside QC acceptance criteria in samples MW-78C (410-285561-6), MW-35 (410-285561-14), PZ-8 (410-285561-16) and MW-80B (410-285561-18). Since the labeled isotope recoveries were greater than or equal to 5% and the signal to noise was greater than 10:1, therefore, the data is reported.

Method 1633A: The transition mass ratio for Perfluorooctanesulfonic acid (PFOS) in sample MW-64 (410-285561-11), MW-35 (410-285561-14) and PZ-8 (410-285561-16) in analytical batch 410-832377 was outside of the established ratio limits. However, analyst judgment was used to positively identify the analyte. The analyte is flagged appropriately to identify this exceedance.

Method 1633A: The transition mass ratio for Perfluorodecanoic acid (PFDA) in sample MW-80A (410-285561-17) in analytical batch 410-832377 was outside of the established ratio limits. However, analyst judgment was used to positively identify the analyte. The analyte is flagged appropriately to identify this exceedance.

Method 1633A: The LCS/LCSD/LLCS labeled isotope(s) 13C5 PFPeA, 13C5 PFHxA, 13C4 PFHpA and 13C3-3:3 FTCA recovery associated with samples: MW-57A (410-285561-1) and MW-57B (410-285561-2) is outside the QC acceptance limits. Since the recovery for target analytes is within the limits, the data is reported.

Method 1633A: The recovery for a target analyte(s) 4,8-Dioxa-3H-perfluorononanoic acid (ADONA) and 3-Perfluoropentylpropanoic acid (5:3 FTCA) in the low laboratory control spike samples associated with the following samples: MW-57A (410-285561-1) and MW-57B (410-285561-2) is outside the QC acceptance limits. Since the recovery is high and the native analyte is not detected in the sample, the data is reported.

Method 1633A: The recovery for the labeled isotope(s) 13C5 PFPeA and 13C5 PFHxA in the method blank associated with samples: MW-57A (410-285561-1) and MW-57B (410-285561-2) is outside the QC acceptance limits. Since the recovery is high and the associated native analyte is not detected in the method blank, the data is reported

Method 1633A: Analyte Perfluorononanoic acid (PFNA) and Perfluorooctanesulfonic acid (PFOS) was marked as non-detect for sample MW-57B (410-285561-2) due to a detection below RL and failing ion ratio.

Method 1633A: The labeled isotopes 13C2 6:2 FTS are outside QC acceptance limits. Since the recovery in sample MW-57A (410-285561-1) is less than 350%, the data is reported.

Method 1633A: The labeled isotopes 13C2 6:2 FTS are outside QC acceptance limits. Since the recovery in sample MW-84A (410-285561-24) is less than 350%, the data is reported.

Case Narrative

Client: Groundwater & Environmental Services Inc
Project: GTAC-Bishop Tube HSCA Site

Job ID: 410-285561-1

Job ID: 410-285561-1 (Continued)

Eurofins Lancaster Laboratories Environment

Method 1633A: The transition mass ratio for Perfluorononanoic acid (PFNA) in sample MW-84A (410-285561-24) in analytical batch 410-833367 was outside of the established ratio limits. However, analyst judgment was used to positively identify the analyte. The analyte is flagged appropriately to identify this exceedance.

Method 1633A: The transition mass ratio for Perfluoroheptanoic acid (PFHpA) in sample Duplicate 1 (410-285561-26) in analytical batch 410-833367 was outside of the established ratio limits. However, analyst judgment was used to positively identify the analyte. The analyte is flagged appropriately to identify this exceedance.

Method 1633A: The recovery for a target analyte(s) 4,8-Dioxa-3H-perfluorononanoic acid (ADONA) and 3-Perfluoropentylpropanoic acid (5:3 FTCA) in the LCS/LCSD spike samples associated with the following samples: MW-57A (410-285561-1) and MW-57B (410-285561-2) is outside the QC acceptance limits. Since the recovery is high and the native analyte is not detected in the sample, the data is reported.

