Narrative (continued):

Observations:

_____:

- There was a sock in the well that was installed Saturday 7/5/25 that replaced the previous one.
- The well was attempted to be gauged with the absorbent sock in, but it was not feasible.
- The sock was removed and was estimated to be about 80% saturated. The sock was placed in an orange bucket which also contained the absorbent boom that was removed on Saturday.
- There was a slight petroleum odor from the sock after it was removed.
- The interface probe was inserted into the well, but there was not water encountered to a depth of at least 92-feet bgs.
- A bailer attached to some string was put into the well to try to determine the depth to water. At least 150-feet of string was used, and groundwater was still not encountered.
- GES decided that they will come back later to try and gauge the well.

_____:

- A skimmer had been placed into the recovery well.
- After the skimmer was removed, I noticed that there was a LNAPL layer on the top.
- The skimmer was opened to let the water flow into a metal bucket. It was closed so that a LNAPL sample could be collected, then reopened to let the LNAPL flow into the bucket.
- The depth to water was gauged and the skimmer was replaced into the recovery well.

_____:

- A skimmer was present in the recovery well.
- The skimmer was removed and emptied into a separate bucket.
- The water was then gauged (the DEP interface probe was used) and the skimmer was replaced into the recovery well.

_____:

- The resident observed the gauging activities.

I departed the site at 11:05