Method 1633A: The recovery for labeled isotope: d3-NMeFOSAA and 13C2 4:2 FTS is outside the QC acceptance limits in the opening instrument sensitivity check associated with the following samples MW-76 (410-285561-9). Since the recovery for target analytes is within the limits, the data is reported.

Method 1633A: The recovery for labeled isotope: 13C2 6:2 FTS and 13C2 8:2 FTS is outside the QC acceptance limits in the closing continuing calibration verification standard associated with the following samples MW-76 (410-285561-9), biased low. Since the recovery for target analytes is within the limits, the data is reported.

Method 1633A: The following sample was prepared outside of preparation holding time: MW-76 (410-285561-9). The client was contacted and the data is reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Question	Answer	Comment
The cooler's custody seal is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature acceptable, where thermal pres is required ($\leq 6^{\circ}\text{C}$, not frozen).	True	
Cooler Temperature is recorded.	True	
WV: Container Temp acceptable, where thermal pres is required ($\leq 6^{\circ}\text{C}$, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the containers received and the COC.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	False	Refer to Job Narrative for details.
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Is the Field Sampler's name present on COC?	True	
Sample custody seals are intact.	True	
VOA sample vials do not have headspace $> 6\text{mm}$ in diameter (none, if from WV)?	True	

ANALYTICAL REPORT

PREPARED FOR

Attn: Mr. Tim Uhler
Groundwater & Environmental Services Inc
410 Eagleview Boulevard
Suite 110
Exton, Pennsylvania 19341-2577

JOB DESCRIPTION

GTAC-Bishop Tube HSCA Site

JOB NUMBER

410-285777-1

Eurofins Lancaster Laboratories Environment Testing, LLC

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Authorization

Authorized for release by
Amek Carter, Project Manager
Loran.Carter@et.eurofinsus.com
(717)556-7252

Generated
6/15/2026 11:29:32 AM

Compliance Statement

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
 - Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
 - Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
- Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Job ID: 410-285777-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
^c	CCV Recovery is outside acceptance limits.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
B	Analyte was found in the blank.
cn	Refer to Case Narrative for further detail
E	Result exceeded calibration range.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

LCMS

Qualifier	Qualifier Description
*5-	Isotope dilution analyte is outside acceptance limits, low biased.
cn	Refer to Case Narrative for further detail
I	Ion ratio outside limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Job ID: 410-285777-1

Eurofins Lancaster Laboratories Environment

Job Narrative 410-285777-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt

The samples were received on 5/29/2026 6:07 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 5.1°C.

GC/MS VOA

Method 8260D: The method blank for 410-834006 contained 1,2,4-Trichlorobenzene above the method detection limit (MDL). Associated samples were not re-analyzed because the method blank results were less than the reporting limit (RL).

Method 8260D: The continuing calibration verification (CCV) associated with batch 410-834116 recovered above the upper control limit for 4-Methyl-2-pentanone, 2-Hexanone, Acetone and 2-Butanone. Non-detections of the affected analytes are reported. Any detections are considered estimated.

Method 8260D: The reporting limits for the GC/MS volatile compounds were raised because sample dilution was necessary to bring target compounds into the calibration range of the system. The associated samples on 410-834116 are: Duplicate #2 (410-285777-11).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

PFAS

Method 1633A: Due to TSS greater than 50 mg/L when compared to a visual standard, the samples were spiked with extracted internal standards, shaken and centrifuged. The aqueous portion was decanted into the original container and extracted. The affected samples are MW-42 (410-285777-4), MW-45B (410-285777-7) and Duplicate #2 (410-285777-11).

Method 1633A: The recovery for labeled isotope(s) ¹³C₃-PFDoS were outside QC acceptance criteria in sample MW-42 (410-285777-4). Since the labeled isotope recoveries were greater than or equal to 5% and the signal to noise was greater than 10:1, therefore, the data is reported.

Method 1633A: The transition mass ratio for Perfluorononanoic acid (PFNA) in sample MW-42 (410-285777-4) in analytical batch 410-833834 was outside of the established ratio limits. However, analyst judgment was used to positively identify the analyte. The analyte is flagged appropriately to identify this exceedance.

Method 1633A: Analyte Perfluoroundecanoic acid (PFUnA) was marked as non-detect for sample MW-38 (410-285777-5) due to a detection below RL and failing ion ratio.

Method 1633A: Analyte Perfluorononanoic acid (PFNA) was marked as non-detect for sample MW-45B (410-285777-7) due to a detection below RL and failing ion ratio.

Method 1633A: The transition mass ratio for Perfluorooctanesulfonic acid (PFOS) in sample MW-45A (410-285777-6) and MW-45C (410-285777-8) in analytical batch 410-833834 was outside of the established ratio limits. However, analyst judgment was used to positively identify the analyte. The analyte is flagged appropriately to identify this exceedance.

JOB DESCRIPTION

GTAC-Bishop Tube HSCA Site

JOB NUMBER

410-286100-1

Eurofins Lancaster Laboratories Environment Testing, LLC

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Authorization

Generated
6/23/2026 3:55:26 AM

Authorized for release by
Amek Carter, Project Manager
Loran.Carter@et.eurofinsus.com
(717)556-7252

Compliance Statement

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
 - Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
 - Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
- Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
^c	CCV Recovery is outside acceptance limits.
cn	Refer to Case Narrative for further detail
FH	MS and/or MSD recovery above control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.

HPLC/IC

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

LCMS

Qualifier	Qualifier Description
*5+	Isotope dilution analyte is outside acceptance limits, high biased.
^c	CCV Recovery is outside acceptance limits.
cn	Refer to Case Narrative for further detail
F2	MS/MSD RPD exceeds control limits
FL	MS and/or MSD recovery below control limits.
I	Ion ratio outside limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
cn	Refer to Case Narrative for further detail
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Client: Groundwater & Environmental Services Inc
Project: GTAC-Bishop Tube HSCA Site

Job ID: 410-286100-1

Job ID: 410-286100-1

Eurofins Lancaster Laboratories Environment

Job Narrative 410-286100-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt

The samples were received on 6/1/2026 5:15 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 3.3°C and 4.5°C.

Receipt Exceptions

The container label for the following sample did not match the information listed on the Chain-of-Custody (COC): Field Blank (410-286100-20). The container labels list Field Blank 2, while the COC lists Field Blank.

GC/MS VOA

Method 8260D: The continuing calibration verification (CCV) associated with batch 410-830737 recovered outside acceptance criteria, low biased, for Trichlorofluoromethane. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Non-detections of the affected analytes are reported. Any detections are considered estimated.

Method 8260D: The continuing calibration verification (CCV) associated with batch 410-833919 recovered above the upper control limit for Methylcyclohexane, Freon 113 and 2-Butanone. Non-detections of the affected analytes are reported. Any detections are considered estimated.

Method 8260D: The continuing calibration verification (CCV) associated with batch 410-834116 recovered above the upper control limit for 4-Methyl-2-pentanone, 2-Hexanone, Acetone and 2-Butanone. Non-detections of the affected analytes are reported. Any detections are considered estimated.

Method 8260D: Surrogate recovery for the following sample was outside control limits: MW-51B (410-286100-17). Sample not rerunning due to large target peak that could damage the instrument if rerun.

Method 8260D: The continuing calibration verification (CCV) associated with batch 410-834138 recovered outside acceptance criteria, low biased, for Bromomethane, Chloromethane, Vinyl chloride, Trichlorofluoromethane, Dichlorodifluoromethane and 1,2-Dibromo-3-Chloropropane. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Non-detections of the affected analytes are reported. Any detections are considered estimated.

Method 8260D: The continuing calibration verification (CCV) associated with batch 410-834952 recovered above the upper control limit for Carbon tetrachloride, 1,1,1-Trichloroethane and Bromoform. Non-detections of the affected analytes are reported. Any detections are considered estimated.

Method 8260D: The continuing calibration verification (CCV) associated with batch 410-834952 recovered outside acceptance criteria, low biased, for 4-Methyl-2-pentanone, 2-Hexanone, Chloromethane, 2-Butanone and Methyl acetate. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Non-detections of the affected analytes are reported. Any detections are considered estimated.

Method 8260D: The method requirement for no headspace was not met. The following volatile samples were analyzed with headspace in the sample container(s): MW-51A (410-286100-16) and Field Blank (410-286100-20). Headspace was observed at the time of analysis.

Method 8260D: The method requirement for no headspace was not met. The container (s) used for reanalysis of the following samples contained headspace: MW-15 (410-286100-10) and MW-28B (410-286100-13). The sample container was received

without headspace.

Method 8260D: The method requirement for no headspace was not met. The container (s) used for reanalysis of the following sample contained headspace: MW-79A (410-286100-18). The sample container was received without headspace.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

PFAS

Method 1633A: Due to TSS greater than 50 mg/L when compared to a visual standard, the samples were spiked with extracted internal standards, shaken and centrifuged. The aqueous portion was decanted into the original container and extracted. The affected samples are MW-82B (410-286100-3), MW-60 (410-286100-4), MW-50A (410-286100-5), MW-50B (410-286100-6) and MW-14 (410-286100-9).

Method 1633A: Based on the re-extraction comment, a reduced aliquot was used for the extraction of samples MW-81 (410-286100-1), MW-81 (410-286100-1[MS]) and MW-81 (410-286100-1[MSD]). Reporting limits have been raised accordingly.

Method 1633A: The recovery for labeled isotope: 13C2 4:2 FTS is outside the QC acceptance limits in the opening calibration verification standard associated with the following samples MW-82A (410-286100-2), MW-82B (410-286100-3), MW-60 (410-286100-4), MW-50A (410-286100-5), MW-50B (410-286100-6), MW-49A (410-286100-7), MW-49B (410-286100-8), MW-14 (410-286100-9), MW-15 (410-286100-10), MW-28A (410-286100-11), Duplicate 3 (410-286100-12), MW-28B (410-286100-13), MW-28C (410-286100-14), MW-52 (410-286100-15), MW-51A (410-286100-16), MW-51B (410-286100-17), MW-79A (410-286100-18), MW-79B (410-286100-19) and Field Blank (410-286100-20), biased low. Since the recovery for target analytes is within the limits, the data is reported.

Method 1633A: The recovery for labeled isotope: 13C2 4:2 FTS is outside the QC acceptance limits in the opening continuing calibration verification standard associated with the following samples MW-28C (410-286100-14), MW-52 (410-286100-15) and MW-51A (410-286100-16), biased low. Since the recovery for target analytes is within the limits, the data is reported.

Method 1633A: The recovery for labeled isotope: 13C2 4:2 FTS and 13C2 6:2 FTS is outside the QC acceptance limits in the opening continuing calibration verification standard associated with the following samples MW-82A (410-286100-2), MW-82B (410-286100-3), MW-60 (410-286100-4), MW-50A (410-286100-5), MW-50B (410-286100-6), MW-49A (410-286100-7), MW-49B (410-286100-8), MW-14 (410-286100-9), MW-15 (410-286100-10), MW-28A (410-286100-11), Duplicate 3 (410-286100-12), MW-28B (410-286100-13), MW-51B (410-286100-17), MW-79A (410-286100-18), MW-79B (410-286100-19) and Field Blank (410-286100-20), biased low. Since the recovery for target analytes is within the limits, the data is reported.

Method 1633A: The recovery for labeled isotope: 13C2 4:2 FTS and 13C2 6:2 FTS is outside the QC acceptance limits in the closing continuing calibration verification standard associated with the following samples MW-82A (410-286100-2), MW-82B (410-286100-3), MW-60 (410-286100-4), MW-50A (410-286100-5), MW-50B (410-286100-6), MW-49A (410-286100-7), MW-28C (410-286100-14), MW-52 (410-286100-15), MW-51A (410-286100-16), MW-51B (410-286100-17), MW-79A (410-286100-18), MW-79B (410-286100-19) and Field Blank (410-286100-20), biased low. Since the recovery for target analytes is within the limits, the data is reported.

Method 1633A: The recovery for labeled isotope: 13C2 4:2 FTS is outside the QC acceptance limits in the closing continuing calibration verification standard associated with the following samples MW-49B (410-286100-8), MW-14 (410-286100-9), MW-15 (410-286100-10), MW-28A (410-286100-11), Duplicate 3 (410-286100-12) and MW-28B (410-286100-13), biased low. Since the recovery for target analytes is within the limits, the data is reported.

Method 1633A: Analyte 3-Perfluoropentylpropanoic acid (5:3 FTCA) was marked as non-detect for sample MW-79A (410-286100-18) due to a detection below RL and failing ion ratio.

Method 1633A: Analyte Perfluorodecanoic acid (PFDA) was marked as non-detect for sample MW-49A (410-286100-7) due to a detection below RL and failing ion ratio.

Method 1633A: The transition mass ratio for Perfluorononanoic acid (PFNA) in sample MW-82B (410-286100-3) in analytical batch 410-834336 was outside of the established ratio limits. However, analyst judgment was used to positively identify the analyte. The analyte is flagged appropriately to identify this exceedance.

Method 1633A: The transition mass ratio for Perfluorooctanesulfonic acid (PFOS) in sample MW-50A (410-286100-5) in analytical

Case Narrative

batch 410-834336 was outside of the established ratio limits. However, analyst judgment was used to positively identify the analyte. The analyte is flagged appropriately to identify this exceedance.

Method 1633A: The transition mass ratio for Perfluorodecanoic acid (PFDA) in sample MW-28A (410-286100-11) in analytical batch 410-834336 was outside of the established ratio limits. However, analyst judgment was used to positively identify the analyte. The analyte is flagged appropriately to identify this exceedance.

Method 1633A: The transition mass ratio for Perfluorodecanoic acid (PFDA) in sample Duplicate 3 (410-286100-12) in analytical batch 410-834336 was outside of the established ratio limits. However, analyst judgment was used to positively identify the analyte. The analyte is flagged appropriately to identify this exceedance.

Method 1633A: The LLCS labeled isotope(s) 13C3-3:3 FTCA recovery associated with sample: MW-81 (410-286100-1) is outside the QC acceptance limits. Since the recovery for target analytes is within the limits, the data is reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals

Method 6020B - Dissolved: The following samples were not filtered within 15 minutes of sample collection as required by the method: MW-14 (410-286100-9), MW-15 (410-286100-10), MW-28A (410-286100-11), Duplicate 3 (410-286100-12), MW-28B (410-286100-13), MW-28C (410-286100-14), MW-52 (410-286100-15), MW-51A (410-286100-16), MW-51B (410-286100-17), MW-79A (410-286100-18), MW-79B (410-286100-19) and Field Blank (410-286100-20). The sample(s) was filtered prior to analysis at the laboratory, and the results have been reported. This does not meet regulatory requirements.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Eurofins Lancaster Laboratories Environment Testing, LLC

Client Sample Results

Client: Groundwater & Environmental Services Inc
Project/Site: GTAC-Bishop Tube HSCA Site

Job ID: 410-286100-1

Client Sample ID: Field Blank

Lab Sample ID: 410-286100-20

Date Collected: 06/01/26 15:30

Matrix: Water

Date Received: 06/01/26 17:15

Method: EPA 1633A - Per- and Polyfluoroalkyl Substances by LC/MS/MS, 1633A (Continued)
